Well, I'm a non-US station and I can't really understand your point. I
sent in a copy of the front page of my passport. It contains my name,
address, date of birth and nationality, none of which is a great secret.
(In fact it's pretty much all on qrz.com, and aca.gov.au).

> Surely there are other ways they can verify my ID.

Make a suggestion and perhaps they'll consider it. I suppose a photocopy
of my radio license should be good enough; would you consider that
acceptable to you?

I'm replying to a couple messages here to reduce traffic.

> Well, I'm a non-US station and I can't really understand your point. I
> sent in a copy of the front page of my passport. It contains my name,
> address, date of birth and nationality, none of which is a great secret.
> (In fact it's pretty much all on qrz.com, and aca.gov.au).

All of my government issued ID (passport, drivers licence, military ID,
etc) contain name and address, as you say, but also other information
that could be used for nefarious purposes (such as identity theft).

To expect me to make a photocopy of this information and drop it in a
mailbox (from where it could be stolen), then to be passed through the
hands of a multitude of postal employees of two different countries (or
more for some DX stations) as well as ARRL employees, any of whom could
be unreliable (not likely, but possible), is ridiculous.

> Isn't that what your passport or any other ID was given to you for?

No. Government issued ID is generally issued for a very specific use. A
passport is to allow me to cross international borders - I'll show it to
customs and immigration officials, border guards, etc. A drivers licence
identifies me as being allowed to operate a motor vehicle; I'll show it
to traffic police, department of motor vehicle officials, etc.
Photocopying ID and mailing it to organizations like the ARRL was never
the intended purpose of these documents, and they have no business
having that information.

> Make a suggestion and perhaps they'll consider it. I suppose a photocopy
> of my radio license should be good enough; would you consider that
> acceptable to you?

They already want that in addition to the ID. I suggest that the
postcard method used for US stations could be used for any country that
has a database of licensed amateurs available.

Given the close relationship between ARRL and the major member societies of IARU, why wouldn't it be viable to set up a system that allowed non-US hams to do the verification process with their society as US hams do it with the ARRL? Unless there are privacy law issues with IARU societies' access to the government databases (I vaguely remember there used to be such a problem in Germany), this would address Brian's concern. To the extent that it imposed costs on the IARU society, they could charge for the service, or some sort of reimbursement mechanism could be worked out, since it would be very much in ARRL's interest to have more DX hams in the database, enhancing the flow of income from DXCC.

Since many of the rarer countries are activated by hams from developed countries, I think it follows that setting up a process like this would significantly improve the attraction of LotW for DXCC.

Correct, you will never convince the clueless and uncommitted, but education might make some hams aware of the need to enter the correct information.
Many Hams simply don't know their zone, section, etc. Listen to a contest weekend and you will hear some poor contester trying to explain the exchange format to a caller.

My favorite, from the SS, "I'm not a member of the ARRL, so I don't have a section".....

Jim

It's like every other thing in Amateur Radio (CW, ARES/RACES,
contesting, etc.,) ... those who are interested, will do it, those who
are not, won't. You won't magically make someone interested in
something they don't care about, no matter how loudly you "beat the
drum"! After a while, the rhythm gets boring and you start tuning it
out altogether.

Ron

So if you cross your borders and show your passport to foreign officials, and let them scan it and do with your passport whatever they want, what identity theft are you talking about?

BM> Photocopying ID and mailing it to organizations like the ARRL was
BM> never the intended purpose of these documents, and they have no
BM> business having that information.

Ah oh. Let's finish it with "...and they have no business having my QSOs in LoTW database." First of all, YOU need your QSOs to be placed in the LoTW, not them.

>> Make a suggestion and perhaps they'll consider it. I suppose a
>> photocopy of my radio license should be good enough; would you
>> consider that acceptable to you?

BM> They already want that in addition to the ID. I suggest that the
BM> postcard method used for US stations could be used for any country
BM> that has a database of licensed amateurs available.

It's been discussed many times on different reflectors earlier. LoTW staffers can't make everyone happy. You are afraid of identity theft, other guy hates snail mail in Internet era but does not care about what you're afraid of, third wants his dollars in envelopes, fourth admires paper cards, fifth wants the things never change and go "old fashiond way", etc.

Below WC1M's posting on the topic on the CQ-Contest reflector. It answers your last question.

Online confirmation of identity is a complex subject. In the security biz, we call it "authentication". The bottom line is that pure online authentication of identity is not possible without using certain special techniques. After all, anyone can logon to a website and claim to be someone else. You need something extra.

One way to do it is by asking the user for some piece of information that he/she, and only he/she, is supposed to know -- such as a social security number, driver's license, credit card number, etc. This is the method used by the online financial institutions you mention. It requires that they somehow know your identifying information. If they permit you to supply the information over the Internet, the system is not very secure -- as demonstrated by the escalating nightmare of identity theft.

A more secure method is to use an "out-of-band" (non-Internet) channel through which information can be passed. The channel is usually the mail or in-person. In other words, you have to either send the identifying information by mail, usually with your signature, or give it to them in person. Mail is less secure, of course, and neither method can resist determined attack. Still, it's better than pure online authentication. Once you send in the information, the rest of the transaction can take place over the Internet. This approach is more of a hassle, but you can't get the security without the hassle. This is a golden rule of security: there is a tradeoff between convenience and security (note this the next time you have to wait for screening before you get on an airplane.)

Note that LoTW probably wouldn't be able to use these methods due to restrictions on who can verify your social security number, credit card number, driver's license, etc.

For USA hams, LoTW uses the FCC database and U.S. Postal service as an out-of-band channel. The system relies on the fact that the address in the FCC database is the actual address of the person who holds the callsign and not the address of an identity impersonator. If not, then someone perpetrated a fraud on the U.S. Government -- which is a very low-probability event (most rational people wouldn't risk jail to get Honor Roll.) Once LoTW has the address, the password can be sent through the out-of-band channel (snail mail) to ensure that only the true holder of the callsign can get the certificate.

Unfortunately, the same method can't be used for non-USA hams because most DX licensing authorities do not maintain online callsign/address databases. LoTW therefore requires a copy of the license and a government-issued identification document to complete the identification. Although the license could be faked, in theory it is much harder to fake a government ID and is a serious crime in most countries. This reduces the probability of fraud. The copies must be mailed in, not scanned and e-mailed, to verify that they come from the DXCC entity in question.

No security system is perfect. However, LoTW has been designed to substantially reduce the probability of identity theft, to detect when it has occurred, and to recover (back out bogus data) when fraud is detected.

Incidentally, the 128-bit encryption channel you mention has nothing to do with verifying identity. It's used to prevent someone from eavesdropping on the connection and stealing your identification information, user ID, password, etc.

1402. Response eQSL vs LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-24 20:34:00 UTC
From: Ford Peterson
Topic: 1402 Message: 1402

With 20,000 Qs in my log, I thought it would be interesting to review the country results between the two services to see if any patterns in participation resulted.

LOTW reports 81 of my 265 countries confirmed. eQSL reports 75 countries confirmed.

38 of the 81 countries reported by LOTW as confirmed are unique to LOTW (e.g. not on eQSL). I attribute this to the lack of DX becoming AGed on eQSL. A similar problem may exist with the certificate process for DX at LOTW.

31 of the 75 countries reported by eQSL as confirmed are unique to eQSL. The two logs are identical in all respects (as far as the ADIF submitted).

So what countries and how many confirms were received by eQSL and not LOTW?

Andorra 1
Bahrain 1
Belize 1
Bosnia-Herzegovina 1
Bulgaria 1
Chile 1
Colombia 1
Costa Rica 1
Croatia 1
Cuba 1
Dominican Republic 3
Estonia 4
Grenada 1
Iceland 1
India 1
Jersey 1
Jordan 1
Kaliningrad 1
Latvia 2
Luxembourg 4
Marshall Island 1
Pakistan 1
Peru 1
Poland 8
Serbia and Montenegro 2
Slovak Republic 1
Tinidad and Tobago 1
Turks and Caicos 1
Ukraine 2
Uruguay 3
Venezuela 5

What is interesting is not so much the single 'uniques' to eQSL, but the prevalence of places like Poland with 8 confirms on eQSL and exactly zero on LOTW. Venezuela=5; Estonia=4; Luxembourg=4; Dominican Republic=3; Uruguay=3; Latvia=2; Serbia=2; Ukraine=2.

Is this a promotion problem or a 'process' problem?

I don't understand your question. That is the intended use of a passport. Mailing a copy to the ARRL is not, and is inappropriate use of a passport.

> Ah oh. Let's finish it with "...and they have no business having my

I'm not sure where you are going with this one either. I never said they had no business having my QSOs in their database - I said they have no business with my passport number or driver's licence number.

Oh - and I don't need my QSO's in LOTW. I don't chase awards. I'd like to put them there for people who do chase awards.

> It's been discussed many times on different reflectors earlier. LoTW

They can't make everyone happy, and I'm willing to accept some inconvenience - but the current system is unacceptable, in my opinion.

This may not even be legal in some countries. Over here, the military used to use social insurance numbers to uniquely identify people. Just about every piece of paperwork required it, if you went to the QM to draw equipment they would ask for it, etc. Some years ago we were all given "service numbers" that are now used for this purpose, because the use of social insurance numbers in this manner is illegal, because that is not the intended use of that information. I don't know what Canadian law says about other such information (such as passport and driver's licence numbers), and I don't know what the laws of other countries say, but it is plausible that some people may not be able to join LOTW without breaking the law. Even if it is legal, I do not feel it is appropriate.

> Below WC1M's posting on the topic on the CQ-Contest reflector. It
> answers your last question.

That doesn't answer my question. True, not all countries have online databases, but for those that do, the postcard system would work. For

those that don't, a copy of the radio licence should be sufficient. WC1M says "Although the license could be faked, in theory it is much harder to fake a government ID and is a serious crime in most countries." Um... gee, my radio licence *is* a government ID.

Look at my recent post "Response eQSL vs LOTW" earlier today.

I did some analysis of my LOTW log and compared it to the eQSL log in direct response to Brian's speculation. There are quite a few countries that are well represented in my eQSL log and not in or poorly represented in my LOTW log, even though they are identical logs. So my analysis DOES indicate that there may be a problem with hams from certain countries surrendering private information to obtain a certificate. If others could check their logs for countries like Argentina, Czech Republic, Estonia, Italy, Luxembourg, Poland, Slovenia, Venezuela, there is the possiblity that Brian's speculation that surrender of these documents is illegal in these countries.

Thanks for the comments Brian. We may be on to something here...

If you are concerned about misuse (although I don't know what use
ARRL or one clerk could make of them) of your social insurance,
driver's license, or passport number, BLACK THEM OUT of the photocopy.

ARRL need an independent document to verify the address and identity
of the amateur license. "At least Two independent sources" is a
standard level of verification for most commercial purposes.

The mere existence of a government issued identification with your
name, address, and photograph that matches the name and address on
the amateur license is a minimal imposition.

> True, not all countries have online databases, but for those that
> do, the postcard system would work.

How many countries have online databases that are maintained by
the licensing authorities and can legally be used by the general
public?

> For those that don't, a copy of the radio licence should be
> sufficient.

A copy of the radio license is not, by definition, sufficient.
The system requires verification and an amateur license is not,
by itself, verifiable. That is the very reason for the cross
check against the FCC database (in the case of US amateurs) or
a government issued ID (in the case of non-US licensees).

That's a good point. In Australia, banks require the equivalent of your passport AND your birth certificate in order to open an account. Those are commercial organisations without link to the government, so should they not ask for this information?

I think it would be fair to blank out your passport number in the photocopy, but the rest of the detail is nothing secret. (Name, address, birthdate, place of birth, nationality.)

Not likely ... including Luxembourg which is not a valid comparison since I only have one call "confirmed" by eQSL, only Argentina shows significant response via eQSL and not LotW. Even then, fewer than 25% of the Argentine stations from whom I have received eQSL "confirmations" are AG ... I would postulate that the issue is not a legal prohibition against copying the required documentation but either unwillingness or simple procrastination.

> Thanks for the comments Brian. We may be on to something here...

My response rate from Canadians is essentially the same on LotW and eQSL (about 5% of responses). I don't think most Canadians have a problem supplying the ARRL required documentation. What's your problem, Brian, eh?

Ah but there is the rub. Don't they need to surrender similar documents to eQSL? My analysis only included the AGed responses. Your includes the non-AGed responses as well. Give this one more look before we call it a dead horse.

You need to know before you blast LotW for not using that solution
for DX. In my experience, a great number of the country specific
"online callbooks" were maintained by clubs or even an individual.

It appears that even the Canadian database is maintained by RAC and
not Industry Canada ... at least the IC web pages refer the user
to RAC's web site. Under those conditions, the Canadian database,
while good, cannot be considered authoritative.

No, it is maintained by Industry Canada, it is just hosted on the web by
RAC. RAC gets a copy of IC's database once a day and makes it publicly
available, they have nothing to do with the actual data.

1414. LoTW and eQSL

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-25 05:05:30 UTC
From: NA4FM (Buck)
Topic: 1330 Message: 1414

I have been reading all the comments about the advantages of using eQSL or LoTW, and how important it is for others that I use them.

I took a few minutes to ponder the importance of my being a confirmed participant in each of the two programs, as well as for those I talk to. Then, add to my conclusions, the advantages or disadvantages of either one. The first consideration I have to make is that I currently log all my QSOs on a logbook program that can easily upload the log to either LoTW or eQSL. This, of course, means that once approved by each, it only takes a moment of my time each month to keep them updated.

eQSL offers awards that can only be earned by AG participants communicating with other AG participants, confirmed by the eQSL Logbook. In order to achieve these awards, I must be AG and I must upload my log. Also, others with whom I contact must also be AG and confirm my eQSLs. Without participation from both myself and enough of my contacts, there is no way I may receive any of these awards.

LoTW offers no awards that I am aware of. It is an alternative method of confirming QSOs, and, as far as I can tell, nothing more. I do not know of any ARRL award that requires participation in LoTW.

How does my participation help others in these programs? With eQSL, others cannot use my contact to achieve awards unless I am AG and confirm their contacts. With LoTW, my contacts can participate in any League award without my participation in LoTW.

I haven't heard of any arguments on behalf of me or other stations participation in LoTW as being essential actually holding water. The biggest argument seems to be related to DX contacts. Before I was a League member, I was unable to use the bureau, but I have had and can QSL direct in many cases. For domestic contacts and awards, I QSL direct to almost all first-time QSOs and absolutely to every one who sends me a QSL first. Many times I send QSLs first, and in most cases, I receive a card in return. In a very few cases I receive a card in an envelope with a notice that "It is customary to send a self-addressed stamped envelope with each card in which you would like a card in return." or something to that effect. In a few cases I don't receive a card. If I don't and need it, or if it is a special event station or a station at the bottom of a pileup(the station everyone is piling up to contact), I send an SASE with a QSL card. Regardless of one's situation, if a person with whom I have had QSO sends me a card, emails me or eQSLs me and requests a hard card, I send it. There may be times such as now, in which my time, budget, work, or just my dis-organization prevents me from responding more quickly, but I do respond to all requests.

While my return rate is close to 100%, I occasionally have to resend a card with an SASE or get a "no such name/address" or "deceased" stamp on the card. Rarely, I get a "I don't have you in my log" message and once I got a letter of explanation that I was talking to a bootleg station who was intentionally using his call to torment him. Three times I received a card from others stating that I was either a "poor control operator" or someone was bootlegging my call. (Three months later, a friend confessed to having fired up his old rig and using my call to test it to see if it worked.) But I have digressed here....

LoTW is nothing more than an alternative method of confirming QSOs. There is no award dependent on that service. eQSL is more than an alternative method of confirming QSOs. One of it's advantages is that it is easy to become AG, but its disadvantage is that it is poorly designed and requires a different account for each different call, it doesn't combine the different accounts well and it is pathetic when it comes to handling accounts where the operator is mostly mobile or has several operating locations from which they operate often. They do a really poor job of handling my method of operating and fulfilling my needs in a service. (this doesn't make them overall bad as many others are doing well with the service, but it does not work well for me at this time.) I once signed up with LoTW when it was in beta. They confirmed my license and then dumped all the data when they went live. Now I have tried several times to get reconfirmed. They send a card which I receive in about a week or so, which, as it happens, seems to always turn out, is when I am working again and don't have time to handle it until it expires. When it doesn't, I have to work with it for several hours, complain that it doesn't work and get the answer after the expiration of the card and the process starts all over again.

All this and for what advantage? None, really. I would like to get re-confirmed when I have time to fool with it again, but I don't see it being a priority any more. It really does no one any good whether or not I use LoTW.

This is not intended as a message to bash LoTW, eQSL, the ARRL, or even the stations that don't reply without an SASE or don't reply at all. (please don't hijack the thread with these off-topics.) This is just the way I see things. I sat down and took a serious look at how either service would or could benefit me or the people I have QSO with and this is my conclusion.

This doesn't mean it isn't important to those of you who are DX chasers, can't or won't afford to send cards, or who are in any way dependent on or happy with using either of these services to accomplish your goals.

For what it's worth,
Buck

I am a county hunter. I have posted a message on my QSL cards
requesting the station identify his county (assuming he was home) and
yet I receive very many cards where that request is overlooked and
pre-printed cards without that information.

There is another option, send the station a physical card and letter
requesting the information and/or hard card. It might work.

Just a thought,

Hello Brian,

Thursday, June 24, 2004 Brian Mury wrote to ARRL-LOTW@yahoogroups.com:

>> So if you cross your borders and show your passport to foreign
>> officials, and let them scan it and do with your passport whatever
>> they want, what identity theft are you talking about?

BM> I don't understand your question. That is the intended use of a
BM> passport. Mailing a copy to the ARRL is not, and is inappropriate
BM> use of a passport.

Come on, this is ridiculous.

>> It's been discussed many times on different reflectors earlier. LoTW
>> staffers can't make everyone happy. You are afraid of identity theft,
>> other guy hates snail mail in Internet era but does not care about
>> what you're afraid of, third wants his dollars in envelopes, fourth
>> admires paper cards, fifth wants the things never change and go "old
>> fashiond way", etc.

BM> They can't make everyone happy, and I'm willing to accept some
BM> inconvenience - but the current system is unacceptable, in my opinion.

Since you have burned all the bridges behind you the only way I can
imagine for you to participate in the project is to ask canadian
government to issue you a special "VE7NGR LoTW ID". All we can do is
to wish you luck with that.

>> Below WC1M's posting on the topic on the CQ-Contest reflector. It
>> answers your last question.

BM> Um... gee, my radio licence *is* a government ID.

It is. Mine too, but it has no my face on it, and I can fake it much
easier than my passport. And no one take me to the jail if I fake my
license, but they will do that if I fake my passport.

Here's one more WC1M's postings on the subject. Note that:
"It's certainly possible that someone will find a security hole in
LoTW -- no system is perfect. Hopefully, the design is strong enough
that such a breach will be quickly detected and corrected. You can bet
that if this ever happens, loud voices will ask why the security was
not made stronger."

A few opinions of my own (not necessarily ARRL's):

First of all, LoTW is not more strict than most well-engineered online financial systems. The person who wrote that was mistaken.

Second, although I am certainly biased on this subject, I would not characterize LoTW's security system as obsessive. In designing LoTW, ARRL understood that amateur radio is a hobby. However, many holders of DXCC and Honor Roll take the program very, very seriously. In some cases it has taken 20 years or more and hundreds or thousands in postage to attain the top awards. For decades, DXCC has meticulously checked licenses and other authentication documents for rare DX QSLs, adding significant time and cost to the program. The Honor Roll listings continue to be sorted by deleted countries because there would be a gigantic outcry if only current countries were used (resulting in no "first place".) Past attempts to defraud DXCC (e.g., Don Miller, Romeo, etc.) have resulted in cries for blood. It's not a stretch to say that some hams care as much about the integrity of DXCC as they care about money (well, almost... ;-)

So, it was very important to protect the integrity of DXCC and LoTW. Online systems are different in that they permit a much broader level of fraud than manual or paper-based systems. There is no question that among the million or more hams in the world, some bad apples will try to cheat the system -- to gain an undeserved award, to embarrass the sponsor or simply out of sheer malice. If the system can be compromised in such a way that the participants lose confidence in its integrity, then the program will collapse.

It's certainly possible that someone will find a security hole in LoTW -- no system is perfect. Hopefully, the design is strong enough that such a breach will be quickly detected and corrected. You can bet that if this ever happens, loud voices will ask why the security was not made stronger. The answer will be that it could have been made even stronger, but there would have been too large a price to pay in terms of usability. The present system balances the ever-conflicting properties of security and convenience fairly well. Hopefully, a one-time inconvenience for authentication will pay dividends in decades of hassle-free QSLing and awards submission.

The countries you asked about were those from which I had multiple
LotW confirmations. I merely pointed out that even though I had
no LU confirmations on LotW, the majority of the LU stations on
eQSL (in my log) were not AG. I still had multiple AG LU stations
although they were far from the majority.

If, as you proposed, the problem were a legal prohibition on
copying the required identification documents, I would have
no LotW confirmations from those countries you listed.

I believe the problem with DX adoption of LotW is nothing more
that distance and a terrible lack of marketing by the ARRL staff.
I don't know if they did it ... but someone representing LotW
should be in Friedrischafen this weekend to explain the system
and verify documents on the spot. ARRL, through the IARU should
be working on a system to establish "regional registrars" from
among the larger societies to verify documents and register
participants. Those two steps, along with "how to" articles
in the non-English amateur publications would go a long way
toward increasing participation in LotW.

Buck, ARRL has linked LotW to DXCC, and makes it possible for people applying for DXCC credits to use LotW confirmations in lieu of QSLs. That's enough for me to feel that I should upload all my logs to LotW, which I have done (77K QSOs). I don't chase DXCC, but a lot of others do, and they can now use QSOs with me for DXCC whether or not they have received a card. Hopefully, other ARRL awards will have similar links before long, and ARRL is in touch with other major award sponsors to work out similar arrangements.

BM> eQSL requires a phtocopy or scan of the radio licence only.

If you are an US call holder and want to operate from CEPT countries,
you must have both your license and passport in hand. So as you can
see, CEPT countries have the same ID requirements like LoTW staff.

Two of the last posting on the reflector were the most interesting.

Joe suggested that the ARRL could/should (maybe they have and I'm not aware) send representatives to the various other ham conventions Fsh in Germany, Seanet, come to mind. What a great opportunity to fully explain in a face to face setting, the full details of LoTW and possibly as Joe suggested, 'certify' users on the spot.
I was a bit surprised that ARRL did not have a LoTW info booth at Dayton.

The other comment was that someone who doesn't chase awards, realizing that others do, will upload his logs for the benefit of those award chasers.
That was the 'Ham Spirit' I remember seeing and benefited from as a Novice and later.

Even though I live in one of the most populated counties, Cook; I occasionally get a qsl request including a note.
"Pse QSL, for my first Cook County qso".

I reply as fast as my arthritic fingers can fill out the card and I can crawl to the mailbox.

I've uploaded over 141K qso's. I will feel very proud if one of those gives someone a Illinois state for WAS or a Cook County for the County Hunters.

(I'm aware WAS and County Hunting awards are not YET implemented via LoTW. But they will be.)

PS: I've also benefited from LoTW in receiving over 30 LoTW qsl's for band/mode credits I had been unsuccessful in obtaining hardcard qsl's for in the past.
If you consider that I will not have to try again for those qsl's, that should be about $60 minimum savings, about the cost of a nice meal out with the XYL.

I feel like I'm diagonally parked in a parallel universe.

> of confirming QSOs, and, as far as I can tell, nothing more. I do not
> know of any ARRL award that requires participation in LoTW.

You are correct, there is no ARRL award that requires participation
in LotW. However, unless you have a very large collection of QSLs
it will be to your advantage to participate if you are attempting
to qualify for any ARRL award.

> How does my participation help others in these programs? With LoTW,
> my contacts can participate in any League award without my
participation
> in LoTW.

Again, they can participate in the ARRL awards programs without your
participation in LotW. However, you must take the added time to
fill out a QSL and bear the expense of QSL printing, etc.

Some time ago I did an analysis of the cost of getting a traditional
"paper" confirmation.

First, it costs you nothing to upload your log. Thus you immediately
save the cost of printing cards and the time necessary to answer QSL
requests for QSOs where you do not need the confirmation for an award.

If you are need the confirmation the cost difference is dramatic,
even the card comes from a US based manager. There are the costs
of printing a card, envelopes, postage, labels, etc.

For a US station to a US manager I figure the cost:

Low High
QSL Card $0.04 $0.25
Labels (QSO/address) .01 .10
Envelopes (2) .15 .15
Printer consumables (?) .05 .05
Postage (SASE) .74 .74
------ -----
Total: $0.99 $1.29

If the station has no US manager, outbound postage is $0.80 and
the return postage will be $2.00 (or 1 - 2 IRC) in most cases.
That makes the cost of a single card sent to the UK, Russia, etc.
between $3.05 and $3.50.

Let's look at bureau QSLing: If one is not sending cards by
the pound, the bureau fees are $0.10 each. 10 cards should

fit in a 2 oz. first class letter ... the postage is $.60. The postage for getting cards from the incoming bureau will be about $0.60 per ten cards. The cost of envelopes (three) will be around $0.30. For the round trip, a "bureau card" will cost between $0.45 and $0.65 each (and take perhaps a year or more).

Based on those numbers, obtaining the confirmations for a basic DXCC would cost about $100 using traditional cards. Using LotW the cost for the "credits" would be $20.00 (100 LotW "credits" @ $0.20 each). LotW confirmations for 5BDXCC would cost $75.00 vs. nearly $500 for "paper" confirmations.

There are significant savings of both time and money for all LotW users ... a semi-active station might save $100 or more a year in reduced printing, postage, and bureau charges for unneeded QSLs.

73,

My local club used my call for Field Day. I would like to upload these contactS to LOTW but I dont want to mix them with my regular log. I have created certificates for 2 old calls but haven't used them yet. Seems like I saw there was an issue with LOTW for county hunters using call like W1ABC/COUNTY... Ideally I would like to had a log for something like N4LR/FD2004..

Can this be done.

P.S.

Using my normal certificate with a date range of 2 days wouldn't be a good solution. When I deal with data I would probably forget to exclude those dates.

It can be done but the other stations wanting confirmation would
need to upload their QSOs with you as N4LR/FD2004.

I don't know of a good way to keep those QSOs separate.

Hi Joe,

I was justing looking over the FAQ. Its been awhile since I've
read it. It kinda sounded like the location field would be good but
it's not available on the web query options so it wouldn't work.

I just don't want credit for contest qso's I didn't make. They
weren't even made from my home qth. BUT they are legitimate qso's
that I would like to confirm for anyone who needs it.

You could create a separate "location" and sign them with that
location but you're correct, I don't see any way to separate it
out on the web query. Did the Field Day operation, perhaps, take
place in a different county? That location marker might allow
filtering in our own log (some logs keep track of multiple
locations, e.g., "rover" operations) and you could exclude those
QSOs when applying for any awards.

Here's what I do.

Since our FD site is a seperate location from my home QTH, I have a certificate just for that location (I'm in NC, but our FD site and VHF contest site is on a mountain in VA).

It still lets others get credit (primarly for WAS and VUCC when those awards become available via LoTW).

As we've all noticed by now LoTW seems to have a lot more participation from U.S. stations then from DX. In fact most of the DX QSO's I have confirmed via LoTW are U.S Licensees working portable in another Entity.

Out of curiosity I recently sorted my logbook to show me only the QSO's that were with US stations operating from a DX location, that are not yet confirmed via LoTW. (e.g. VP5/K8KWT). Then using the "Find Call" function in the LoTW website I checked many of the U.S. stations calls to see if they had made a submission with their home call (e.g. worked VP5/K8KWT checked K8KWT). I was amazed at the high percentage of Stations that have uploaded logs from home but not from the DX location.

Most of these are RTTY QSO's with guys in the Caribbean or Pacific Islands.

What are you waiting for guys !!

Just because those Entities are not on the Ten Most wanted list doesn't mean that someone out there doesn't need it for a new band counter.

I'd love to see a few "easy" ones added to my numbers. Especially on 40/80 meters. That would be less cards for me to package up to send to Newington.

It's also not quite as easy for the DXers to get involved.

I must be missing something but it doesn't appear to me that the ARRL is out marketing the system. I would think they would announce at all of the big hamfast (Both EU and Asia) that they will have a rep there (I think they usually do) and you should bring your documentation and get on the spot sign up.

Jim,

I've had good and fast answers to some questions, other nothing.

This is the one I've sent 3 times:

Gerry,

VE6LB/VA6XDX
(403)251-0384
ve6lb@...
http://www.qsl.net/ve6lb/

==========
to: lotw-help@...

This is a message I sent to the reflector on June 12th.

I expected that the records would be synchronized by this morning at the latest.

Is this a problem or am I just not understanding the data presented?

Gerry VE6LB

Fellow Users,

You should be aware that there is a time delay in the Synchronization of the LoTW data base and your DXCC credit records. I've been told that this happens nightly so in the interim between when a new credit appears on the LoTW system and it's validated against the DXCC records, it mat take upwards of a day.

As an example:

Today a LoTW RTTY confirmation appeared for CX2AQ. This shows as a "selected" QSO in the awards section of LoTW but when one looks at the DXCC record under "view award credit matrix", my record show this as a confirmed credit.

I expect tomorrow morning it will all be as it should be.

Folks,
Concerning the "selling of LOTW", I brought this up quite a while ago.
Apparently thay are doing this to some extent. Wayne was at HAM-COM
in Arlington a couple of weeks ago and did in fact put on a program about it.
Unfortunately I missed it.
Just as we had to be patient for LOTW to come alive, then had to be patient to see the awards program start up...I guess we have to be patient with th eDX stations. Hopefully they will join in. I've had some pretty rare stuff come through so far.
Concerning the help...early on I had a problem, by my own hand, and Dave and Wayne both were very patient and helped me iron things out.
A phone call might get a quicker answer.
As for me, so far no real complaints, although I woyld like to see a bunch more confirmations myself.

I don't know what their staffing or workload is.
I've received fast answers to "critical" problems, i.e. my password stopped working due to the DXCC connection.

They should post a note "that due to workload they can only answer XYZ"

Jim

Jim,

I've had good and fast answers to some questions, other nothing.

1439. DX PARTICIPATION IN LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-02 22:16:31 UTC
From: WC7N
Topic: 1439 Message: 1439

I think the systems works great and only wish more DX stations were participating in it. I realize Green Stamps are a part of the problem but I believe that the ARRL sends reps to the big DX conventions in Asia and Europe and they could put out the word for those DXer to bring their documentation with them and the documentation could be inspected and they could be signed up on site with out mailing copies, etc to the ARRL.

Rod WC7N

1440. Re: Re: [ARRL-LOTW] What are you waiting for guys!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-02 22:42:13 UTC
From: Gerry
Topic: 1429 Message: 1440

Jim,

I agree, it would be nice to simply be told "we're busy and will get back to you some time".

I guess my issue, if it's real-not just my misreading of the reports, it is a serious problem. My LoTW credits are out of sync with my DXCC credits. I know the DXCC report is correct and I know the LoTW shows a "selected" QSO that reduced my "awarded" by 1. Unfortunately there doesn't appear to be a formal definition of "Selected" and Awarded". My assumption is "selected" means a New One (these appear in the Application form as available for submission) and "awarded" means applied to my DXCC records.

I've had this happen before and the DBs synchronized a few days later.

This appear to be caused by a station re-downloading their logs with duplicate QSOs in them and LoTW not looking at your DXCC record to validate that these are no longer needed. I had done a LoTW and a paper submission in May where this Country/mode was credited (from a LoTW QSL) to my DXCC.

Maybe someone can help clear this up.

Gerry,

Subject: Re: Re: [ARRL-LOTW] What are you waiting for guys!

I don't know what their staffing or workload is.
I've received fast answers to "critical" problems, i.e. my password stopped working due to the DXCC connection.

They should post a note "that due to workload they can only answer XYZ"

Jim

Jim,

I've had good and fast answers to some questions, other nothing.

This is the one I've sent 3 times:

Gerry,

VE6LB/VA6XDX
(403)251-0384
ve6lb@...
http://www.qsl.net/ve6lb/

==========
to: lotw-help@...

This is a message I sent to the reflector on June 12th.

I expected that the records would be synchronized by this morning at the latest.

Is this a problem or am I just not understanding the data presented?

Gerry VE6LB

Fellow Users,

You should be aware that there is a time delay in the Synchronization of the LoTW data base and your DXCC credit records. I've been told that this happens nightly so in the interim between when a new credit appears on the LoTW system and it's validated against the DXCC records, it mat take upwards of a day.

As an example:

Today a LoTW RTTY confirmation appeared for CX2AQ. This shows as a "selected" QSO in the awards section of LoTW but when one looks at the DXCC record under "view award credit matrix", my record show this as a confirmed credit.

I expect tomorrow morning it will all be as it should be.

But it is easy for US amateurs with DX calls to get involved. A significant percentage of registered DX are US call sign holders. For instance, of the 14 registered in Greece, I account for 2. Once I had N3JWJ in via post card, it was easy to add SV1/N3JWJ and J42004/N3JWJ for this year. (Much easier than eQSL by the way, but I get a much better return rate from eQSL so far.)

Forgive me if I have the wrong info.
Which Canadian org. administers the Worked all Canadian Provinces?
What are the requirements for Worked all VE provinces?
If there is a group, have they joined with LoTW to administer this certificate?

I probably do not have the cards, but I'm sure I've worked them all on most bands.

As always, please and thank you.

I used to have an open mind but my brains kept falling out.

Well, Darrell N3JWJ seems to have understood what I was trying to say with my original message on this Thread. What I was getting at is that there are a bunch of U.S. stations out there that have used LoTW with their U.S. Call sign. But, when they sign portable from another Entity... nothing. Since they use LoTW for the home U.S. Call they obviously are aware that LoTW exists, so it isn't a matter of selling LoTW to them. That's why I asked what they were waiting for. From what I've read on this site getting a Certificate for a DX call once you have your U.S. Call Certificate is as easy as adding an old Callsign.

Obviously a lot of U.S. Stations operating portable from another entity do use LoTW for both the home call and the DX Call. If they didn't I wouldn't have half as many DX confirmations as I do now. I was just surprised by how many U.S. Stations operating portable from another entity use LoTW for only the home call but not the DX Call.

If it was rare DX I could believe that they were looking for $$$. But common Caribbean and Pacific Islands ... I don't think so. I get the feeling that they don't think anyone really needs them. It is probably true that they wouldn't be New Entities for many folks, but they would probably give a lot of folks band fills. So if any of you guys out there are reading this PLEASE Upload your DX logs. Somebody is bound to need a band fill.

That said I have to agree with those that have made the observation that the ARRL hasn't made much effort in "Selling" LoTW. Heck at Dayton they seemed darn near embarrassed to even talk about it. I couldn't believe it when I was told by an ARRL staffer that it never

occurred to them to have a LoTW booth set up. DOH!!!!

Hi Bob,

LOTW is a piece of cake to use, both for my home call and my DX calls. Most of my off-shore operating has been in the Caribbean. I am still surprised how many green stamps I get for QSL's. But, it doesn't cover expenses. In fact, I'm still surprised how many QSL's I still get from the bureau too. So, not sure why more don't upload their logs to LOTW

1451. IOTA numbers

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-12 03:47:09 UTC
From: Art RX9TX
Topic: 1451 Message: 1451

Hello Arrl-lotw,

I'm using Logger32 free (and definitely the best :-)) logging
software, and when I synchronize my log with LoTW ADIF-report file,
logger places some QSOs to "bad" file with the notices like this:

Error in the IOTA field ....

<APP_LoTW_OWNCALL:5>RX9TX
<CALL:6>7L4IOU
<BAND:3>15M
<MODE:4>RTTY
<QSO_DATE:8>20040613
<TIME_ON:6>072354
<QSL_RCVD:1>Y
<QSLRDATE:8>20040711
<DXCC:3>339
<CQZ:2>25
<ITUZ:2>45

<IOTA:5>AS007

<GRIDSQUARE:4>PM95
<eor>

This is really annoying, and could be easily solved.

The reason is that there IS some sort of STANDARD for IOTA number (if
you do believe, just go to http://www.rsgbiota.org IOTA website and
see how they do spell them), IOTA number in ADIF file should look like
<IOTA:6>AS-007.

So my request to place a notice for operators about correct spelling
of IOTA numbers, on the LOTW web page, or inside TQSLcert application,
it does not a matter. If any of LoTW staffers read this reflector, of
course.

From: Dave Bernstein
Topic: 1451 Message: 1452

Expecting users to conform to predefined formats in order to make life easier for computer programs is ass backwards. The code to interpret all of the reasonable variations of IOTA tags -- AS7, AS-7, AS07, AS007, AS-007, etc. -- takes about 5 minutes to write.

A> possibly responsible for. At the end of the day, this is what all
A> the specs are written for - for everybody to comply.

:-) Who is responsible, logging software developers or IOTA operators,
you can argue directly to Dave AA6YQ. When you both come to one
opinion, let me know so I can ask for needed enhancements in the right
place :-)

Which is actually an indictment of both Logger and LotW. DXKeeper won't let
a user make that mistake.

Neither will Logger32, so it's certainly not an indictment of Logger32.

From: Dave Bernstein
Topic: 1451 Message: 1456

I suspect that most of the ADIF-incompliant IOTA tags are being
generated by TQSL when a new location is created.

73,

Dave, AA6YQ

In fact, that seems to be the only place that one can enter the
IOTA, grid, etc. tags. If the user does not enter properly
formatted data, LotW will happily pass along the improperly
formatted (or incorrect) data.

Unfortunately, tQSL needs better data validation routines ...
GIGO as always.

1459. Re: IOTA numbers

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-13 02:56:30 UTC
From: Dave Bernstein
Topic: 1451 Message: 1459

My understanding of Art's post is that his logging application was rejecting QSLs downloaded from LotW during the synchronization process because they contained invalid IOTA tags. I suspect that TQSL is the source of these invalid tags; as Joe K4IK pointed out, it seems to pass on whatever the user places in its IOTA textbox without ensuring that the tag is in XX-NNN format. There is a similar problem with CQ and ITU zones, which should be checked for reasonability with respect to the DXCC entity; this would prevent most of the "zone reversal" cases we've all observed.

1460. Re[2]: [ARRL-LOTW] Re: IOTA numbers

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-13 04:30:26 UTC
From: Art RX9TX
Topic: 1451 Message: 1460

Hello Brian,

Tuesday, July 13, 2004 Brian Mury wrote to ARRL-LOTW@yahoogroups.com:

BM> Neither will Logger32, so it's certainly not an indictment of
BM> Logger32.

That was my fault, as I did not notice last ver of L32 already can handle wrong IOTA number formats. Anyway, from my point of view, any user data entered to TQSLcert application should be checked by the application for ADIF, DXCC, WAZ or whatever compliance.

>> Which is actually an indictment of both Logger and LotW. DXKeeper
>> won't let a user make that mistake.

>> Expecting users to conform to predefined formats in order to make
>> life easier for computer programs is ass backwards. The code to
>> interpret all of the reasonable variations of IOTA tags -- AS7,
>> AS-7, AS07, AS007, AS-007, etc. -- takes about 5 minutes to write.

1461. iota numbers, grids, zones

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-13 11:07:45 UTC
From: FireBrick
Topic: 1461 Message: 1461

I agree that the info being entered to LoTW in correct format is a problem.
Canadian Provinces being returned as 'States' also should be addressed.

But just for a moment look at this.

One of the big complaints is that there are not enough Non USA contributors.

When you 'Sign' a log, errors in time frame are rejected.
As a manager who uploaded LARGE numbers of logs, I frequently encountered data entry errors.
I transposed a date, or typed a 'OH' for a "ZERO", or even an a incorrect call sign.
(some of these were due to the incorrect deciphering of the handwriting)

These errors would pop up during the signing process.
I would then have to take the error report, compare it the log, find/fix the error, remake a .adi file with the corrections and then 're-sign' and upload the corrected file.

I can see where this process could be frustrating to a non English speaking contributor.
The addition of error checking for iota, and zones, could really add to the confusion.

Part of the zone problem is that the certificate process asks for ITU zone first and then CQ which is different from most logging programs.

I agree that accuracy is the job of the submitter.
but:
I HOPE that a process that corrects errors can be a combination of logging and TQSL.
Where detected errors can pop up with a "Zone indicates a possible error, do you wish to correct or continue?" type message.

To paraphrase. "Make it easier, and they will come".

As an aside, last night I was on PSK and a Columbian station asked me for instructions on joining LoTW. Immediately after ending our qso, 4X6UO called me and informed me that he uploads his logs to LoTW once a week.

So LoTW is catching on, I'm old enough to remember people saying "SSB will NEVER be popular!" :-)

As an retired firefighter, I still have my turnout gear and am used to 'flames' so don't bother!.

"The wise person writes bomb-proof code.

1462. 9K2USA

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-07-14 18:08:26 UTC
From: C.M. Christensen
Topic: 1462 Message: 1462

A short time ago I enjoyed seeing the logs from 9K2ZZ appear on LoTW eventhough I previously had all of these contacts with Bob confirmed via W8CNL. However, it was really a suprise today to see my 1991, 15 meter RTTY contact with 9K2USA, on LoTW. I had sent a card direct to 9K2RA, as instructed, but never received a reply. Now if I could only get some sort of confirmation for contacts with 9K2RA and 9K2SD, which have also been hanging since 1991, it would really be a good week.

not sure what you mean.
If he's a stateside ham, and is starting with LoTW.
Then he gets his password that allows him to upload files via a postcard in the US mail.
This takes from 3 to 7 days 'USUALLY' depending on his location and the idiosyncrasies of the postal service.

I hope that helps...if we are talking about the same part of the process.
Check the FAQ's on the lotw site, it explains the process chronologically.

Isn't there something, maybe it's the actual certificate that is sent by
e-mail to the applicant? It's been a long time since I made my application
and my memory of the process is a little fuzzy.

The chronology is what we have been using. It just seems to me that the e-mail response was very quick on the order of a couple of days. My friend has had 4 days pass and was getting worried that something was wrong.

Your right Gerry.

I just got used to getting answers to my questions from Wayne of Dave and didn't think to mention the special help email address.

My wife says I'm loosing my mind so as she has ALWAYS been right,
I'm going to blame it on CRS.

If at first you don't succeed, redefine success.

When should a qso be logged?
I usually hit the 'log it' key when the station comes back to my call.
But I see in a lot of PSK or RTTY programs that people use a 'logging buffer' that says something like:
"qso logged at 12:00z etc. etc."

In most contest of dxing situations this isn't an issue, but for a rag chew, it could go over the LoTW time span criteria and not show up as a qsl.

So what's your opinions?

With the LotW criteria something like +/- 30 minutes, I don't think there is much chance of "missing" a legitimate QSO unless someone's clock is badly off ... or as I found in many of my old cards stations were logging in local time but indicating GMT.

Further, most computer logging programs record both start and end times ... with the start time being the one that LotW will accept.

I must have had a brain fart, for some reason I though 5 minutes was the LoTW span.
Blame it on too many Margaritas.

From the OPDX bulletin......
YV0, AVES ISLAND. The official YV0 DXpedition announcement was finally released this past week by the RCV. The press release states:
"The Radio Club Venezolano (RCV) is celebrating the 70th anniversary and would hereby announce an expedition to Aves Island - one of the top ten most wanted DXCC entities.

Logs will be on ARRL's LOTW (Log of the World) but the expedition will NOT load logs into EQSL but right QSO's on the InBox will be honored.

As far as I know this is the first major DX-pedition to use LoTW.

I hope this will encourage more stations to participate

Jim

Not only that, they're handling the "other" on-line service
correctly ... responding to valid requests but not posting a
"treasure map" for those trolling for busted QSO.

Dennis,

Depends if it's LoTW only or coordinated with a paper submission. I've been told, in either case, it simple drops into the regular DXCC processing queue. I submitted a combined submission early on (LoTW #63) and it was done in a few weeks but I think that was due to the desire to "test" the system.

There is an ARRL WEB survey about log usage. The results are interesting.

Yes, a computer log and I log every contact 28.8 % (248)
Yes, a computer log, but I only log memorable QSOs 4.2 % (36)
Yes, a paper log and I log every contact 38.2 % (329)
Yes, a paper log, but I only log memorable QSOs 12.4 % (107)
No 16.5 % (142)
Total votes: 862

Only 29% of us use computer logging!!!!!

Jim

I keep a full, every qso, log.
That's the way I learned back when you even had to log start/end times of cqing.
And as a low power novice I did a lot of cqing to no responses. hihi
But to each his own....

Any one remember what year they relaxed the logging requirements?
I can barely remember breakfast.

Presuming that survey is a representative sample, it means 67% of us keep a complete log and another almost 17% keep a log of important contacts. That's a much higher rate than I'd have expected.

Considering this is a WEB survery, the numbers are skewed to begin with.
To take the survey you must have a computer and an Internet account.
Most of us do, but it still skews the results. Obviously, those without
a computer don't keep a computerized log and can't answer the survey.

Quite right !!!

However, only 33% of those with computers bother to keep an "Electronic Log"
so I think the final number would be much lower than 33%.

Maybe in the 8% to 10% region for "Electronic Logs" overall.

Mark me down in the "so what and who cares" camp.

Ham radio is about radio, not about how (or even whether) anyone keeps a log.

Back when I was a pup it was the law, so I did it. Became a habit, and I still do it, but doesn't make someone a child of a lesser god if they happen not to keep one, or what media they prefer to use.

Well, EXCUSE us for discussing electronic logging in what seems to be an electronic logging board. I don't think anybody was being condemned for anything Hans. Obviously you must have some intrest in computer logging or you wouldn't be a member of this board. In the past individuals have expressed their dismay about the number of hams involved in LotW, and I think someone was only trying to shed some light on the subject.

1502. Re: [ARRL-LOTW] Interesting

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-01 04:49:27 UTC
From: Jim Brannigan
Topic: 1491 Message: 1502

MessageWhere does the attitude come from Hans????
I was simply stating the results of the ARRL survey. As someone else pointed out it is a skewed survey, so the actual number of hams using computer logging is less than 28%. This is the MAXIMUM number of Hams that are candidates for LoTW.
Your comments add What, to the discussion?????

Well, EXCUSE us for discussing electronic logging in what seems to be an electronic logging board. I don't think anybody was being condemned for anything Hans. Obviously you must have some intrest in computer logging or you wouldn't be a member of this board. In the past individuals have expressed their dismay about the number of hams involved in LotW, and I think someone was only trying to shed some light on the subject.

1503. July incoming

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-01 17:16:41 UTC
From: FireBrick
Topic: 1503 Message: 1503

Pretty good month, 303 LoTW qsls arrived in July.
13K+ overall.
Most were contest qsl's but I did get 1 new band/mode for Challenge.

User not Found. (S)mile, (L)augh, (T)hank God?

Bill H. in Chicagoland

1504. Need help

Date: 2004-08-05 15:04:13 UTC
From: ke7gi
Topic: 1504 Message: 1504

I have a LOTW account set up and working and have DXCC. I have several QSL's that I would like to apply towards a couple of other awards, but don't yet have enough to qualify for the award. (I already purchased 500) I can't figure out how to apply these qsl's without applying for an actual award. Maybe I can't?

Thanks for any help.

73, Dave ke7gi

1508. RE: [ARRL-LOTW] Renewal of certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-06 18:46:54 UTC
From: Patton, David NN1N
Topic: 1505 Message: 1508

Hello Leo

It is not necessary to renew your certificate at this time. Approximately ten days prior to expiration, LoTW will send an email to that alerts you to the renewal and provides a way for you to do that.

It won't hurt to renew as Joe explains. Yes, you will receive a new certificate the same way as the first time.

Have you seen NP2I's "Easternmost End of the United States" card? It's displays one of the nicest
looking "ends" you could imagine, and it deservedly occupies a prominent spot on my wall as well
as... I'm sure... quite a few discriminating shack walls out there.

It wouldn't surprise me if there's a lot of hams out there that "still want the cards". Many hams
(myself included) like to display the cards for a variety of reasons... I like them in my shack to
help visitors (especially the kids) better understand the globe-hopping, culture-spanning aspects of
the hobby. Along with award certificates they make fun wallpaper.

LOTW is great, wave of the future and all that. But I must admit... I do still like the way the
cards from NP2I, TU2JL, and a few similar others... brighten up my shack and get that "certain look"
;-) from my XYL...

It is fine that they still want the cards, nevertheless they ought to also send to LOTW.
It is certainly not in the sprit of Amateur Radio not to do so. I would be more than happy to send them a real card if they ask.
Very fortunately there are only a few operators that have the power to force a real card due to their rarity.

I don't believe that the LoTW was meant to (or ever will) "replace" QSLs but rather alternate method of confirming contacts. Much like the bureau vs. direct for cards.

1517. Re: [ARRL-LOTW] some LoTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-09 17:53:39 UTC
From: Jerry Keller
Topic: 1510 Message: 1517

Gee, Gil...I don't know if there's universal agreement on what is or is not "in the spirit of
amateur radio", but I certainly agree it would be nice if everyone uploaded QSO's to LOTW... as well
as giving the opportunity to get a card too, if I send a card and an SASE or green stamp.

There is, however, a big problem with LOTW: it's still too complicated. I suppose it has to be
"secure" so people won't cheat, but if that makes it so complicated that it's hard to use, many
people just won't use it.

Take me, for example...please :-) I've gotten partway into LOTW, I have my certs (for previous and
current callsigns) but at that point I'm stuck. I've been given directions (many thanks to those who
have tried), I've tried to follow them several times, but I have not yet been able to make it work.

I realize thousands have successfully managed to use LOTW, so obviously "it works". The problem is
not with LOTW, the problem is I have not been able to understand it. So it's not foolproof yet, and
I submit my own experience as evidence. This fool hasn't yet gotten it to work.

How many others are in this boat with me?

Topic: 1510 Message: 1518

Jerry,

I have used the LoTW pretty well from day one including submitting (and receiving credit) LoTW hits for DXCC. Although it's a bit of work to get through it the first time, once you've got there, it works well and is very useful in tracking your current DXCC/Challenge totals.

I can see non English readers having significant difficulty in setting up and using LoTW. Translation to other languages is critical to getting more global participation.

The other thing that we all need to remember is that:

- many hams don't have computers.

- the ones that have don't all use computer logging.

- the ones that do computer logging do not all have access to the internet.

- even if the have a computer and log on it and have internet access, they choose not to use LoTW for a variety of personal reasons. Their prerogative!

To me "the spirit of amateur radio" has little to do with ones personal desire to confirm a contact. I respect the request of the operator of the station I want the card from. If he says "direct only with 2 GSs" and if I want that confirmation, he gets a direct mailing with an SAE and 2 GS.

Subject: Re: [ARRL-LOTW] some LoTW Stats

Gee, Gil...I don't know if there's universal agreement on what is or is not "in the spirit of
amateur radio", but I certainly agree it would be nice if everyone uploaded QSO's to LOTW... as well
as giving the opportunity to get a card too, if I send a card and an SASE or green stamp.

There is, however, a big problem with LOTW: it's still too complicated. I suppose it has to be
"secure" so people won't cheat, but if that makes it so complicated that it's hard to use, many

people just won't use it.

Take me, for example...please :-) I've gotten partway into LOTW, I have my certs (for previous and
current callsigns) but at that point I'm stuck. I've been given directions (many thanks to those who
have tried), I've tried to follow them several times, but I have not yet been able to make it work.

I realize thousands have successfully managed to use LOTW, so obviously "it works". The problem is
not with LOTW, the problem is I have not been able to understand it. So it's not foolproof yet, and
I submit my own experience as evidence. This fool hasn't yet gotten it to work.

How many others are in this boat with me?

1520. Re: [ARRL-LOTW] some LoTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-09 19:59:33 UTC
From: Carl Smidt
Topic: 1510 Message: 1520

Hi All,

If LOTW is really that hard for many to use, that is a real shame.

I found it quite straight forward, after some initial head scratching and some excellent help from the ARRL's LOTW crew, to upload my logs for my different calls.

I am still not sure how to really use it for DXCC credits, etc., but I am working on it.

Fortunately, with the recent new issue of PDA's LOGic 7 logging software, uploads and downloads have become just a simple click away. A complete, no brainer.

I now upload my log almost on a daily basis, wasting no more than a few seconds each time.

Sad to say, my return LOTW QSL record is rather dismal at around 3%, but hopefully that will improve with time.

I would think that LOTW's greatest asset would be nullifying the requirement to send one's precious and irreplaceable QSL cards to the ARRL for contact verification.

If they get lost in the mail how do they get replaced???????

Thousands of dollars down the drain and worse, many would be impossible to replace. I have a large pile, bringing me up to over 326, that I am loath to mail in.

It certainly has little to do with receiving, or not receiving, QSL cards in the mail, that is still the choice of each individual.

I QSL ALL of my contacts, direct or via the bureau, depending on their importance to me.

Perhaps the ARRL should post a simple, and I mean simple, step-by-step procedure for uploading one's log on their web site, listing various examples and scenarios.

If we don't get more participants, and fast, the whole thing will just have been an exercise in futility.

73, Carl VE9OV

Jerry,

I'd certainly suggest you send you problem to lotw-help@... and I'm sure Dave or Wayne will set you straight.

I'd be happy to help as well if I can. I have about 8 certificates for my various calls and prefixes. I assume you followed the process in: https://www.arrl.org/lotw/getstart

who
have tried), I've tried to follow them several times, but I have not yet been able to make it
work.

I realize thousands have successfully managed to use LOTW, so obviously "it works". The problem is
not with LOTW, the problem is I have not been able to understand it. So it's not foolproof yet,
and
I submit my own experience as evidence. This fool hasn't yet gotten it to work.

How many others are in this boat with me?

73, Jerry K3BZ

1523. Re: [ARRL-LOTW] some LoTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-09 22:52:08 UTC
From: K0HB
Topic: 1510 Message: 1523

LoTW to date has over-promised and under-delivered. While a lot of seductive word-pictures have been painted about it's 'potential', in the real world hams seem to be increasingly bored with the modest amount of usefulness we actually get from it.

I don't believe that the LoTW was meant to (or ever will) "replace" QSLs but rather alternate method of confirming contacts. Much like the bureau vs. direct for cards.

It is fine that they still want the cards, nevertheless they ought to also
send to LOTW.
It is certainly not in the sprit of Amateur Radio not to do so. I would be
more than happy to send them a real card if they ask.
Very fortunately there are only a few operators that have the power to force
a real card due to their rarity.

Wait a minute here Bob.
My brain is smaller and emptier than yours!
I'm far dumber than you....and I have my wife to back that up.
And I was able to get all 10 of the combo mine and stations I manage onto LoTW.
So there!

If I can do it (albeit with a bit of help from LoTW desk)
ANYBODY CAN!

1526. Re: [ARRL-LOTW] some LoTW Stats

Heck no, Jerry. Just messin' with you. ;-) I guess I was one of the lucky ones that just didnt run into any obstacles. A lot of the very necessary security in place necessitates a more difficult "user path". Just something we all will have to deal with.

Then again, I only have about 23K qso's loaded, so what do I know? A friend of mine in CADXA has over 250K loaded!

Unfortunately, I have to agree. DX participation is low and in a recent ARRL survey only 25% of US Hams use computer logging.
Perhaps it is an idea who's time has not yet come.....
LoTW to date has over-promised and under-delivered. While a lot of seductive word-pictures have been painted about it's 'potential', in the real world hams seem to be increasingly bored with the modest amount of usefulness we actually get from it.

Yeah, you were just messing with me....I figured that was it :-) But you know, there's a certain
serious aspect to this discussion. It doesn't help me (or anyone else that's having problems) when
we ask for help and those of you who have been successful don't treat it seriously.

I can tell you that on some other occasions (on other ham reflectors) the situation has been
reversed, and I have been one of the guys who knew the answers. What I thought I'd do then was write
a "dick-and-jane", very simple and detailed, step-by-step procedure that clarified the complicated
parts. I tried to anticipate questions, not make any assumptions, clear up what I saw as problems
with the "book" instructions, and not leave any little piece out.

But above all, I tried to put myself in the other guy's shoes and remember how difficult it is to
admit that you "just don't get" something that a whole lot of other people seem to easily
understand, and ask for help. I didn't take offense here, Bob, but I easily could have... and I
mention all this to maybe prevent that from happening in the future, to some other "dumb" ham.

So how about it? Any of you smart guys out there that have this LOTW thing down pat... are you
willing to write up something that will help a guy who's dumber than a submerged rock :-) ??

As I got older I found it interesting and rewarding to "read the instructions" and follow them to the letter..
This works for Radios, cars, drills, coffee makers, electric can openers and kids toys (mine)...
I was having trouble with LoTW, old age kicked in and I read the instructions. DUH, IT worked!!!! They were simpler then the instructions for setting the clock on my VCR 20 years ago....

Jim

So how about it? Any of you smart guys out there that have this LOTW thing down pat... are you
willing to write up something that will help a guy who's dumber than a submerged rock :-) ??

73, de Hans, K0HB

I would bet a similar % would apply to a good number of 'areas' of interest. % that use HTs? % that use repeaters? % that use HF? % that use a mobile? % that build equipment? So that 25% number did not surprise me. What has been a surprise is the lack of participation by DX. Although the so-called "domestic DX" seem to be participating, the lack of promotion around the world can be attributed to a number of reasons. How about...

Language barriers (Everybody else needs to know the English language in addition to understanding the procedural methods of LOTW)

Computer / internet access in distant parts of the world is limited.

No promotion outside QST readership.

The need to integrate other awards into the process renders the LOTW listing of limited value. They still need the card to use the credits elsewhere.

The 'word pictures' Hans is talking about are models of how it could be if LOTW were a full-featured awards application. I haven't heard a recent update on the 'progress' or even whether the ARRL intends to develop LOTW further or not. I also think LOTW could be a major contributor to increased activity on all bands if and when participation increases.

I've got 20K QSOs, about 1/2 of which is DX from 265 countries, and over 10% response, yet I have yet to make DXCC using LOTW. And I cannot even tell if I have a WAS or not. As far as being 'bored?' You bet! My numbers have not moved all summer...

Ford-N0FP

Adding Awards would help, but I still see strange things. In July, we had some spectacular 6M openings. I had a chat with a vacationing WA4/VP9. He liked the openings, but bemoaned the QSL card deluge. I mentioned LoTW, but he said that he liked the post cards. Subsequently I see a QSL on eQSL, but not LoTW.

Go figure...

No promotion outside QST readership.

The need to integrate other awards into the process renders the LOTW listing of limited value. They still need the card to use the credits elsewhere.

Well Jerry,
I looked on the map to see if you were close to me, and
found you are on the other side of the state. If you were
close I would have be more than glad meet with you and
try to help you. I had a start with some 'bumps' in it, but
after some great help from the group and after putting in
all kinds of logs for both stateside and overseas operations
it got pretty easy. If you want to try via e-mail, just shoot
me where you are having the trouble and I'll try to walk you
through it - and if I can't we sure can find someone that
can.
73,
Joe W7LPF [New Florence, PA]

You said it well. We... as QSL "collectors"... must bear the cost of expanding our collections. If
we want it, we pay for it. LOTW isn't free either, but it sure helps lower the cost of DXCC achievement and recognition, so I'd love to participate if I can find the right help.

Jerry,

I have used the LoTW pretty well from day one including submitting (and receiving credit) LoTW hits
for DXCC. Although it's a bit of work to get through it the first time, once you've got there, it
works well and is very useful in tracking your current DXCC/Challenge totals.

I can see non English readers having significant difficulty in setting up and using LoTW. Translation to other languages is critical to getting more global participation.

The other thing that we all need to remember is that:

- many hams don't have computers.

- the ones that have don't all use computer logging.

- the ones that do computer logging do not all have access to the internet.

- even if the have a computer and log on it and have internet access, they choose not to use LoTW
for a variety of personal reasons. Their prerogative!

To me "the spirit of amateur radio" has little to do with ones personal desire to confirm a contact.
I respect the request of the operator of the station I want the card from. If he says "direct only
with 2 GSs" and if I want that confirmation, he gets a direct mailing with an SAE and 2 GS.

Subject: Re: [ARRL-LOTW] some LoTW Stats

Gee, Gil...I don't know if there's universal agreement on what is or is not "in the spirit of
amateur radio", but I certainly agree it would be nice if everyone uploaded QSO's to LOTW... as
well
as giving the opportunity to get a card too, if I send a card and an SASE or green stamp.

There is, however, a big problem with LOTW: it's still too complicated. I suppose it has to be
"secure" so people won't cheat, but if that makes it so complicated that it's hard to use, many
people just won't use it.

Take me, for example...please :-) I've gotten partway into LOTW, I have my certs (for previous and
current callsigns) but at that point I'm stuck. I've been given directions (many thanks to those
who
have tried), I've tried to follow them several times, but I have not yet been able to make it
work.

I realize thousands have successfully managed to use LOTW, so obviously "it works". The problem is
not with LOTW, the problem is I have not been able to understand it. So it's not foolproof yet,
and

I submit my own experience as evidence. This fool hasn't yet gotten it to work.

How many others are in this boat with me?

73, Jerry K3BZ

1535. RE: [ARRL-LOTW] some LoTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-10 02:49:24 UTC
From: rojomn
Topic: 1510 Message: 1535

I fear that there is only one way that LotW will EVER in a lifetime become
useful to the majority, if ARRL REQUIRED that it be used for the awards.
Since that is obviously not possible of fair to many, perhaps some new
highly sort after award that does require LotW would help?

I don't know, it is really a huge disappointment at this point.

Not all of us. In addition to uploading my contest logs, I've gone back
in keyed in all of my paper logs. I'll admit it wasn't only for LOTW -
I used the opportunity move all of my logs to a PostgreSQL database.
But the two made for a nicely complementary project: I used XLog to key
~ in the paper logs (the shack computer runs Linux), generated ADIFs, and
imported them both into LOTW and into the database. Currently, I'm
using tlf for contesting and XLog for day-to-day logging, but I suppose
eventually I'll grow my own interface incorporating the database. I've
been poking at this for while, but it was LOTW that gave me the final
impetus to finally get a move on.

I didn't have that much trouble getting LOTW going, but I've been in the
computer industry for over 25 years, so I don't make for an 'average
amateur' comparision point.

It's going to be interesting to see what happens when WAS is linked in
to LOTW - I wouldn't be surprised to see a hefty number of
multiple-WAS-submissions coming out of LOTW immediately following.

I agree that it seems LoTW could use a 'Publicity Agent'.

I've included the buffer:
"Please join the free ARRL LoTW QSL system"

to my cw & rtty programs.

and...I'm proud to say people have asked me about the program.
so I've now included a buffer that gives the LoTW info URL.

and I'm also proud to say this resulted in two non USA hams
joining the program. (that I know of)

My 'two' aren't many but if all the reflector members who bemoan the slow growth beat my number by one....?????

and with regards to those who have had problems getting their logs up and running, between Dave, Wayne, and this reflector, I KNOW that there are people willing to help.

How can there be self-help "groups"?

Bill H. in Chicagoland

PS: LOL, that tagline was purely random. but amazingly appropriate

Ford,

DX participation could be encouraged if ARRL would work closely with the IARU to promote LoTW. An IARU exec. friend of mine mention that the QSL bureau system supported by IARU is having problems and something like the LoTW could be a logical alternative.

LoTW to date has over-promised and under-delivered. While a lot of seductive word-pictures have been painted about it's 'potential', in the real world hams seem to be increasingly bored with the modest amount of usefulness we actually get from it.

73, de Hans, K0HB

I would bet a similar % would apply to a good number of 'areas' of interest. % that use HTs? % that use repeaters? % that use HF? % that use a mobile? % that build equipment? So that 25% number did not surprise me. What has been a surprise is the lack of participation by DX. Although the so-called "domestic DX" seem to be participating, the lack of promotion around the world can be attributed to a number of reasons. How about...

Language barriers (Everybody else needs to know the English language in addition to understanding the procedural methods of LOTW)

Computer / internet access in distant parts of the world is limited.

No promotion outside QST readership.

The need to integrate other awards into the process renders the LOTW listing of limited value. They still need the card to use the credits elsewhere.

The 'word pictures' Hans is talking about are models of how it could be if LOTW were a full-featured awards application. I haven't heard a recent update on the 'progress' or even whether the ARRL intends to develop LOTW further or not. I also think LOTW could be a major contributor to increased activity on all bands if and when participation increases.

I've got 20K QSOs, about 1/2 of which is DX from 265 countries, and over 10% response, yet I have yet to make DXCC using LOTW. And I cannot even tell if I have a WAS or not. As far as being 'bored?' You bet! My numbers have not moved all summer...

Gil,

Should ARRL follow your advise, it would likely damage DX participation in the DXCC program overall.

ARRL can't mandate that every DXCC participant globally have access to a computer and the internet.

I, for one, will continue to use the LoTW as a supplement to paper cards (which I like to send and receive) that are obtained by many methods (direct, bureaus, QSL services, managers,etc.)

Gerry,

Great idea. The trouble is, somebody has to 'do it.' I get the impression that the ARRL has no budget assigned for promotion, which is largely why it is not being done by staffers today. I also get the impression that there is no mechanism to empower a volunteer to get it done either. It makes me wonder if there couldn't be a method such as a "LOTW Promotion Board" or "Committee" made up of interested and capable volunteers appointed by the ARRL Board. At least then there would be a body of people energized to take advantage of these opportunities. Until this happens, nobody outside the ARRL will feel it to be "their job" to get it done...

Do we really have to wait for ARRL to appoint people? I'm reminded of
the 'Team OS/2' groups that sprung up to push OS/2. They pretty much
got started despite IBM's lousy marketing. If ARRL doesn't have the
budget for LOTW PR, maybe some enthusiasts outside of ARRL should have a
try at forming 'Team LOTW'.

This evening a League employee is running a pile-up from VP5 and "stating QSL via home call"
I asked him about LoTW and he said sure. I then checked my LoTW log and NONE of my many contest QSO's with him have a QSL hit!!!

If League employees aren't buying into LoTW, then why should anyone else?

Gerry,

Great idea. The trouble is, somebody has to 'do it.' I get the impression that the ARRL has no budget assigned for promotion, which is largely why it is not being done by staffers today. I also get the impression that there is no mechanism to empower a volunteer to get it done either. It makes me wonder if there couldn't be a method such as a "LOTW Promotion Board" or "Committee" made up of interested and capable volunteers appointed by the ARRL Board. At least then there would be a body of people energized to take advantage of these opportunities. Until this happens, nobody outside the ARRL will feel it to be "their job" to get it done...

Ford,

DX participation could be encouraged if ARRL would work closely with the IARU to promote LoTW. An IARU exec. friend of mine mention that the QSL bureau system supported by IARU is having problems and something like the LoTW could be a logical alternative.

LoTW to date has over-promised and under-delivered. While a lot of seductive word-pictures have been painted about it's 'potential', in the real world hams seem to be increasingly bored with the modest amount of usefulness we actually get from it.

73, de Hans, K0HB

I would bet a similar % would apply to a good number of 'areas' of interest. % that use HTs? % that use repeaters? % that use HF? % that use a mobile? % that build equipment? So that 25% number did not surprise me. What has been a surprise is the lack of participation by DX. Although the so-called "domestic DX" seem to be participating, the lack of promotion around the world can be attributed to a number of reasons. How about...

Language barriers (Everybody else needs to know the English language in addition to understanding the procedural methods of LOTW)

Computer / internet access in distant parts of the world is limited.

No promotion outside QST readership.

The need to integrate other awards into the process renders the LOTW listing of limited value. They still need the card to use the credits elsewhere.

The 'word pictures' Hans is talking about are models of how it could be if LOTW were a full-featured awards application. I haven't heard a recent update on the 'progress' or even whether the ARRL intends to develop LOTW further or not. I also think LOTW could be a major contributor to increased activity on all bands if and when participation increases.

I've got 20K QSOs, about 1/2 of which is DX from 265 countries, and over 10% response, yet I have yet to make DXCC using LOTW. And I cannot even tell if I have a WAS or not. As far as being 'bored?' You bet! My numbers have not moved all summer...

From: Joe Subich, K4IK
Topic: 1510 Message: 1549

OK, I went back and checked more carefully ...

I have two hits out of 44 QSOs .. two stations out of 18.
In one case the card preceded the LotW confirmation by
more than six months ... in the other I neglected to get
the card. However, there are a lot of "easy" stations
managed by KU9C not confirmed by LotW for which I have
cards (J75KG, J7OJ, 8P2K, 8P6SH, CO8DM, V26DX, VP6/K7BV).

Given electronic logs, I do not understand why QSL managers
are not uploading as soon as they receive the periodic
updates from their stations. That the big QSL managers do
not seem to put logs from 100% of their stations on LotW
is certainly another reason for the low rate of adoption.

> still come in on paper?

I don't know ...

However, in my relatively small sample, the two LotW confirms
are the more rare of the group (YA and 4W). Those cards that
I have are from contest type operations that I know were done
on computer.

As far as green stamps ... with stateside managers I always
use SASE only. In some cases will "double up" and send two
or three cards/stations in one mailing. When I choose to make
a contribution, it is done separately ... never as part of the
QSL process. I strongly object the "sawbuck for a QSL" game.

Perhaps DXAC and Awards Committee should state that any station,
operation or manager using computer based logging and fails to
upload logs to LotW is not conducting themselves in an exemplary
manner (Rule 12). After all, one need not have internet access
to participate in LotW ... it is even possible to receive a
certificate, sign files, and submit log data all by mailing
computer media (floppy, CD, etc.).

73,

... Joe, K4IK

Maybe the first thing is you have to sign up for LoTW. I checked a few of the KU9C managed stations and find hits for BS7H, BQ9P, E44DX, 4W/W3UR, 4W/N5KO,4W/K7BV AND 4W/N6FF. I am sure there are more but appears that Steve is participating in LoTW.

Interesting ... since */K7BV is via KU9C ... any you're correct,
I don't have a single LotW hit for him either (or any of KU9C's
many stations AFAIK).

My E44DX is via OH2BN and those QSOs are not on LotW - even though
I have cards. Again, I have LotW confirms for only two of 18 KU9C
stations worked so it seems as if the participation is far from
universal.

Yes, but...

BQ9P stuff was 2001. He hasn't loaded the 2003 stuff. Would seem like he could save himself a lot of work by doing so but then again it might slow the donations to a trickle - not that there are likely any more coming in at this late date.

Actually that is pretty funny. According to the online BQ9P log, I had 7 Q's with them. For some reason, I've only sent 5 of them to LOTW. And none of them are confirmed.

Guess it is time to send the paper card and figure out what happened. All of my logging is electronic and the computer is synchronized to network time standards so this should be an interesting one to figure out!

I don't think it's the manager's call to load to LoTW, it's his client that would decide, if and when to load and likely have to acquire (or at least approve) the Certificate.

1563. [ARRL-LOTW] LoTW & Old Geezers (Was:Interesting)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-12 01:25:27 UTC
From: R Johnson
Topic: 1491 Message: 1563

Hi Hans:
Just found you reply after vacation. !!!

Gee, I don't know what I said or did to "Over Torque your Head Bolt" ???

First:
I was a "Young Pup" just like YOU !!! A LOT of us WERE !!!
As you said "When first I got my license" we had to keep "Paper Logs" of EVERYTHING we did (except passing gas)!!! Lots of CQ ---- No Response, entries in my old logs books !!! Lots of entries for all the nets I used to check into !!! Lots of old ARRL "Log Books" stacked up in the bookcase. Then we got computers and WE still kept logging ALL QSO's !!!

Then when you wanted to move up, you had go to the FCC office in the old "Customs House" in Boston, MA for your exam and let the FCC people watch you SWEAT bullets (and pass a lot of gas from both ends) !!!

Next:
The subject this "thread" was about the ARRL poll on who kept logs and how.

Since this list is about LoTW, Electronic logging, and therefor requires the use of computers to accomplish this feat; I felt my comments were in order.

The final results of the ARRL poll, with 2,789 respondents were:
32.7% kept an "Electronic Log" (call it 33%)
50.3% kept a "Paper Log"
17.0% kept "No Log"

So the bottom line of the poll was ONLY 1/3 of the Hams responding kept a log that could be immediately (more or less) utilized to LoTW !!!

Trying to put these numbers into prospective, I'm going to assume that 99% of the respondents were ARRL Members. How many of U.S. Hams respond to "Electronic Polls" from the Lithuanian, German, East Timor or New Zealand equivalent of the ARRL ???

If I look at the ARRL Membership we have, according to Ward Silver, N0AX and Tom Frenaye, K1KI, the ARRL has a membership of about 165K out of the 700K U.S. licensed Hams. This results in about a 22.8% League membership !!! Reducing this number by the ARRL "Guesstimate" that this number is reduced by about 2% to 5% for SK's. So I'm going to make an ASSUMPTION that if only 20% of the US Hams are ARRL members. This number is further reduced by the number of INACTIVE U.S. Hams (Working to many jobs, RFI, Zoning, etc) and will not be renewing their Ham License, so this final number will be less than 20% !!!

If we assume that the number 700K U.S. hams is correct AND assuming that ALL of the 7,680 LoTW users are U.S. Hams, that means that we have about a 1.097%

utilization factor for LoTW !!! Rounded off is 1.1% using LoTW !!!!

These numbers (1.1% of the U.S. Ham population) sure don't don't recommend usage of LoTW to the general Ham population "World Wide" !!!

What do we need to do to increase the utilization numbers for LoTW ???

I think you need to look at the motivation behind being a QSL manager. Why do they do it? Lots of reasons. Not all of them altruistic. And for all we know, they are using paper logs!

Some of these guys collect stamps. Not the green stamps, postage stamps. I seriously doubt any of them do it for the green stamps. Others get paid to do it, but even then I'll bet they actually do it for reasons other than $$$.

Lemmeessee... They must ponder "QSLing the old fashioned way and I have fun...use LOTW, eQSL, etc. and my 'worth' to society as a QSL manager is gone. What should I do? Hmmmm... Punch in all these QSOs and rid the world of the need for my job, or do nothing? I guess I'll do nothing!"

I would bet that KU9C is not boycotting LOTW. He's busy! Imputing ulterior motives, sinister and otherwise, is just not fair! If you guys really care, why doesn't somebody just ask him? Then ask all the QSL managers. This seems all too simple to me...

1567. Re: [ARRL-LOTW] some LoTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-12 02:25:18 UTC
From: Jerry Keller
Topic: 1510 Message: 1567

I do as you do, SASE....but I have heard of green stamps being sent along with SASE to Stateside
mgrs, to help defray expenses. I've been under the impression it's pretty common, but it seems like
something that would be very hard to check. If it's a significant practice, it might help explain
the reluctance of mgrs to use LoTW.

I'd be very surprised it green stamps were not a significant influence on a lot of the
DX...especially in some of the poorer economies, some of those guys may really depend on the income,
to get better gear, maybe even help to better feed their families and improve their lifestyle... I
sure don't begrudge them my buck, I'm happy to be of help if they need it. But I can't see a lot of
those guys embracing LoTW, even if they have a computer and internet access, can you?

It does seem as though the ARRL, and those of us with any influence or a forum to speak from, could
make a better case to DXpeditions, contesters, and Stateside QSL managers about uploading their logs
to LoTW. All the DXpeditions need ARRL recognition for DXCC... there might be some gentle leverage
there. It shouldn't be hard to convert Cabrillo format to something that LoTW would accept, so
copies of contest logs could be uploaded to LoTW after the contest managers are through with them...
the intent to do so could be announced in the contest rules.

Someone up in the ARRL needs to be making this kind of push... and perhaps they are, for all I know,
unless there's some good reasons why these ideas won't work. Most of the ARRL guys and gals are
pretty aggressive on behalf of the membership and HR in general, I think. Maybe some of them read
this reflector and are getting an earful.

Topic: 1510 Message: 1568

> And for all we know, they are using paper logs!

Of the managers I listed, only one returned a hand written
card. All the rest were computer generated labels.

> Imputing ulterior motives, sinister and otherwise, is just
> not fair! If you guys really care, why doesn't somebody just
> ask him? Then ask all the QSL managers. This seems all too
> simple to me...

Nobody (at least not me) is imputing ulterior motives. I'm
simply saying that LotW would probably get a higher profile,
more quickly, if the well known QSL managers would upload
100% of the logs for the stations they manage as soon as they
receive them.

Putting the logs on LotW would also reduce the load and cost
for the QSL manager. I know bureau cards are a loser for
every manger (and some will not even accept bureau cards
for that reason). Even if a manager receives 100% SASE or
SAE & IRC, he's still likely to be out of pocket anywhere
from $0.03 to $0.07 per card for printing, labels and other
consumables.

Well I know from personally talking to one of the QSL managers that it is unbelievable the shape some of the logs they get are in. But that is also their big time ham radio hobby, thank God as I sure wouldn't want to do it and it does cost them bucks.

I have been Pilot several times for DXpeditions and that takes a lot of time but really doesn't cost me anything but time and I really enjoyed it. I also know that is some cases the DX station doesn't even provide them money for cards so they do hope for some green stamps.

Again ham radio is a hobby and that is the part that they enjoy doing. A couple green stamps won't hurt the majority of us and we might think of that when we send them a card and look forward to the return card.

I've been doing a fair amount of surfing to the post office
web site for as many countries as I can find and looking up
the cost of a 20 gm letter to the US in local currency. I
have been using the interbank conversion rate to convert that
back to US Dollars ... by the time a foreign station pays a
premium (ranging from 10% to 50% depending on the bank,
currency exchange or post office), pays anywhere from $0.03
to $0.10 per card for printing, etc. there isn't a whole lot
left from a GS (or two in some cases).

LotW already accepts signed Cabrillo files. The problem is
that LotW will not accept unsigned files from the contest
managers. Now ... if the contest sponsors started requiring
signed logs that would be another thing.

> Someone up in the ARRL needs to be making this kind of
> push... and perhaps they are, for all I know, unless there's
> some good reasons why these ideas won't work.

Several people have been advocating for staff to "evangelize"
on behalf of LotW ... both domestically and globally. There
have also been calls to make the system easier to access for
non-US station. Nobody has seen any evidence of movement on
wither front yet.

> Most of the ARRL guys and gals are pretty aggressive on
> behalf of the membership and HR in general, I think.

True ... but they can only do as much as the management
will allow them to do. Frankly, I do not see any evidence
the top brass at ARRL is committed to LotW ... promotion
efforts have been essentially invisible, award integration
has lagged, usability is an issue for many foreign stations,
and the fees for award credits vs. DXCC fees represents a
disincentive for using LotW.

73,

... Joe, K4IK

> ask him? Then ask all the QSL managers. This seems all too
> simple to me...

Seems pretty simple to me too. If the concerned expressed above for "imputing ulterior motives"
refers to my comment about green stamps having an influence on whether or not a station joins LoTW,
I'd like to clarify.

I have no problem with anyone accepting green stamps, and I don't think wanting or accepting
donations to defray expenses is an "ulterior motive" at all. In my view, we, the QSL "collectors",
the DXers, have a positive responsibility to help pay the expenses of adding to our "collections".
If we find someone is not playing the game properly, we shouldn't support their play, that's all.
Simple.

QSLing costs money. If we want the cards, or the DXCC credits, we should be willing to pay reasonable costs. A buck or two is pretty reasonable. What is unreasonable is for us to expect a DX
station that receives support for an expensive hobby via green stamps to give that up in favor of
LoTW. Some will, if they can afford to. And some won't. It's not an "ulterior motive", it's just
what's available, what's possible, or what's needed. If the green stamps received by some of our
less well off brother hams overseas end up helping him have a better station and also help him and
his family live a better life, I say that's just fine... and I'm glad to help in that way.

Just my two cents... 73, Jerry K3BZ

Hello K4IK,

Wednesday, August 11, 2004 Joe Subich, K4IK wrote to ARRL-LOTW@yahoogroups.com:

JSK> Again, I have LotW confirms for only two of 18 KU9C stations
JSK> worked so it seems as if the participation is far from universal.

Obviously all of KU9C managed stations logs, uploaded to the LoTW,
were uploaded by the operators themselves, not the manager.

> W3HNK: 1 QSO out of 39
> W3HC: 0 for 8
> AC7DX: 0 for 9
> WA3HUP: 0 for 16

Another obvious thing is that "big" managers usually do not greet the
LoTW idea itself.

1576. Questions for the LotW staff

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-20 01:00:54 UTC
From: Dave Bernstein
Topic: 1576 Message: 1576

When LotW was first released, I successfully uploaded all of my FJ/AA6YQ QSOs to LotW; many are now confirmed. When I display the DXCC Award Application -- Part 1, several of these confirmed QSOs are missing an X in the Challenge column; such QSOs are also missing either an X in a mode column, or an X in a band column. In each case, double-clicking on the hyperlinked callsign shows that the QSO possesses a valid band and a valid mode. What causes the missing Xs, and how do I correct the situation?

In what order are the entries on the DXCC Award Application -- Part 1 table sorted? It looks like the primary sort key is the Entity name, ascending, but after that its not obvious. I'd like my logging software to generate an LotW submission report in the same sort order that LotW presents its application so that its easy for users to check the right boxes.

If the ability to upload a list of LotW-confirmed QSOs for DXCC credit is imminent, you can disregard the sort order question.

73,

Dave, AA6YQ

1582. Excel Spreadsheet to Create ADIF Log Files

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-08-31 14:49:13 UTC
From: Clark L. Stewart
Topic: 1088 Message: 1582

I have mentioned this spreadsheet on the reflector before but for
those who may be new to the LoTW reflector, I'll post this again.

==========

I have recently completed an Excel spreadsheet to quickly convert
paper logs into ADIF format for easy uploading to LoTW or for importing
into regular logging programs. There are similar programs around but my
focus was to make this as fast as possible.

After the first QSO is entered, the spreadsheet will automatically
enter the same Date, Band and Mode for the next QSO so you don't have to
type that for each QSO. It will auto-complete the Time field so you can
just type a "1" and it will log the time as "0001".

Since only the Band is important for LoTW, you need only type in the
whole number of the frequency (e.g. "28" instead of "28.562"). And, you
can just type in a "c" or "s" for CW or SSB or a "1" or "3" for A1a or A3a
Modes. Or, you can type in any Mode that is accepted by LoTW.

Using this program I can enter paper logs six to eight times faster
than by using a regular logging program. Especially when you make several
contacts on the same Date, Band and Mode the entries go very fast.

Once you have entered the data, (maximum of 100 QSO's per run) the
program will create an ADIF file that you can immediately upload to LoTW or
import into a logging program. Or, you can combine it with other ADIF files
in a word processor and upload the combined file all at once.

I have posted a description of this program on my web site along with
a ZIP file containing the spreadsheet program and a Microsoft Word document
with the full instructions. Basic instructions are in the spreadsheet as well.

Here is the link:

<http://www.w8tn.com/software.htm>

This spreadsheet was created with Microsoft Excel 97 so you will need
a version of Excel that is no older than that. Also, you will need a
program that can read .DOC files from Microsoft Word to read the full
instructions.

If you find this program useful I would appreciate hearing about
it. Otherwise, there is no charge, it is Freeware.

CUL, 73, Clark, W8TN

1583. LoTW Stats for this year

Yahoo group: ARRL-LOTW (2003 — 2007)

Hi all,

Got my 'renewal' notification today and decided to make sure I
didn't goof, so I renewed certs for HB and CT ops - no problem.
Will do the DU ops and regular call later on this week. I have to
find the time so I can put in logs from 62-64 [KG6] ops that are
ALAS in logbooks by hand!! But after receiving a QSL from OH2FS
for a 1962 QSO while I was operating up in WA state as K7LRO,
I figured someone may still need that Guam QSL. I know a lot
have got the DU2 on - and that is sort of an oldie [78-81].
Finding more and more hits from overseas which is great - now
if I could only find either a hamfest or a authorized Card checker
that isn't on the other side of the state from me, I could get
a couple of hundred more cards done that counts [and that I
don't want to send via mail if at all possible].
Have a great day - we have been getting the rain from Francis
since early last nite. Stay dry.
73,
Joe W7LPF

That only shows 2004
The RTTY group got into LoTW in a big way, A couple of us were beta testers.
I also think that because so many digital types are using computers to create the signals, they probably already had online logging so it was just a hop and skip to upload the logs.

I got another needed band mode the other day.
Got LX on 40 meter rtty qsl via LoTW.
It was an open band/mode slot and I had two LX stations in the qsl to print and send list.
So...that one saved me approx. $1.60 in postage alone.

Since the start, I've gotten 37 LoTW qsls that I'd never been able to get confirmations for those band/modes.
So I've been happy.
Seeing a LOT more DX stations now as the word gets around.

I have a 'pse join the free ARRL LoTW qsl system' message in both my cw and digital buffers.
I include the URL.

To make it clear ... full RDX support requires two fields:
"RU_Oblast" and "RU_District" (or equivalent). Oblast is
analogous to state or province and District is analogous to
county/judicial district/parish ... LotW does not currently
appear to support Russian districts.

For backward support, it would be nice if LotW (and eQSL) would
support Obalsts is all of the former USSR. I think most of the
independent ex-USSR still use Obalsts (or the equivalent) and
there may be some individuals who are trying to backfill the old
awards.

Joe,

Glad to hear you expanded the question of field extensions to
accomodate other awards, different than ARRL program.

I see the problem imprtant, since the more info included,
will automatically increase the interest for more people
to join LoTW. However, how far to go?

One idea is to go through IARU member societies and ask them
what info to include for socities' sponsored awards. Make it time
limited, and accepted field extensions implement as
'Release 1.0'.

Should there be more such requests after the dead line, than
address the problem in the next release. After all LoTW will not
stay in the ongoing developemnt state forever, but rather in well
defined 'Generally Available' releases.

73 Nenad VE3EXY

P.S. I hope you received 'old style' QSLs for my QSL clients
you asked for?

Just renewed my certificate.
I received it back as an e-mail attachment with instructions to install it.
While trying how to get the attachment into my LoTW file it somehow
got installed and replaced the old certificate.
How did that happen?
Does the certificate software go out and search for the new certificate or what?
Just wondering.

Bill,

I followed the instructions and it signed the new certificates and deleted the old so my guess is that it deletes the old certificates.

I don't think this represents a problem -- it's not a new certificate, just
a renewal of the old one, so why leave the old one in TQSL?

From: Buck
Topic: 1591 Message: 1595

I have had three callsigns and one used twice.

KA4DPS was used for years as a novice and then General Class operator. Then when I received my Advanced license, I was issued N4PGW. I changed it to NA4FM, but after getting my extra, I chose to go back to N4PGW. I have some log information from all licenses and several QTHs.

What is the proper way for me to handle this so that all the information is properly disbursed between callsigns and locations?

Interesting situation.
I think you should contact Dave Patton at LoTW central.

But...just for grins to see if I understand the system correctly.
You should first apply for a certificate for your present callsign.
As you operated for instance.
Jan 1 to Dec 31 1999
and then got the callsign back and resumed operating under that call from
Jan 1, 2002 till present.

I 'THINK' you should enter the first qso date and leave the end blank.
As if you operated the whole time.

You then use that to also apply for a certificate for your Novice call with it's start/end dates.

and also apply for a certificate for NA4FM with it's start and end date.

Each callsign needs it's own certificate with it's own start and end date, with the obvious exception of a callsign that's presently in use.

It's the call that was used, given up, and then reacquired that has me curious.
I'm not sure you can apply for two certificates, one for each time frame.

I'm sure someone will correct this if I'm wrong, fortunately my wife isn't on LoTW reflector or she would already have. :-)))

1597. RE: [ARRL-LOTW] Getting a proper certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-09-10 19:50:30 UTC
From: Patton, David NN1N
Topic: 1591 Message: 1597

Hi Buck

I see you have a certificate for NA4FM. Because you have no QSOs in the system yet, I would ask us to cancel your NA4FM cert and then apply for a new certificate for N4PGW.

Make the date range for PGW cover the whole time from when you first had the call and leave the end date blank. No one received that call while you didn't have it, so there is no harm done. Then, when you have the PGW cert, just make additional requests for the other calls making sure to sign the request with your NA4FM certificate.

I think Bill has it right.

Technically you would be able to get two certificates for N4PGW--one for each date range, but there have been some bugs associated with that if both certificates reside on the same machine. But, you don't need to worry about it, just start over with PGW.

From: Ford Peterson
Topic: 1599 Message: 1599

I was just looking at the ARRL website and checking out the 9/12 Hiram Percy Maxim / 135 article. Wouldn't it be great to see the members and non-members of ARRL flock to LOTW because they can participate, upload their logs to LOTW and get the qualifying certificate?

Yours truly will likely be doing the 160M Contest write-up again this year. I've got a query into Dan Henderson to see if it will be possible to offer a "WAS on a Single Weekend on a Single Band" award using LOTW. Wayne Mills has been out of the office so not much in the way of progress. I would really like to see this type of interaction with hams and LOTW. My guess is that if implemented, over time, the ham population would embrace LOTW as a source of real enjoyment.

From: FireBrick
Topic: 1602 Message: 1602

I've been trying to get a qsl for 20 meter SSB 9V1 for decades.
You would think that one would be easy.

Worked 9V1GO on Sept 4, and mailed a SAE$ qsl request to his manager OK1DOT the same day.

Today I received:
9V1GO via LoTW for that elusive 20 meter SSB qso.

Thank you Bob. That was a hard confirmation to get.
I'll put the card into the file box when it arrives, but crossing out the open band/mode slot was nice.

That's an even 40 qsls confirmed via LoTW that I'd spent a lot of money trying to confirm with no results.

Answers: $1, Short: $5, Correct: $25, dumb looks are still free.

From: FireBrick
Topic: 1603 Message: 1603

Just thought you may want to know that GoList Subscribers have two new features available.
Both are downloaded files.
The first is a listing of 'known' DXpeditions that ARE acceptable for DXCC submission.
(I hate submitting a card and having it bounce for non submission of documentation)

The other is a listing of DX or Dxpeditions that have uploaded logs to LoTW.
If you don't need the card and only need the credit, joining LoTW is cost effective.
(remember, there is no way for you to troll LoTW)

GoList is updating this info regularly.

I'd love to go out with you, but the last time I went out, I never came back.

Topic: 1604 Message: 1604

Seems like the Greek stations upload their entire log to LoTW once a week.
As I've received the same qsl's a number of times.

I'm glad they are taking part, and the repeat qsls are NOT a problem but I'm curious as to how that effects the qsl count for my callsign?

I'm pretty sure that when I check the "Your Account" listing for an upload, it has the message listing if any were duplicates.

Are duplicates ignored in the "You have 13,711 QSL records" line in the heading of the LoTW page????

F> As I've received the same qsl's a number of times.

Not only Greeks do that, many others do that pretty often as well.

F> Are duplicates ignored in the "You have 13,711 QSL records" line in the heading of the
F> LoTW page????

Yes. Just note same QSLs do not increase number of QSLs received.

No, it's working for me.
You mean your trying to get to the LoTW web site where you can check which qsl's you have received?
If you have signed on and have a password, it should be working....

I found my problem with ARRL LoTW
It was something to do with my IE Security settings.
Now I can get to the LoTW page.
Thanks for the replys back to my problem.

Thanks

Hi Tony.

The errorlog you appended is from your ME machine, and shows no errors.

Please check the "Log Debugging Info" box on one of your XP machines, repeat the attempt to sync with LotW, and then send the generated errorlog.txt file to aa6yq@... . Lets take the debugging process off this reflector; if we discover a defect in DXKeeper's LotW synchronization or anything specific to LotW, we can report it here when we're done.

For those interested, the instances of DXKeeper on Tony's XP machines were configured for manual operator downloading -- a capability provided for situations where the logging PC has no internet connection. When automatic downloading was selected, automatic LotW synchronization functioned correctly.

I've said that I created 'Join LoTW etc. buffers for rtty and cw'.

I just got some qsl's in the mail. included was one of those little sheets of paper. Join ..... DX assoc.

Why not include one of these with our qsl requests inviting the people to take part in LoTW.

Might not help you get the LoTW credit, but maybe the next band/mode you work him on you won't have to spend the money.

Maybe the ARRL can have some of these little slips printed up for us to include with our sase's.

There is no security on this earth; there is only opportunity. --Douglas MacArthur

Suggestion.

Go to your adif files and/or log to see if you have logged a
contact wrong ie a day(s) ahead of the date that you submitted
the adif file to Lotw.

The qso date of that particular qso is before or after the date range for that callsign.
The certificate is for a specific date range and this qso is non conforming.

Use Notepad to check the file....Ctr G and enter the line number.
I bet you will see something wrong with the date format.

Good Question But i have another I wonder if they will be a
downloadable adif file with your dxcc info.. I have 45 yrs of qso info on
my dxcc and would like to put it all into a logging program WITHOUT having
to enter it a qso at a time hi hi..

Anthony
I'm a bit confused.
If you have your log in .adi format.
You can use the LoTW software to upload it.

LoTW software can presently accept/convert/upload two types of files. Cabrillo and .ADIF.

Good luck...

Oh and Anthony
Remember, each callsign you have must be it's own log with it's own certificate
indicating the first/last qso dates
But...
All are uploaded using the certificate of your main callsign.

No, Tony is talking about DOWNLOADING DXCC credits FROM the LoTW.
That's what I badly miss too. Otherwise you have to mark in your log
manually (or just put them in) what contacts/bands/modes were credited
by DXCC, if your log allows you that.

Guess i should have been a little more clear after reading my email i can understand why it was weird hi hi..\
I have all my qso's from 1990 on LOTW . but have had dxcc since 1978 when they only had phone ,cw or mixed. they did not keep band qso's till about 1992. I just sent in 300 qsl's that go back to 1962 last month. and the band qso's are now on LOTW . When i connected my dxcc record to LOTW it put an x in my dxcc matrix . but what i would like to do is be able to download all the dxcc records from my old account and what are now on LOTW in a adif file so that i could load them on a logging program. . without having to enter all the paper qsl's when i get them back.
hope this is a little clearer.

Ok, thanks Art, I misunderstood.

I can download/import the lotwimport.adi file and update a qso in that file as now confirmed.
But it still takes me to manually mark that qso/qsl as the one used for DXCC credit.

the lotwimport.adi is of little use in this regard because just because you received a qsl, does not necessarily mean the qsl is acceptable for DXCC credit.

I received a recent dxpeditions LoTW qsl's before the notice that the operation was accepted.
A trivial matter.

I use a log program called ACLog 2.6 put out by Scott
(N3FJP) It has an LOTW upload and download function
that automaticly marks your log as sent or received.
He just added color coding to the log lines that show
a seperate color for sent/received and sent and
received.

You can download a free trial at N3FJP.com.

Yes I understand now.
I'm sort of in the same boat...I have many going back to mid 60's that have been credited.
But the DXCC sheet you get back after a submission doesn't show what band whatever.

It will be a MONSTROUS task for me to resubmit these so they are credited by band/mode etc.
But as they are BEFORE the award start dates, and I'm not sure it will matter that much, I've been reluctant to start that task.

Dxkeeper has a feature that will download LOTW credits that you have
entered into its logging program. and update the load . but you have to
have the qso entered before hand.

Thanks Randy, free logger 32 can do the same. But it's not what I meant. I need a function to download from the LoTW the contacts which gave me DXCC credits, that's what we are talking about. Then I need a logging program feature allowing me import these contacts (if these contacts are not in the log yet) or mark these contacts on the log as credited for DXCC (if they are in the log already). Thus you will have a whole picture of what you have and what you might need.

I talked to Wayne Miller today at the ARRL and he
provided me with the following.

The LOTW is not completely bug free yet and they still
have to have the programmer fix some things. He did
not mention what.

Two things are holding this up:
1. Time as the programmer is not LOTW specific
2. Manpower
He went on to say that he hopes that WAS will be the
next feature they add.

To date his latest tally shows:
1. 51,000,000 QSO's up loaded
2. 1,900,000 matches
3. Two (2) QSO's=1 match

These are rounded off figures.

yes it took me two weeks after i downloaded the matrix from lotw to go thru
all my qsl's and put them in band then mode and all the mulit mode or
bands at the end. i checked all the boxes as to cw rtty sat phone and then
sent them in cost $170 bucks as i had $95.00 worth of band contacts. so
now my old 1974 phone cert will have a few others to set with it. found i
had 99 on cw then found another 100+ qsl's that i had boxed up this week
hi.. had 20 some cw qso's so after the first of the year ill send them in
that will give me
dxcc on phone cw rtty 40,20,15 meters. need 35 more to finish up 80 and
10 mts.. got 8 of them this week on lotw when i checked for new qsl's
uploaded by dx. be nice when iota cq and vucc and a few others join up. i
have noticed that more dx stations are starting to upload their logs..

Bill,

Talk about being senile.

It was supposed to be Wayne Mills.

Do you have a lower response from CW or Phone
contacts?

I seem to have more trouble getting matches from CW.

Absolutely....but think about it.
First off, a MAJOR proportion of my LoTW qsl's are for RTTY/PSK contact.
But this is reasonable as these operators are most likely using computers to generate the RTTY/PSK.
Consequently they are most likely to also computer log.

My SSB and CW are about even.

As CW is still the mode of choice for low power and remote locations that may not have reliable electrical much less internet, than it's reasonable to suspect that they may have a lower response.

And if you wish to get into a Presidential style debate of who's more senile....
I claim seniority. :-)))

And I have my wife to back me up!

At present, LotW does not provide a means of downloading DXCC credits. As soon as such a mechanism is provided, DXKeeper -- the logging component of DXLab -- will support it. I'm sure many other logging applications will do the same.

DXKeeper does have the ability to automatically compute a minimal "submission" -- the smallest set of QSL cards and LotW confirmations for which DXCC desk verification is needed. When you receive notification that your submission has been accepted, all QSOs in the submission can be promoted from "confirmed" to "verified" with a single mouse click. This eliminates the manual processing at the conclusion of the DXCC submission process, but is of no help to ops like Tony who are trying to download DXCC credits for QSOs they did not upload to LotW. That problem will only be solved when verified DXCC QSLs can be downloaded in the same way that confirmed DXCC QSLs can be downloaded today.

On August 5, I applied to have 6 LotW-confirmed QSLs credited to my DXCC account; they have not been accepted due to an acknowledged defect in LotW. I have been told that I'll know the defect has been repaired when my credits have been granted; as of 90 seconds ago, they remain pending.

We hope so, Dave. I see the only problem with downloading DXCC credits
- records made from paper cards do not contain "time" value.

Dave,

I submitted 86 QSL via LoTW, on Sept. 22, and I am still waiting for them to be accepted.
I wonder how long it takes for this process. I would think that it being done by computers, it would not take very long, but maybe I am wrong.I am about to contact LoTW to see if there is a problem on my part.

Vince, K6BIR

Vince:
I usually get a confirming e-mail from the computer within 30 seconds to a
couple of minutes. I believe something is definitely wrong.

1647. Sort Broken?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-10-11 13:43:12 UTC
From: wringmaster2002
Topic: 1647 Message: 1647

Hello All;

I'm new to the group. Love LotW. Very cool idea that, I hope, catches on a bit more than it has. (My current confirmed rate is only 6.32%)

Here's my question:

The last couple of days when I check my QSLs, the list comes back in random order, even thought it says it is sorted by confirmation date. This makes it kind of hard to find the new confirmation. Anybody else have this problem or am I doing something stupid again?

TIA and 73 de

It is working fine here Eric. It sorts the QSO's by QSO date and the Confirmations by QSL date just like always. If you click on Details of the confirmations you see the QSL date that is was sorted on.

..... forgot to mention that you can change how you sort the QSO's and QSL's. I am sure you know this but just in case -- go to the lower part of the screen once you call up the "Your QSOS" screen and you can choose how you want to sort them. Perhaps you checked something different in this box.

Sometimes when I bring up the "last QSLs" they are not always in the order that they were. Any brand new QSL's will usually be at the top of the list but the next most recent might be slightly out of order. It seems like I saw a prior post, maybe on this list, that explained that this was possible but I can't remember why. Maybe if someone resubmits the same QSO it bumps the prior match. Don't know but I have seen it happen.

1651. just curious

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-10-15 14:41:52 UTC
From: FireBrick
Topic: 1651 Message: 1651

THIS IS NOT A COMPLAINT, just a question.

I submitted a hardcard and linked LoTW DXCC submission.
I paid via Visa, and the charge on my account indicates the date was Oct. 10.
(in the past with hard card submissions a Visa charge date coincided with the submission completion date)

The LoTW Awards module indicates that the LoTW part of the submission are now included in my Challenge listings.

But the Application status screen still shows it as not 'FINISHED' and '# QSL'S ACCEPTED' still shows ZERO for that submission.

There was some discussion about the data not being upgraded automatically.
Is this the anomaly that they were talking about?

I'm not worried about the submission as I do see that the 4 LoTW qsl's are now included in my total.
I'm just curious as to the time lag.
I don't quite understand the mechanics of the process although I'm aware that LoTW and DXCC are not totally integrated as yet.

as always....Please and thank you

Using LoTW to look at all my credits, it mirrors the written report you receive with a submission return.
A lot a my credits are for BEFORE they recorded what band the qso was on.
Most (mainly now Deleted) countries just show an X in the Mixed category.

Would it be of any benefit other than just to fill the open boxes in the report, to send these in for data entry.

This would also apply to some countries that are NOT deleted but I worked them before the CW award was started or before the DXCC desk saved that info.

Just a anal data junky and those empty boxes annoy me when I have the info to fill them in with.

Please and thank you.

Bill,
In order to "fill in all the boxes", you have to re-submit all those cards and pay the attending fees.

Jim

I did say 'to send these in for data entry'.
I knew I'd have to resubmit, I forgot to mention that I was aware I'd have to pay for resubmission.

I did a combo LoTW and Hardcard submission at the end of August.
I received the submission back today with my totals sheet etc.
The Visa charge for the submission was posted a few weeks back.

but the LoTW part of the combo still doesn't show "finished"

I have accumulated a quite a number of LoTW qsl's since then and would like to submit those as I bought a bunch of Credits when the Awards function went online.

So my question is....what is the time lag between that combo LoTW submission until it's marked as Finished so I can make another submission?

Daddy, why doesn't this magnet pick up this floppy disk?

Where either of these a 'Combination' submission, and how recently where they?
I'm not concerned about the time, just curious.
My first LoTW submission was NOT in conjunction with a Hardcard submission.
It didn't take long either but that was back when LoTW submissions first came online.

Hi. I'm new to LOTW but have many of my logs uploaded
and everything seems to work.

Is there a way to export the confirmed Q's into some
sort of database form, or even a printout, so I can
log these Q's as confirmed in my logging program
(DXBase)? I want to see all details per confirmed QSO
in a file I can download or something designed to be
printed out. Right now, the only way I can see that
this can be done is to do a query for all QSO's and
print it off the screen as I go to each page. I must
be missing something.

If you are using DXBase2005, you can directly import the LoTWimport.adi from LOTW and it will update your qsl stats etc.
Use the NonDXBase Import utility from the DXBAse Group and select LOTWIMPORT as the type of file importing.

As always, make a safety copy of your log prior to any data import.

I do it almost once a day, if I can do it.....ANYBODY CAN.

From: Art RX9TX
Topic: 1662 Message: 1662

Hello ARRL-LOTW,

I ahve recently submitted both paper cards and LoTW applications and
now List of received DXCC applications shows my application was
received. The question is: does this concern paper cards only, or
this concerns LoTW applications as well?

Hi Art and the group,

I too have just submitted a paper application, (last weekend at the RSGB HF Convention) and also did a LoTW application yesterday.
I paid for the paper application, and when I did the LoTW submission, it took my card details.

Just to clarify things, I emailed the DXCC desk, and was told by Bill Moore that they call this a HYBRID.

Art, does your paperwork mention HYBRID anywhere?
As far as I can tell, the paperwork you got back from the DXCC desk should be ALL of the cards, both paper and LoTW.

Mine has not yet been processed as Wayne Mills hasn't yet got back to work, but I would imagine you should be able to check on the LoTW website, and see which countries you now have confirmed.
If you check a few of the ones submitted via LoTW, you should be able to tell quite easily.
That is what I am hoping for too!

I am very impressed with LoTW, and it seems quite user-friendly for the most part, BUT..... I wish I could select RTTY ONLY in the list when you get to the stage of selecting contacts to confirm.
I'm not really interested in anything else, so do not need to see a complete list of matches.

If you can confirm the above Art, it would be useful to let us know.

Very best 73

Phil et al.

I just got my statement back from DXCC desk. It also was a HYBRID application, hardcards and LoTW.

No where on the DXCC Credit Slip, the sheet that shows the totals and how many were credited, does the word HYBRID appear.

Nor is there any indication on the sheet that it was a combination Hardcard/LoTW submission.

But the numbers were right.

1665. RE: [ARRL-LOTW] RE: RX9TX list of received applications

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-10-26 22:32:48 UTC
From: m5aex (Andrew)
Topic: 1662 Message: 1665

Hi

I have recently completed a DXCC 20m submission, partly paper and partly LotW. The DXCC Award Credit Slip that arrived by post is clearly a hybrid as the numbers all add up correctly but no where is it marked HYBRID.

Additionally, the DXCCs I used through LotW have not yet been moved from 'Applied' to 'Awarded', even though the application was processed 3 weeks ago. So, I guess there is some delay in linking the paper and LotW systems together.

Andrew M5AEX

Subject: [ARRL-LOTW] RE: RX9TX list of received applications

Hi Art and the group,

I too have just submitted a paper application, (last weekend at the RSGB HF Convention) and also did a LoTW application yesterday.
I paid for the paper application, and when I did the LoTW submission, it took my card details.

Just to clarify things, I emailed the DXCC desk, and was told by Bill Moore that they call this a HYBRID.

Art, does your paperwork mention HYBRID anywhere?
As far as I can tell, the paperwork you got back from the DXCC desk should be ALL of the cards, both paper and LoTW.

Mine has not yet been processed as Wayne Mills hasn't yet got back to work, but I would imagine you should be able to check on the LoTW website, and see which countries you now have confirmed.
If you check a few of the ones submitted via LoTW, you should be able to tell quite easily.
That is what I am hoping for too!

I am very impressed with LoTW, and it seems quite user-friendly for the most part, BUT.......... I wish I could select RTTY ONLY in the list when you get to the stage of selecting contacts to confirm.
I'm not really interested in anything else, so do not need to see a complete list of matches.

If you can confirm the above Art, it would be useful to let us know.

Very best 73

Hi Phil -- take a look at the section on the LoTW home page that is
titled "Applying for DXCC Credits with Logbook of the World" and then
scroll down to 5. The Application. It discusses exactly how to apply
just for RTTY, CW, etc.

--- In ARRL-LOTW@yahoogroups.com, "C.M. Christensen"
<cchrisac0m@c...> wrote:

I may be the lucky one but had no problems when I submitted
a "hybrid" as it seems to be called now. I submitted the application
on the LOTW web site for both cards and LOTW the same day I put the
cards in the mail. I paid for both on the LOTW site. I saw the LOTW
credits go up almost immediately and the cards were added to the
record about two weeks later. The whole works was done in record
time.

The way I think it works is that the only thing common in the system
is that you can pay for both on the LOTW site and the DXCC award
credits are shown for both QSL methods. ARRL stated that LOTW is
entirely seperate from the awards programs administration. I can
understand a number of reasons why they would want it that way but it
is obvious that they are somewhat entwined. I believe they also said
that the LOTW was a different department than the card checkers. As
the paper that comes back is presumedly from the awards department it
would contain all credits and probably comes from the same database
that is presented in the LOTW web site. The awards people don't care
about the QSL method, just that they exist somewhere.

It sounds like there are three departments involved and maybe they
get out of sync occasionally.

Topic: 1669 Message: 1669

My Hybrid submission was processed, and I was charged, on the 11th.

But by LoTW Awards stats still shows that application as 'sent'.

But here's the odd part, The Challenge totals on the LoTW Awards module reflect the addition of the LoTW qsl's.

And an even odder part, Yesterday, I had 11 more LoTW qsls in the Challenge/Selected box. This afternoon, I only have 10.

A computer gremlin stole one of my LoTW qsl's....

But after studying the page and my DXCC readout....I 'THINK' I know what happened.
I had a couple of hardcards rejected as dupes on 10 meters.
Even though I'd put postit notes indicating these were 10 mHz, not 10 meters, the data entry person must have missed it.
DXCC desk saw the mix-up and applied these to my 30 meter totals.
This removed one of the LoTW qsls from contention as it now became a dupe for one of the reinstated hardcards. Hence my LoTW number dropped by one.

I wish I could submit all the LoTW qsls I've accumulated since the last submission, but till it's 'cleared' off the system is tells me I can't.

Now that I think I understand this...I have a headache.
Which should I reach for? The 9.3% Polish imported beer....or the bottle of Bayer?????

Once a job is fouled up, anything done to improve it only makes it worse.

Bill H. in Chicagoland

Hello russiandx,

I have sent my paper cards to ARRL HQ on October 2, and submitted LoTW application on October 17, and today, October 29, "Application history" page shows its status "Finished". Both hardcards and LoTW confirmations were processed and put into the credits listing. Pretty fast, thanks to the LoTW team!

BTW "List of received applications" page still says "DXCC is currently mailing applications logged during the week of September 24, 2004", so I think they are really 3 weeks ahead of what the website states.

Maybe someone can help.

1.) I have purchased 500 payment credits.
2.) I show a number of "selected" contacts under awards.
3.) These selected contacts don't seem to be applied after months of waiting and checking various boxes.
4.) Do I need to apply for a specific award before they are applied?

Any help would be appreciated.

Dave,

You need to submit them as a to get Credit.

You need to go to the Application page to submit them for DXCC credit.

There will be an additional DXCC application charge likely.

From: Gerry Hohn
Topic: 1674 Message: 1674

One of the impediments for DXpeditions to put their logs onto the LoTW is the potential (and likely) loss of contributions that are included by many with their paper QSL requests. In many cases, these contributions are key to mounting increasingly expensive operations in far away places.

One would argue that the stations worked would simply mail some funds to these DXpeditions to offset the lost income included with QSL requests. While this might be the intention of many of us, the reality is that many that would have included a few extra dollars with a card simply won't get around to sending a separate contribution. Also the increasing cost of postage discourages one from spending upwards of $2 to send $2 (or a bit more).

A thought I had was for DXpeditions to establish PayPal (or the like) accounts for contribution. This would reduce the postage overhead and make it easy for people to send contribution when the DXpedition uses the LoTW.

Just a thought.

It's my policy that if I have to send some amount of money to an OM to receive his or her card, then I simply don't send a card. When I would go on an expedition/holiday, which most likely will happen within two years, I would use the LoTW, and send regular QSL cards to any one who needs it. Because I would do this all for my own satisfaction, and not to make any profit out of it. If you don't want to pay for your dxpedition, you simply shouldn't go on dxpedition. By the way, loads of QSL printing companies do sponsor DXpeditions. An other cheap alternative is to qsl only through the buro and don't QSL direct anymore. But yes, some people don't have any patience anymore. I don't care if it takes a card 2 years to travel to my club, as long as I coming. It might be a thought to consider to pay for membership to your national club instead of sending direct QSLs with a few dollars. I don't say that people aren't allowed to pay for the QSL card. If they feel sympathy with the operators and do want to support them, hey, let them pay, but it shouldn't be mandatory for a card. I think that is what we are proud to call Ham spirit.

Since my native language is not english, some sentences may sound hard and pritty straigth forward. It is not my purpose to offend anyone, nor to say I'm the only one who is right, I just want to spread my idea among other users of this group

Ben... with all respect, I disagree with you. Without financial support, many DXpeditions simply
would not happen. The DX Societies and Clubs and Foundations help, but the contributions of thousands of DXers worldwide is essential also. It's true that the ops who go to these remote places
do it "for love", but nobody "makes a profit" on a DXpedition... it's just too costly. (Not to
mention, sometimes it's also dangerous...some of the guys put their lives on the line!!) And in
almost all cases, by far the biggest piece of the cost is borne by the ops themselves.

I have never seen a notice from a DXpedition that money from a DXer is "required" in order to get a
card. DXers send a buck or two (or five) as a VOLUNTARY gesture to help pay some of the costs, not
to "buy a card". OK, maybe it's a difference of how you look at it, but how many DXers truly cannot
afford to send a couple of bucks with a request for a QSL from an exotic island halfway around the
world? It's not required, merely desired.

Not only that, but there's hams that live in places like JT or A5 or 5X and many others that can
probably use some help in upgrading their rigs and antennas, so they can stay on the air and hand
out QSL's to the rest of us. If we can, we should help, to the best of our individual ability, as a
gesture of international friendship.

My two cents.....73, Jerry K3BZ

Jerry,

that's not what I'm trying to explain. I'm just afraid that if we install a PayPal box at the LoTW page, paying can become mandatory before QSL-ing. I myself am working with a simple FD4 Antenna. So here at my home there is also room for improvement. I still young so I thinks this is normal, didn't we all start small. At this moment I have to spend my money in a "better" way. I'm just trying to explain my current situation before someone does install a PayPal box. I can't afford it to pay for QSL. Maybe within 30 years or so, things have been changed. I do support the idea of helping DXpeditioners. but not now.

I hope you understand my point.

Kindest Regards,

Ben ON7BS

I do understand, Ben, I was there once, and now I'm happy if my extra green stamps help the DX to
send you your card without cost to you. However, there are a lot of people who actually can afford
to send a couple of bucks but don't... they need to be reminded occasionally that DXpeditions cost
big money, and the DXpeditioners don't make any profit from the donations.

Ben,

My point was to start a discussion on how to encourage more widespread use of LoTW while providing ongoing financial support to major DXpeditions. One way may be PayPal. I'm sure there are others.

In no way is one paying for QSLs if sending a donation is voluntary. All an electronic method provide is making it easier for the contributor while not wasting contribution money on postage.

Jerry,

that's not what I'm trying to explain. I'm just afraid that if we install a PayPal box at the LoTW page, paying can become mandatory before QSL-ing. I myself am working with a simple FD4 Antenna. So here at my home there is also room for improvement. I still young so I thinks this is normal, didn't we all start small. At this moment I have to spend my money in a "better" way. I'm just trying to explain my current situation before someone does install a PayPal box. I can't afford it to pay for QSL. Maybe within 30 years or so, things have been changed. I do support the idea of helping DXpeditioners. but not now.

I hope you understand my point.

Kindest Regards,

Ben ON7BS

1681. Re: [ARRL-LOTW] DXpedition Support

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-05 00:53:28 UTC
From: FireBrick
Topic: 1674 Message: 1681

I've been following this thread. Even though I have gotten my YV0D LoTW qsls and already submitted them via LoTW, I still sent in a donation to the group. Mailed long before the logs were uploaded to LoTW.

One aspect of a PayPal system is....protection against postal pilfering.
I've been the victim of 'non delivered qsl/GS/IRC' etc.
A PayPal system would help this situation.

In 40 years of dxing, I've never experienced a 'pay for qsl' situation nor would I participate in one.

Ben,

My point was to start a discussion on how to encourage more widespread use of LoTW while providing ongoing financial support to major DXpeditions. One way may be PayPal. I'm sure there are others.

In no way is one paying for QSLs if sending a donation is voluntary. All an electronic method provide is making it easier for the contributor while not wasting contribution money on postage.

Didn't think of the postal theft situation in many countries. I've certainly experienced postal theft of my SAE + GS mailings and was only able to secure some difficult to get countries though email discussions and the kind co-operation of the DX stations/ Managers to send me cards at their expense or having them identify a secure route.

Of course this will only help hams/dxpeditioners with net access or credit card accounts.

A while back a ham in the Far East set up a Visa account system where you sent him a donation via credit card and he used that to mail back a hard card qsl.
Postal theft was the impetus I believe.

1692. How to

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-24 14:02:51 UTC
From: rlb
Topic: 1692 Message: 1692

I just received notice of renewal for my LOTW.
Progressed up to and including sending it to ARRL.
Now awaiting new certification.

Question?

It says to search for all .tq5/.tq6 files and remove.

Should I do this before getting the new file?

I only show one file and that is my .tq5 that I saved
to a folder and that has last years date.

Do you think this is the old one they are talking
about?

I do not show any .tq6 files.

Is that logical?

I do show .tq8 files.

What is that and should that one be left alone?

After sending the request in what do you find is the
next step in the procedure?

Thanks for your help in advance and happy holidays to
one and all.

Randy

From: Gil Baron
Topic: 1692 Message: 1693

You want to do the delete before you start the process. It is not required but will keep you from sending the wrong file.

A tq8 is a signed file so you can delete that anytime after having sent it and if you have to recreate it by signing the file that created it. It is useless after your certificate expires.

I think I gave the correct information here but am not positive.

I think the whole process is WAY overboard in user complexity. I don't understand why a certificate should expire in a year, ludicrous in my opinion.

Gil,

Thanks for the info. Got it loaded ok. I'm with you
about it being overboard renewing it every year.
Seems like there would be a better way.

Thanks again,

Randy

Because of that user complexity, I have just about given up on LOTW. It's just too much trouble. Why
all the "security" anyway?

I didn't see that message and am kind of shocked.

I must admit that I made a few mistakes, but they were correctable when reread the instructions.

And if a Blind Wino like me can manage my calls and all the stations I manage....ANYBODY CAN DO IT.

Sorry... my mind has a few bad sectors.

I've been waiting and watching for some improvement in the LOTW way of doing things. I've written
several e-mails about it. So far, no response. I have a cert, I've uploaded and downloaded and I
feel I've given LOTW a good try. I didn't just look it over and reject it, I gave it a shot. Based
on the results and how much time and effort it takes to operate LOTW, I've tentatively concluded
that it is too much for too little return. I bet I'm not the only one that is nearly ready to write
LOTW off, either. But you notice I say "tentative" and "nearly"... I could still be convinced... but
it would take ARRL making some very significant improvements in the way we have to interface with
the LOTW system. If it's all those layers of "security" that are making it so darned complicated,
I'm wondering... is all that really necessary? Why?

Bill... I think requesting the cards from the DX works a lot better than LOTW. It costs more money,
but less aggravation. It's not that it's impossible to make it work, just much more of a pain than
it needs to be. Maybe if I were more of a "blind wino" I wouldn't mind so much :-)

>Because of that user complexity, I have just about given up on LOTW.
>It's just too much trouble.

Doesn't seem like much complexity to me. I think they've done a very good job in providing some real traceability for QSLs. (But I'm used to things like this because I have to go through the same applying for a new certificate once a year to be able to e-mail some of my customers. At least ARRL isn't charging $100 per year for each certificate like the company I'm forced to deal with does. It could be much worse.)

>Why all the "security" anyway?

See above. If you don't have accountability, you don't know if the QSLs are trustworthy. If nobody can be tracked, anybody can upload QSLs. Wanna buy a P5XX qsl from me? And if you don't think that sort of abuse will happen, you're naive. It HAS happened.

The history of attempts to cheat in the DXCC program proves that the security is necessary. Why do you think that field checkers can't check 160M QSOs? It's because of fraudulent QSL attempts. Unfortunately, some people WILL cheat if they think they can't get caught. With LoTW, it may be cumbersome, but I can't come up with a better scheme.

Now, I'll agree that the one year expiration period is quite short - for what we're doing, having certificates reissued once every five years wouldn't really compromise anything.

Nor would it really compromise much if the LOTW system worked nice and easy like, say, e-qsl... for
example. If a few bums managed to cheat, so what? They would know who they are, and how would that
diminish anything for those of us that do it fair and square? It's not a case of "nobody can be
tracked", it's that a few might not be able to be tracked. They are making the system like the eye
of a needle... in a misguided attempt to make it beyond question, they are making it beyond reasonable reach. But then, those that manage to make it work can always say "if I can do it, anyone
ought to be able to"... with the implication that anyone that has difficulty with it must be inept.
I don't buy that. And if you were having trouble with it, you wouldn't either.

So tell me, why can't LOTW work more like e-qsl?

OK, why is LoTW harder than eQSL? In both cases, you've got to get a logfile in computer readable form, which is the hardest part (because you've got to enter the data into some logging program). For eQSL, you upload that log file directly. For LoTW you sign it, then you upload it. That's it - one extra step. Yes, the certification process isn't quick, but it's painless for US hams at least.

>If a few bums managed to cheat, so what?

Because it's cheating. What good is an award if anyone can game it? ARRL understands that the integrity of the program is paramount and I agree.

>They would know who they are, and how would that diminish anything for

Again, what's "beyond reasonable reach" for LoTW? What problem are you having? We'll be happy to help you make it easy if you explain what the problem is. The signature step isn't an excessive burden as far as I can see, but there may be an opportunity to improve the documentation if we can help the League to understand what steps are unclear.

>But then, those that manage to make it work can always say "if I can
>do it, anyone
>ought to be able to"... with the implication that anyone that has
>difficulty with it must be inept.

No, that's not the point. I understand that computer software is often difficult to understand, and that the developers of that software always think it's easy to use - but it takes concrete suggestions to make it better. "Beyond reasonable reach" isn't a suggestion, it's a dismissal. If you can use eQSL there is no reason you can't use TQSL - maybe with some help, but that help is available if you wish to accept it.

>I don't buy that. And if you were having trouble with it, you wouldn't
>either.
>
>So tell me, why can't LOTW work more like e-qsl?

Because eQSL is wide open to fraud, perhaps?
-Rick

Topic: 1692 Message: 1703

"Because eQSL is wide open to fraud, perhaps?"

That's not what I've heard. It's the same crosseyed reasoning that won't let field checkers approve
160M QSL's... the fear that a few cheaters will somehow diminish the value of the topband DXCC
achievement. The only value cheaters diminish is their own. BTW, from what I heard there were only a
very few 160M cards that were shown to have been changed, but topbanders are ham radio's elite, and
they have lots of clout at the ARRL.

"What good is an award if anyone can game it?"
First of all, making LOTW more user-friendly doesn't mean "anyone can game it." Maybe a few could,
but probably most couldn't. And of those that could, probably most would not. There are many who lie
about their college degree, but that doesn't diminish the accomplishment of those who actually
earned theirs. People lie about their military service, and all sorts of other personal accomplishments. There will always be those who cheat, or try to cheat. Let them, they only hurt
themselves. Whoever said "Winners don't cheat, and cheaters don't win." made the point nicely
enough.

But at this point, we've both had our say, and it's time to move on. Thanks for the memories ;-) and
the very best of the Holiday to you and yours.

1704. Re: [ARRL-LOTW] How to

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-25 06:03:18 UTC
From: Ted Demopoulos
Topic: 1692 Message: 1704

The amount of security something like LOTW has is a business decision that follows a careful risk analysis. All security decisions are - or should be.

The strength of DXCC, and the reason for its immense popularity, is quite simply its reputation. Although it's well known that a few cheats have existed and been caught, and certainly some trivial cheating is easy (like a fake confirmation for G on 10M), cheating at a significant level (like going from 100 to 320 countries - err "entities") is probably tougher than working them, and the perpetrators would most likely get caught.

Although each individual may or may not care about DXCC's reputation for integrity, I'm going to take a wild guess (and a somewhat informed one) that the ARRL membership as a whole does, or at least those that care about DXCC. The ARRL does regular statistically valid polling of its members using companies that special in this kind of thing, and knows what its membership thinks as a whole.

I wish LOTW was easier to use. I wish computers were easier to use!!! Before getting back to security, I was fascinated by and worked with human-computer interfaces for a while, and decided they ALL suck. I wish the car I bought my wife today was easier to use - it seems to have about 100 microprocessors in it and requires reading the manual (even the keys have chips in them). The interface on my refrigerator is about right . . . .

Security is about tradeoffs. The biggest one being with useability. I think the ARRL has done a great job. I wish they could afford a full time support staff for LOTW, but I'll bet that's simply not economically feasible at this time. The support does seem decent, doesn't it?

And yes, I did have something to do with the development of LOTW. And I am also a Luddite and ardent fan of paper QSLs as well.

Have a great Thanksgiving everyone, and for those with my particular disease, have a fantastic CQWW!

1708. Re: [ARRL-LOTW] How to

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-25 15:06:13 UTC
From: rlb
Topic: 1692 Message: 1708

Having written the original post I feel that thank goodness for this group that seems to take the time and effort to help each other out. I wrote the post prior to trying to renew based on previous experience and frustration from the original certf download and installation.
Thanks to the people that responded this was a pain free installation.

For us people that have basically self learned computers it can be a mind boogling task.

Kind of puts me in mind of a incident that happened to my wife's parents a couple of yrs ago when they were trying to set up their sat. TV system. After becoming totally frustrated they gave me a call to see it I could help, I did the next best thing!!!I sent my 9 year old grandson over to program it. He did it in less than 10 min.

Lesson learned?????Maybe before trying and installing LOTW have your children or grandchildren take a look at it?????

Happy Holidays to all of you on the list and thanks again for the help.

Jerry do you use LOTW with a logging program or have you been using it through the web site interface? I think it's much easier to use with a good logging program such as LOGic7. What do others think about this.

1710. Re: [ARRL-LOTW] How to

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-25 16:08:19 UTC
From: Carl Smidt
Topic: 1692 Message: 1710

My ONLY frustrations with LoTW is the VERY few that use it, my returns are dismal. What a shame!

Up and downloading of data is a cinch with a good logging program like, for example, LOGic 7, of Personal Database Applications.
A couple of clicks and you are done, I upload my log data every few days, takes about 30 seconds.

Renewing a certificate, once a year, is a lot easier than operating some of our new transceivers to their full design advantage, plus it saves on registered mail submission costs
and relying on the postal service to assure delivery of our precious, irreplaceable, cards.

Julio,

I agree with you on using a logging program to upload.
I use n3fjp's program, just a matter of hitting about
3 buttons one you have it setup.

1713. Re: How to

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-25 18:07:52 UTC
From: Dave Bernstein
Topic: 1692 Message: 1713

As a software developer, I am dissapointed with user comments of the form "it works for me, what are you complaining about?". The goal of user-friendly software is not "one user is happy with the application", its "no users are unhappy with the application". Criticizing a user who expresses frustration will only discourage other users from reporting the problems they encounter -- the information most needed to improve the application.

LotW's useability problems do not lie in the primary use cases -- uploading QSOs, and downloading QSLs. As has been pointed out, logging applications can automate these and let the user initiate them with simple gestures.

In my experience, the primary problems are:

1. TQSLCert performs no reasonability checking when establishing the user's QTH. Thus if OH2BH specifies his CQ zone as 18 and his ITU zone as 15 -- reversing the correct values -- all QSOs subsequently uploaded will bear incorrect zones. As a result, ops downloading matched QSLs with OH2BH will either pollute their logbooks with incorrect zone credits or, if their logging software detects the error, be required to manually correct the entries. About 15% of the QSLs I download from LotW bear incorrect information.

2. Renewing a certificate is too complicated for some users

3. Moving a certificate from one PC to another is too complicated for some users

4. Requiring users to differentiate between obscurely-tagged file types (.tq5, .tq6, etc.) causes errors of confusion

5. There remains at least one showstopper defect; it prevented me from submitting LotW credits for 3 months until LotW personnel manually worked around it from their end.

There is also important functionality that's missing:

1. Can't upload a submission from a logging application - a set of LotW QSLs to be credited to one's DXCC account

2. Can't download one's DXCC credit report in a form that a logging application can use to synchronize with its status reporting (the analog to synchronizing with LotW's confirmation report)

Having worked with LotW and its developers since before its release, I'm certain that the primary issue is development resources. The LotW team has worked long and hard to get LotW to this point; they

are evidently responsible for its operation, as well as its maintenance and continued expansion. Given their constraints, they have done amazingly well. However, cutting off feedback by criticizing those who report problems serves this team -- and LotW -- poorly.

73,

Dave, AA6YQ

I agree, when the criticism is constructive. Most of it hasn't been.

"It's too hard to use" and "why can't it be like eQSL.cc?" aren't enough
information to use to solve any real problems.

Aren't these all caused by lack of integration with logging software?
Perhaps I'm wrong but it seems like the TQSL/TQSLCERT programs are good
demonstrators of the tqsllib API, though not great programs for end
users to use directly. Proper integration with logging software
should make all of the above simpler.

>>>Yes, it would be nice if users always filed dispassionate, detail-laden defect and useability reports, but since they are not software testing professionals, this will often not be the case. Our response should be to coax out the needed information, not castigate an already-frustrated user. If you want constructive criticism, set the example by responding constructively no matter how ambiguous or provocative the user's initial volley may be.

>> In my experience, the primary problems are:

>>>snip<<<

> Aren't these all caused by lack of integration with logging software? Perhaps I'm wrong but it seems like the TQSL/TQSLCERT programs are good demonstrators of the tqsllib API, though not great programs for end users to use directly. Proper integration with logging software should make all of the above simpler.

>>>Some of the above problems -- incorrect QTH data, for example -- could be mitigated via integration with logging applications. User awareness of file types is locked in by the web-hosted portion of LotW. Submitting and synchronizing credits cannot be accomplished until LotW provides the required functionality.

>>>Its not obvious that administrative functions like creating, renewing, and moving certificates would be better implemented by multiple logging applications. An improved administrative application utilized by all LotW users would be easier for LotW personnel to support, and would facilitate more rapid evolution. In this case, incrementally improving the useability of TQSL/TSLCERT seems the better path.

As the user around whose criticism this discussion has evolved, I admit my comments were not very
direct or constructive.

It is fortunate, however, that the contributions of other reflector members have risen above my
poorly conceived remarks... in particular, I think those of Dave Bernstein AA6YQ hit the target
pretty well dead center. That's probably because Dave knows what he's talking about... whereas I,
regrettably, really didn't and shouldn't have spoken out on this subject as I did.

The truth is, I don't think I've yet given LOTW my best efforts. Too bad I didn't realize that
before I got things going, but perhaps my impatient mistake helped draw out something useful.

73, Jerry K3BZ

1717. I put some more old logs onto LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-11-26 15:24:11 UTC
From: FireBrick
Topic: 1717 Message: 1717

Got some more old logs for the stations I manage up onto LoTW.

Back from 1989 and 1998.

Hope they find their way to the deserving.

The Meek shall inherit the earth....after I'm through with it.

Bill H. in Chicagoland

I uploaded 1500 qso's from Sweepstakes SSB. Had 178 qsl's immediately.

FYI...
I have had 48 states worked on LOTW for about a year. Now have South Carolina thanks to W8CNL.. Still need a North Dakota who uses LOTW

You must know the right stations to work. I turned in about 1200
QSO's with a grand total of 1 confirmation from K1ZZ. I'm sure that
will improve over the next few weeks. But,I'm still hovering around a
6% return rate overall.

I have uploaded over 5k qso's and have found that 90 % of the rtty ops use lotw and 50% of the cw ops. and 95% of all my confirmed qso's are those made during contests. shame. wish more would just upload their logs.

I was encouraged to see the following in the "What have we been up to" article at the ARRL website...

"DXCC Program Manager Bill Moore, NC1L, checked cards for DXCC and gave two talks at the ARI national convention in Pescara, Italy. "

Although the report doesn't include a mention of LOTW, I'm sure Bill presented the nuts-and-bolts of how it works. Way-to-go ARRL! We need more of this...

How do you come to the conclusion that LOTW was promoted here? As you noted there is no mention of LoTW at all.

At the last Dayton convention there was plenty of ARRL - DXCC staff present. None of them seemed to want to talk about LOTW. When asked why there was no LOTW booth the reply was "We didn't think about it."

I don't know if the ARRL isn't promoting LoTW more because they really didn't want it in the first place or because there just isn't money in the budget.

I agree with the subject line "Promote or perish" but I think its going to have to be us the Users of LoTW that do the promoting. I've seen lots of RTTY guys do just that with their final - "73's QSL via LoTW".

From: dl6fcb
Topic: 1724 Message: 1724

I made a hybrid application about three weeks ago. Yesterday i
received a message in LOTW, that my application has been finished by
DXCC Desk. That means for me, that they put my paper QSL credits into
their database. My first question is, when do the paper QSL credits
appear in the LOTW facility ? Another question, once i own the award,
may i mail all my paper QSLs to ARRL ? Are there any limitations ?

FYI, i uploaded about 2400 QSO and got 192 QSL records until now.

TNX,

I believe you need to do a linking of your LOTW account wiht your DXCC
record. I know I had to after I submitted my first hybrid application.
~ I kind of expected that they would go ahead and do the link as part of
processing the application(I just did a hybrid application, I'm
obviously using LOTW), but they don't. Treat it as though you already
had DXCC and you need to link your LOTW account to the DXCC records.

It came through just fine Bill. It would be interesting to see a
breakdown of contest vs non contest qso's and DX vs stateside qso's.
I find that the contesters get their logs into LoTW rapidly but the
DXers are a lot slower.

Not sure How I'd do dat. :-)
As I chase both DX and contest.
but I do believe your right, Contesters are more likely to be computer controlled/logged
so more likely to submit.

1732. question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-07 19:24:01 UTC
From: rlb
Topic: 1732 Message: 1732

I have been on another board trying to promote LOTW
and the following question came up. Maybe one of you
can answer for me and I will send on to the person
asking.

Hi Group

I just took a look at some of the info on LOTW on the
ARRLWeb page. Quite
a few of my contacts are while mobile or from mobile
operators. From what
I see LOTW is pretty complicated when it comes to
setting up certificates
and locations as they call it. Correct me if I am
wrong but it seems I
would have to basically set up an account /
certificate for all the call
signs I have ever held and a location for everywhere I
have ever operated
mobile or portable. For some reason that seems to be
an awful lot of work.
If I understand that right I would have to set up
certificates for at least
13 or 15 locations being I have operated mobile or
portable in at least 13
or 15 states. Maybe someone can give me some insight
on how easy or hard it
is to do that?

From: rojomn
Topic: 1732 Message: 1733

Unfortunately, if you don't use the same call in each location that is true and a huge hole in the usability of LotW, it is really designed for fixed stations. Some real design work is needed here!
At leat that is my intepretation.

Now the only answer I see is to use the same call for all of the work. This will of course lead to problems when new awards are added that require you to be in a particular grid square, state, county etc. I don't know the answer and I think the designers are having huge nightmares trying to solve this, or should be having them.

1734. RE: [ARRL-LOTW] question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-07 21:13:18 UTC
From: Patton, David NN1N
Topic: 1732 Message: 1734

All the correct information is on the LoTW FAQ pages.

One of the basic tenets of LoTW is that each different callsign should have a certificate. AF4LD needs a certificate, and AF4LD/0 needs a certificate.

See: https://www.arrl.org/lotw/faq#samedxcc

It is a simple matter to set-up station locations for as many places as you want (note that these are Station Locations in TQSL, not certificates).

It's easier than filling out QSLs for each County and Grid--unless he just sends the same QSL card from his home station with its home grid square and county, no matter that he didn't operate there.

And it's always better to spew mis-information if you don't know the answer. :-)

You are correct and in my post I also pointed it out indirectly. I said IF the call is different THEN you have this ridiculous situation. It ought to be possible to have a certificate for ALL calls owned by a PARTICULAR person. It OUGHT to be the COMPUTER and NOT the person that could take care of validating the contact for an award. That is what computers COULD be good at.

I have very little trouble determining if a card that get is good for a particular award, the computer should be able to do that too. It is the ridiculous situation of tie of the certificate to the call only that causes this situation. There MUST be a better (read easier) way?

One of the basic tenets of LoTW is that each different callsign should have a certificate. AF4LD needs a certificate, and AF4LD/0 needs a certificate.

See: https://www.arrl.org/lotw/faq#samedxcc

It is a simple matter to set-up station locations for as many places as you want (note that these are Station Locations in TQSL, not certificates).

It's easier than filling out QSLs for each County and Grid--unless he just sends the same QSL card from his home station with its home grid square and county, no matter that he didn't operate there.

And it's always better to spew mis-information if you don't know the answer.
:-)

Subject: [ARRL-LOTW] question

I have been on another board trying to promote LOTW
and the following question came up. Maybe one of you
can answer for me and I will send on to the person
asking.

Hi Group

I just took a look at some of the info on LOTW on the
ARRLWeb page. Quite
a few of my contacts are while mobile or from mobile
operators. From what
I see LOTW is pretty complicated when it comes to
setting up certificates
and locations as they call it. Correct me if I am
wrong but it seems I
would have to basically set up an account /
certificate for all the call
signs I have ever held and a location for everywhere I
have ever operated
mobile or portable. For some reason that seems to be
an awful lot of work.
If I understand that right I would have to set up
certificates for at least
13 or 15 locations being I have operated mobile or
portable in at least 13
or 15 states. Maybe someone can give me some insight
on how easy or hard it
is to do that?

Topic: 1732 Message: 1737

I have long tried to build databases using the "Vulcan mind meld" to intuit data.
Perhaps you have succeeded?

Jim

You are correct and in my post I also pointed it out indirectly. I said IF the call is different THEN you have this ridiculous situation. It ought to be possible to have a certificate for ALL calls owned by a PARTICULAR person. It OUGHT to be the COMPUTER and NOT the person that could take care of validating the contact for an award. That is what computers COULD be good at.

I have very little trouble determining if a card that get is good for a particular award, the computer should be able to do that too. It is the ridiculous situation of tie of the certificate to the call only that causes this situation. There MUST be a better (read easier) way?

1739. Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-08 16:51:05 UTC
From: rlb
Topic: 1739 Message: 1739

I receive an e-mail letter from our ARRL Great Lakes Division director on occasion and the following was in todays e-mail. I will be reponding to him but wonder if any others in different divisions are getting this?

LOGBOOK OF THE WORLD

I request your input on the Logbook of The World (LoTW). If you have
not attempted to use LoTW, yet, you can skip to the following topic if
you wish. My question is directed ONLY to members who have tried
Logbook.

The question is simply, "What has been your experience with LoTW?" I
need you to answer this question with one of the 6 answers I give,
below. If you wish to add a written explanation of your experience
please do so, but please be certain to use the written answer only to
expand on your numeric answer. The numeric answers are:

5. LoTW was a snap to install and use. I like everything about it.

4. LoTW was moderately easy to install and to use. I like most things
about it and will continue to use it.

3. LoTW is OK. I had some difficulty installing it and in getting it to
work for me. I'll keep using it.

2. LoTW caused me a moderate level of problems to install, but is easy
to use. I'll keep using it in spite of the initial difficulty I had.

1. LoTW has been a pain to install and nearly as much of a pain to use.
I'm thinking of not using it.

0. LoTW has been so much difficulty to install or use
that I've given up
on it.

Again, please answer the question ONLY if you have
attempted to or
succeeded to install and use LoTW. Also, please use
the numeric answer
that best states your position/experience with LoTW.
Feel free to
append written discussion beneath your numeric answer
if you choose to
expand on the numeric answer.

From: Jerry Keller
Topic: 1739 Message: 1740

Randy... put me in for #1

Comment: LoTW is a great idea, but it seems to me that there's so much effort at being "secure" that
it's been made "a real pain". Why not issue a code number and just let people enter that (like a
credit card #) to ID themselves? I use the DXLab suite of logging programs (DXKeeper) and I can
upload to e-QSL with one keystroke. If I could do LoTW that easily, I'd definitely use LoTW.

Probably about a 2 or 3 but this is a useless survey. It is obviously
written to make LotW come out smelling like a Rose!
It also misses some of the good things.
Somebody is waiting a lot of time and money on that.

From: Dave Bernstein
Topic: 1739 Message: 1742

The fact that you can't upload to LotW with a single keystroke is a current limitation of DXKeeper, not LotW.

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-08 18:40:39 UTC
From: Pete Smith
Topic: 1739 Message: 1743

Nothing similar received here so far, but if this was an action coming out of the most recent Executive Committee meeting it might be that different Directors are moving at different rates of speed.

My answer would be 4.

1745. Re: [ARRL-LOTW] Re: Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-08 18:50:37 UTC
From: Jerry Keller
Topic: 1739 Message: 1745

I stand corrected. Mea culpa :-)

I still think LoTW could be made simpler to use. For example, LoTW should automatically add confirmed new ones to the user's DXCC verified list if the user has enough funds on account. It
shouldn't take more than one step.

An account number and a password on a https secure site is good enough for a credit card transaction, and it should be good enough for LoTW. If there's really any need for more security,
perhaps the system should only allow users to upload from their registered computer address or
something transparent like that.
It's not the bleedin' Chase Manhattan Bank, is it?
Sorry. I'm recovering from the flu.

Despite everything, I still support LoTW... it's a good concept and eventually somebody will make it
work better. It too is worth waiting for.

1746. RE: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-08 19:09:57 UTC
From: Rich Holoch
Topic: 1739 Message: 1746

I also think it's a 4, but the double account "issue" has made LOTW unusable for me (i.e. I can't use LOTW credits until they merge my accounts). Their php / database developer should never have allowed a split user id / account like this for any reason - including user error in applying for a certificate renewal. The system should never send a new cert if a user is asking for one and they already have one that just needs to be renewed - it should simply renew the old one. And if a user has lost their hard drive and needs a new PKI cert, there needs to be a better way to do this than the way LOTW does.

My guess is that this problem is causing a nightmare for the DXCC staff who have to merge user accounts and data while maintaining data integrity. And I want LOTW to succeed - very much so. But this is a real problem.

Randy... put me in for #1

Comment: LoTW is a great idea, but it seems to me that there's so much
effort at being "secure" that
it's been made "a real pain". Why not issue a code number and just let
people enter that (like a
credit card #) to ID themselves? I use the DXLab suite of logging programs
(DXKeeper) and I can
upload to e-QSL with one keystroke. If I could do LoTW that easily, I'd
definitely use LoTW.

1749. RE: [ARRL-LOTW] Re: Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-08 21:10:30 UTC
From: Joe Subich, K4IK
Topic: 1739 Message: 1749

> For example, LoTW should automatically add confirmed new
> ones to the user's DXCC verified list if the user has
> enough funds on account. It shouldn't take more than
> one step.

I don't want LotW to automatically add new ones to my DXCC list. I may have another card in hand that I'm planning to submit as part of an annual submission ... in that case I don't want to waste the credits on something I don't need.

> An account number and a password on a https secure site is
> good enough for a credit card transaction, and it should be
> good enough for LoTW.

Generally account number and password are the result of an off-line verification, unlike LotW. That whole process has been beat to death here more than once. The certificate may be overkill, and annual renewal is certainly a waste (tie it to the 10 year license term). However, LotW is 100% better than the alternative (I can qualify for eQSL.cc's basic eDX award with "bad" confirmations!).

73,

... Joe, K4IK

1750. [ARRL-LOTW] Survey

1751. Re: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-09 15:23:49 UTC
From: Gerry
Topic: 1739 Message: 1751

I'd be a number 4.

I'm reasonably computer literate so it wasn't difficult but I have had to help several other locals install and use LoTW. They would have been a 1 or 2 without the help.

My main (and have repeated this several times) issue with LoTW is the lack of participation be stations outside of North America and DXpeditions. 7,000 users out of a global total of 2.6 million amateur licences is pretty light. Yes, they are not all active DXers or even active at all but even at a 10% activity level, LoTW participation is still only 2.7%.

In my humble opinion the ARRL (with our help) need to promote this product more, make it easier to install, maintain and use plus find ways to encourage (equals support) DXpeditions to put their logs up in a timely fashion.

Gerry,

1752. Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-09 16:06:13 UTC
From: rlb
Topic: 1739 Message: 1752

To all of you that responded. I have sent your ratings on to the division director. Now it is a matter of sitting back and see what they are doing with the compiled information.

Thank you

Randy

1754. Re: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-09 19:30:12 UTC
From: Dave-GVK
Topic: 1739 Message: 1754

I do believe it's the ARRL doing the survey...NOT this user group......You
might best use you time to email your section manager, NOT this site!!!!!!!!

Yahoo! Groups Links

1755. Re: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-09 20:23:21 UTC
From: rlb
Topic: 1739 Message: 1755

Dave,

Thanks for the response, but please note that I did
state that, in the orginal post and I quote:

I receive an e-mail letter from our ARRL Great Lakes
>>> Division director on occasion and the following
was in
>>> todays e-mail. I will be reponding to him but
wonder
>>> if any others in different divisions are getting
this?

The main reason I posted this was that you don't just
have to be an ARRL member to use LOTW for uploads and
not knowing who on the list, is, I thought I would
pose the question and forward the reponses by the
number that was returned to me. Thanks again.

Randy

1756. Re: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-09 21:29:50 UTC
From: Pete Smith
Topic: 1739 Message: 1756

At this point, we don't even know if it is the ARRL, or maybe just one Director. I don't recall anyone else reporting receiving such a survey -- certainly I have not. I think it was a good idea to give him a sampling of opinion to pass on to the asker.

1757. Re: [ARRL-LOTW] Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-10 04:59:19 UTC
From: Ted Demopoulos, KT1V
Topic: 1739 Message: 1757

I think this is just one director.

I believe the ARRL conducts their surveys through specialized survey companies that among other things do various mathematical analyzes to ensure they deliver statistically accurate result.

Hi Bob
Can't you find someone in your area that is using LoTW? Once you receive
your certificiate, it only takes a few minutes to convert a contest, QSOs,
etc to an ADIF file and submit to the AARL. Once you join, you will probably
find that you have a big bunch of QSLs just waiting for you on LoTW.

Randy, et. al,

Tnx for the input. Just to set the record straight, the survey Randy mentioned is being done by me. I use such periodic surveys to help me understand the thinking and mood of the Great Lakes Division members. I also listen to non-members, but it is the members who elect me and who support ARRL. Therefore, my obligation to non-members ends at the point at which I do not consider their input useful to protecting and enhancing Amateur Radio.

Frankly, there would be no Amateur Radio without a strong national organization to fight for the welfare of Amateur Radio. Therefore, I feel a personal obligation to the members and to the members, only. If anyone takes issue with this, just stop and think a minute. Would you expect the Masonic Order or the Knights of Columbus, for example, would listen to someone who does not belong to their organization? And, moreover, why should they.

Join and be counted. Join and add your support to the only organization in this country that has the interest and capability to represent Amateur Radio before the FCC, the US Congress and the several State and Local organizations. Join and have your opinions receive serious consideration. This is a democratic organization that ultimately is subject to the will of its members.

'Nuf said. 73,

Jim, K8JE
Director, Great Lakes Division, ARRL

Bob,
If you're having problems, feel free to send me an e-mail - I'll be
happy to help you work through the problems you're having if I can.
Also, there's certainly other people on this list that can help you
work through whatever problems you're having.

Bob,
There is only one underwater stone in setting up of the LoTW. If for whatever reason you once failed to install the certificate on your machine, before preparing of a new cert request you have to clean up your harddrive from all previous .tq5, tq6 files. It means, all of them. I even delete all E-Mail messages with these files enclosed, although they are not directly seen by a file manager or whatever. The rest is so straight forward that it's really very difficult to make any mistake.

The yours truly is not an IT guy at all (graduated as a mechanical engineer and in business administration), although there was no problem to install the system easily and quickly. Further to that I have published a series of articles in several magazines, mostly Russian speaking ones, on the LoTW setting up and quite a lot of people have successfully installed it and use it following the recommendations. Most of this people are barely speaking English and reading the English interface might be a challenge for them, but the system worked fine even for them.

Just try it again from the very beginning (fresh tq5, tq6) and it must work for you.

GL and 73,
Vladimir EU1SA

1763. survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-11 15:28:46 UTC
From: ke7gi
Topic: 1763 Message: 1763

Put me in #4. I like and use LOTW quite a bit--but it is not always clear to me how to do a specific step. Maybe simpler directions?

73, Dave Ke7gi

1764. LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-11 17:15:11 UTC
From: William D.Storer
Topic: 1201 Message: 1764

I find the LOTW system quite easy to use.

Put me in at 4.

Bill KF8HR

1765. Survey

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-12 02:58:29 UTC
From: Gary Stilwell

Gary,

You didn't miss the survey. I sent it to ARRL members in the Great Lakes Division, only. It is one in a series of periodic surveys I take of members in the Division I represent. The purpose of these surveys is to learn the opinions, suggestions and general attitude of the Division consituency on a variety of issues.

I do much of my opinion gathering through my monthly (or so) E-mail newsletters to Division members. Other Directors use a variety of methods to determine the thinking of members in their respective Divisions, and this is fine.

Incidentally, in answer to a number of questions and comments placed on this reflector, LoTW is fully operational and linked to DXCC. It soon will begin to be promoted throughout the world. Insofar as I am concerned, Dave Patton, NN1N and Wayne Mills, N7NG and others of our HQ staff have done great jobs of getting a highly complicated program operating so well. Look for linkage with other ARRL awards to come along as time and budget permit.

Does LoTW perfectly? It works extremely well; however, nothing in this world works perfectly. There even is error in the atomic clock.

73,

Jim, K8JE
Director, Great Lakes Division, ARRL

I concur with your comments. I have been using LOTW for about a year now and like it very much. My only suggestions are that it should be promoted (noted) and WAS applications should be available. That being said I realize the tremendous amount of work and dedication devoted to this project. Congratulations to those who are diligently working to make it happen.
My only hiccups have been self inflicted and with a phone call to HQ I was able to speak with Wayne and straighten it out in short order.

1769. LoTW user accounts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-14 22:40:59 UTC
From: Patton, David NN1N
Topic: 1769 Message: 1769

Thanks for your work Vlad! Hope to see you in Germany again next year.

For everyone's information, we have succeeded in merging most accounts for those who had more than one. There was a glitch in the email alert in that we delivered the wrong password information. If anyone has difficulties logging into the usersite after the mergers, please send an email to lotw-help@... and we will straighten it out.

Further, there will be no more "numbered, additional accounts," as Jon, KE3Z, gave us a new tool so that we can add a new certificate to an existing account. Merging these accounts turned out to be non-trivial, but it looks good now.

As we can all tell, LoTW is a long-term, in fact, never ending project that will continue to improve for both the user and the administrators. Our time is split among many, many jobs at HQ, so LoTW work gets scheduled-in like anything else.

We have been taking notes about things people have had difficulty with and are always making wish lists for a future release of TQSL. Providing (or forcing) the back-up of certificates and private keys and their associated passwords is about number one on the list. Streamlining the signing process is close to the top. Providing awards data back to the logging programs is high up there also. And the next award to be supported will be WAS and its many variants. When we started thinking about WAS we realized that our rules for the award hamper the ease of LoTW i.e., the rule that says all QSOs must be made from within 50 miles of one location. Automating this process in LoTW is going to be a challenge, but we have some good ideas in place.

73, Dave, NN1N

Bob,
There is only one underwater stone in setting up of the LoTW. If for whatever reason you once failed to install the certificate on your machine, before preparing of a new cert request you have to clean up your harddrive from all previous .tq5, tq6 files. It means, all of them. I even delete all E-Mail messages with these files enclosed, although they are not directly seen by a file manager or whatever. The rest is so straight forward that it's really very difficult to make any mistake.

The yours truly is not an IT guy at all (graduated as a mechanical engineer and in business administration), although there was no problem to install the system easily and quickly. Further to that I have published a series of articles in several magazines, mostly Russian speaking ones, on the LoTW setting up and quite a lot of people have successfully installed it and use

it following the recommendations. Most of this people are barely speaking English and reading the English interface might be a challenge for them, but the system worked fine even for them.

Just try it again from the very beginning (fresh tq5, tq6) and it must work for you.

GL and 73,
Vladimir EU1SA

Thanks for your work Vlad! Hope to see you in Germany again next year.

Hi Dave,
It's my pleasure. BTW my series of articles was published in "Radioamateur. HF and VHF" (Belarus), "Radiomir. HF and VHF" (Russia), "Radiohobby" (Ukraine) and MK QTC (Poland). The complete (united) article in Russian is available at www.qsl.net/eu1sa/lotw.htm , so if somebody from the Russian speaking world approaches you in respect of LoTW, you can re-direct him to this site for a basic info (I do hope, it will not harm LoTW so badly...).

Hope to see you next summer,

73,
Vladimir EU1SA

1773. question about qsl search

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-12-23 14:20:55 UTC
From: FireBrick
Topic: 1773 Message: 1773

I've noticed this frequently.
If I search for 'Recent QSL'S' on the LoTW site using my present call,
I get a pretty quick return.
but
If I search for 'Recent QSL'S on the site for one of my older calls,
it takes a moment or two to complete the search.

Just for curiosity, I'm wondering if the LoTW search software keeps
more recent info in a different type of memory, sort of a prefetch system.
Than it does for qso's/qsl's with more distant dates.

As my present call has more qso's, I don't think it's just the size of the search.

I was just wondering, that's all.

Love may be blind, but marriage is a real eye-opener.

Date: 2004-12-29 11:17:14 UTC
From: rlb
Topic: 1775 Message: 1775

I came across this today while reading a post on
QSLing on eham.net.

http://www.aa5au.com/lotw_beta.htm

While this has to do with the beta version. I was
wondering if some of the people on the list could take
a look at it and see what they thought of it and if it
was accurate and it was something that we might
recommend.

Quite interesting as it gives screen shots that might
make it easier to set up LOTW.

I'm confused, I have it perfectly correct in the log.
Also when I checked the LoTW file, it shows a LoTW qsl with WB6EUQ at the correct time date and band.

Try checking again...

Guys,

I called LOTW on Friday because a few of my contacts showed up as pending credits...when I had already received them as a LOTW confirmed.....

According to the LOTW desk, there is a problem with LOTW...apparently when the "other" stations resubmit a log, it'll show as a pending for you...

They said the LOTW links to the DXCC record daily and the "dupes" get overwritten with the correct info....so recheck your pending credits after a few days and you should see them "disappear"...

They said this "problem" will be corrected soon....

1788. Missing DXCC credit

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-01-13 13:17:07 UTC
From: Vladimir V. Sidorov
Topic: 1788 Message: 1788

Gents,
For some reason I don't see anymore a column showing new credits towards DXCC which normally come upon receipt of a new QSL giving a new band/mode. The new ones come and they are included and counted into the overall awards table, but are not seen in the "Your QSL" table.

Is anybody else faced the same problem? Or maybe I have checked some wrong box somehow/somewhere? Anyway, how can I turn it back?

Thanks and 73,

Vladimir EU1SA

Vladimir,

Try clicking on the "Awards" tab and on that page, link to your DXCC account by selecting the account and then clicking on "Select DXCC Award Account." Then, when you go to "Your QSO's" and select "Most Recent QSL's" you should see a column with the new ones that will apply to your DXCC indicated by a check mark.

I hope that answers your question.

I think what Vlad means is...that he saw an extra column in the Your QSO's screen that had a check mark in it.
I've seen it also.
I 'think' that column only appears for qso's that are available to submit for credit on that particular page.
If there are none, that column is not put into the screen.

It's linked to the qso's that are marked in the Selected column of the Awards screen.
Again I 'think' this is what happens
If two qsl for the same band/mode/etc are available to be submitted for credit that column in Your QSO'S appears allowing you to select which of the qsl's you want to be the one that's credited.

But then I have been having a bad month so far and probably have this totally wrong. :-(((

I have also seen that, and also "think" (because I have not seen any explanation of that, maybe just missed it somewhere) it offers to chose one of two or more options, but I meant that just the whole "DXCC" column completely disappeared in my case. Now it's back again, thatks to Clark!

Clark,
Thanks, it really works!!!
I used to miss the "DXCC" column for a few weeks when clicking on "Your QSLs" right after logging in. Now, following your advise I first entered the "Awards" subpage and selected my account. When I clicked on "Your QSLs" AFTER that, the "DXCC" column returned back!
It's quite weird, but anyway.
Now I really see everything I want to see, for example:

It's not actually necessary to go to the "Awards" tab. At the bottom of
the "Select QSOs to list" form, there is a drop-down for "Award
Account". Click on it and select the Award account you want to use in
the QSO diaplsy. For most of us, there will only be one, but if you've
got more than one DXCC account (perhaps from different countries), it
will show more than one. I presume that when the WAS award is tied in,
you'll have the choice of showing WAS or DXCC status, if you have both
accounts.

I've pretty much gotten to where I do this by reflex. Going to the
Awards tab and selecting your account merely causes the "Award Account"
to default to your DXCC account instead of '- None -' (until the current
session ends, or you change it). Just changing it on the "Your QSO's"
tab does the same, and requires less clicking.

For those who missed this announcement:

Jan 11, 2005: User Tip #1: Using LoTW to Validate Log Data -- After you place log data into LoTW, it is a good idea to make sure you have some data matches (QSLs). In most cases, if you submit a fairly large log (>100 QSOs) made since about 1995 forward, there will be matches.

If you have zero matches, then it is very likely that something is wrong with your log or your submission. Some of these problems could include (1) The times are wrong in your log; (2) You used the wrong certificate to sign the log data (assigning the wrong call to each of the QSOs you submit); (3) Your log data is very specialized and contains QSOs with stations that have not yet begun to use LoTW.

If you have no matches, it is also useful to look in your log for certain stations that have hundreds of thousands of QSOs in LoTW, such as K9NS, HC8N, 9V1YC, and KC1XX. If you have any of those stations in your log, and you don't have a match, it is likely that your log has a problem.

You can also use the Find Call button to check and see if any particular call has logs in the system. You won't be able to access any other user's QSO data, but you can at least tell if there has been some LoTW activity with that callsign.

A troubleshooting example that occurred recently was that of a station which submitted logs containing about 75,000 QSOs, yet there were only a hundred or so matches. Closer inspection revealed that the RTTY logs were OK (RTTY QSOs were matched) but the general logging program's log had the times off by a number of hours so there were very few matches for other modes (believe it or not the other matches likely occurred because the other station had likely used the same faulty software!). After the QSO times were fixed and the log resubmitted, the number of matches numbered in the thousands. In the event that you do submit a fixed-up log, your QSO totals on the user site will increase by that log amount. You cannot delete the first log, but it is harmless and will not be matched by others.

If you are really stumped over problems with log data, as always you can write us at lotw-help@.... The many logging programs also have excellent support and user groups.

Users report routinely achieving matches on QSO data from back in the mid-1970s, so apparently lots of people have computerized their log data. So, have fun with LoTW as it continues to grow.

In answer to the time match querry, see below.

What constitutes a QSO "match?"
To match, the two QSO records (yours and the other station's) must have:

a.. Call of each QSO matches own call of the other (including portable identifiers)
b.. The modes are in the same mode group (e.g., SSB and PHONE match because both are PHONE)
c.. The date/time values are the same within 30 minutes (all times are UTC)

I submitted the LoTW part of my Hybrid on Jan 3rd.
I also mailed the hardcard part on the 3rd.
It was received and 'logged in' on the 6th.

So has anyone submitted this year and has the submission been completed?

I think my family tree is a few branches short.

1800. Double QSO Credits

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-01-22 16:28:51 UTC
From: R Johnson
Topic: 1800 Message: 1800

Hi Guys:
Well it finally happened !!! Same QSO confirmed TWICE by LoTW!!!

A few days ago a U.S. ham re-uploaded his log bringing his QSO's
with me to the top of the list of "QSO's Received".

When I started checking the LoTW confirmed QSO's, I found 2 QSO's
on the same date and time, but differing by 34 seconds.

Back during the BETA testing I complained to the LoTW people about
the possibility of this occurring when LoTW allowed you to upload a
revised log without(LoTW) deleting the old QSO data from its database.

I have uploaded 5,409 VALID QSO's to LoTW.

LoTW reports that I have a total of 7,891 QSO records uploaded and have
567 QSL records matching.

The bad side is that LoTW has 2,482 bad QSO's from me in its' database.

The good side is that I have 10.4% conformation rate.

The bottom line question is:

If I have some "Double QSO Confirmations", how many of you ALSO have
"Double QSO Confirmations" from LoTW ???

I down load my LoTW "Detailed Report" twice a month, (1st and 15th) so
I can try to back track when this error occurred.

FYI:
I ceased to upload any my contest logs as of 7/30/03 with the exception
of my VHF/UHF logs (I'm still trying to promote LoTW to the Non-Users)
and my general (Daily Logs).

My Reason ??? LoTW has identified problems which haven't been addressed.
Why pass them onto the world.

Bob,

I thought the logic was similar to receiving 15 QSL cards from the same station, confirming the same QSO 15 times--what does it hurt? Due to difficult security issues, this was deemed better than allowing users to delete stuff from the log.

What's the harm in getting a QSO confirmed again?

What is the problem?
A dupe QSL does not change country, band, state, grid totals....
Annoying, mildly, life threatening, hardly......

How do you promote LoTW by boycotting it?

You have a nice confirmation rate.....Don't you think others would like
their rate to be as high?

Upload your QSO's and give another ham a chance.....

Jim

just a little comment.
There has been a move to log by seconds.
County chasers, Lighthouse are frequently multiple qso's.
Consequently to log a separate Lighthouse, multiple entries, a second or two apart result.

Is it possible that these multiple qso's could have been the result of one of these newer logging programs?

If it's not in the computer, it doesn't exist.

I've been fighting with you "LEAGUE PEOPLE" since the Beta Phase of LoTW !!!

This post has nothing to do with the LOGIC program at ALL!!

I'm using a second copy of LOGIC on my computer JUST to display the IMPORTED "lotwreport.adi" file results from LoTW that I download twice a month !!!

THIS SHOWS UP ALL THE BAD QSO records that LoTW has credited to my account. It also shows up all of the missing CQ Zones, ITU Zones, Grids, Counties that LoTW users have failed to include in their "Station Data Setup" !!!

With this kind of support, LoTW will be useless for anything except DXCC.

If you "LEAGUE PEOPLE" want LoTW JUST to be a DXCC utility, so be it !!! Most of us were expecting much more support from LoTW like WAS and VUCC for League Awards.

We were also hoping that LoTW might be used by other Awards from CQ, IOTA, etc. !!!

When a "QSO Record" is missing the required details, it renders the ENTIRE "LoTW Record" useless to most users !!!

The bottom line is, if LoTW tells me that I have 566 HITS, but Really I only have 565 what am I supposed to think ??? I don't know how many other QSO's are messed up in my account yet !!! Paper and Pencil time !!!

LoTW worried so much about "Security", I now think it dropped the ball on "Data Integrity" !!!!

Now that I can't rely on LoTW's calculations, I have to do my own on a scratch pad !!!! Just like I used to do before LoTW.

Last thing Ford:
With your "Snipping Out" of the main points of my post, you seemed to have missed the main subject of my post and you are trying to turn it into a "Logging Problem" !!!

It's a "LoTW Problem" !!!

You "LEAGUE PEOPLE" just don't get it at all !!!

BTW:
Seeing that you are a "League" rep., why don't you help the "0 Landers" get their "Station Data" correct ???
They are the represent the largest % of offenders of incomplete data !!!
(Caveat: In most cases) Hi Hi !!!

Hi Jim:
"Crap is Crap" !!! "LoTW is LoTW" !!!

Why upload more QSO's that are worthless to both me or others ???

If you are only a DXCC'er, well good luck to you, If you are
interested in anything else then send the CORRECT and COMPLETE
data to LoTW for your QSO's !!!

> "lotwreport.adi" file results from LoTW that I download twice a month !!!

I think I was addressing the issue of multiple QSO reports. I have no problem with LOGIC. I know a number of hams that use LOGIC to track their QSOs and they like it.

>
> THIS SHOWS UP ALL THE BAD QSO records that LoTW has credited to my account.
> It also shows up all of the missing CQ Zones, ITU Zones, Grids, Counties

I am sure there are a number of hams that are confused as to how the system works. All I can do is make an effort to ensure that the QSOs I upload are accurate. I've accounted for the several QTHs I've been in over the past 15 or 20 years. The county data and grid data is correct for the QSOs I've uploaded. If there are people using the system incorrectly, they should be encouraged to correct their certificate and upload the log again.

>
> With this kind of support, LoTW will be useless for anything except DXCC.

Unfortunately, you are correct in assuming that LOTW only supports DXCC at this time. I am hopeful that the people developing the system will incorporate the other aspects of paper collecting as well--counties, VUCC, WAS, etc. Until there is support for these other awards, people sharing their precious logs will find little use in accurate certificates besides DXCC support.

>
> If you "LEAGUE PEOPLE" want LoTW JUST to be a DXCC utility, so be it !!!

Hmmm. You "league people?" I don't call you names. Why would you be angry with me? I too am anticipating an expansion of the awards process. But the changes demand additional development $$$,$$$. Somebody has to come up with the $$$ to make it happen. And $$$ doesn't grow on trees.

>

Welcome to the real world of data integrity.

>
> LoTW worried so much about "Security", I now think it dropped the ball on
> "Data Integrity" !!!!

I think you are blaming these problems on LOTW when in reality the problem is with individual users. Training, support, and effort on the part of all users is needed for the data to be accurate. Expecting the ARRL to track down every user to see if they really did live in or traveled to, for example, McIntosh County ND is beyond unrealistic. The users need to ensure that their certificate is accurate.

>
> Now that I can't rely on LoTW's calculations, I have to do my own on a

>
> It's a "LoTW Problem" !!!

I think it is a reality problem Bob. Welcome to the real world of dealing with the public. Garbage in, garbage out. It's as simple as that. All the "support" you seem to think the ARRL is capable of providing can not resolve the problems with hams failing to take the time to report their location when they upload their logs.

>
> You "LEAGUE PEOPLE" just don't get it at all !!!

League people? I am just a guy that enjoys ham radio with gusto. I have never received one dime from the ARRL. Never. Quite the contrary, the money tends to flow the other way.

>
> BTW:

"League" rep? Perhaps you can explain what you mean. I have no clue how I managed to strike such a sensitive nerve with you. I think I was attempting to explain a LOTW 'feature', not a bug... You, on the other hand, seem hell bent on laying blame on the ARRL for issues well beyond their control.

>
> 73
> Bob, K1VU

Have a great day Bob. Enjoy your radios and your computers. Enjoy those folks you interact with on your radio. Be an elmer to those that are ignorant of the subtle nuances of LOTW. This is a hobby. I think the whole world will be a better place if you put this in perspective a bit.

END OF THREAD!

1812. W9OL LoTW results

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-01-23 13:50:23 UTC
From: FireBrick
Topic: 1812 Message: 1812

this report is generated by DXBase2005
https://home.comcast.net/~w9ol/reports/lotwprev12mnthsonly.txt

I too wish that LoTW was available for the other ARRL awards.
I too wish that LoTW was connected to IOTA Awards.
I too wish that LoTW was connected to Lighthouses, Castles, and McDonalds I stopped at while traveling Awards.

But it isn't.....as yet. Maybe it won't be before I go to that great Hamvention in the sky.

I too wish that LoTW had more data checking. Like for those people in Missouri and Alaska who incorrectly spell the name of the county they live in.
(I won't mention the counties to protect the spelling bee challenged.)
(Fortunately I live in Cook, and USUALLY get it right.)

Now my data in the above mentioned report is slightly skewed.
Seems that some just re-submit their entire log every few weeks instead of just submitting qso's since last submission.
(Which is sort of like receiving the 3rd qsl for that contest back in 1993 via the ARRL Bureau).
It's not a big deal, doesn't cause me any pain.
I don't go into a rant against 'LEAGUE PEOPLE' because of it.
Even though I think the LoTW software could recognize it as a dupe and not 'process' it.

Software I use also has a 'person said he was in CQ Zone xx and ITU Zone yy but he may have goofed' feature.

So should I dump LoTW because someone incorrectly entered the Zone they live in.
Seems like overkill to me.

I too wish LoTW was farther along, but at this point I'm not going to sweat the 'little' things.

That being said. NO ONE IS MORE ORNERY AND CANTAKEROUS than I.
When I retired, my crew gave me an award for being the 'First Surviving Heart Donor'.

Work smarder and not harder and be careful of yor speling.

Bill H. in Chicagoland

1816. Given up again

Well, good luck to you all using LOTW. LOTW leaves mes LOFL, as I cannot get the thing to work.

ARRL has been unresponsive in their support, and I have more darn "certificate requests" submitted that its all botched up.

ARRL - you need to make usable software if you want people to use it. Take a lesson from the Usability Professionals Association (www.upassoc.org) and clean up the software.

I am an IT professional and technical writer by the way, so I'm no babe in the woods when it comes to software usage and installation. This thing is just plain bad.

73s and good luck

Hi Bob:
Well, I see that LoTW has successfully created one more dissatisfied
potential user !!!

LoTW can be made to work in spite of the poor documentation.
Their are many people on this list who can give you a hand.
Just let us know where things go wrong for you in the setup.

That being said, are you really sure you want to use LoTW just yet ?
You might be better off to do as I advise the members of my clubs.

"Just sit back and WAIT for LoTW to fix the current problems first".

Currently I'm running about a 30% to 40% rate of "Bad or Incomplete"
data coming back from LoTW, which doesn't give me much confidence in
the long usefulness of LoTW.

Many of us have ceased uploading our "Contest Files" and are waiting
to see if LoTW is going to be useful for anything other than DXCC !!!

A lot of the guys in the clubs are working on their WAC, WAS, 5 Band WAS
and a few on VUCC. None of these Awards are supported by LoTW yet.

I am also an IT person (Network Specialist) for the local hospital. Initially, I had a problem with LoTW. Then I sat back, looked at the situation, and decided that I was assuming too much. LoTW was designed for the non-computer user. We have many of them at the hospital. When I decided to "forget" about computers and what makes them, and software, work. Everything worked fine for me! Just remember the KISS theory. That's, evidently, what the ARRL has patterned it after.

Good luck & 73,
de WN0L

The station data returned with a LotW confirmation are only as good
as that entered by the station on the other end ... just like the
data on a "real" QSL card. How may cards have you received that are
not usable for a particular award (e.g., IOTA because it does not
contain the name and number or the island)?

Have you bothered to contact the other station and asked them to
correct/update the station information they have entered into the
tQSL set-up (station location) and re-upload their log? I'll be
you would send another card & letter to a DX station asking for a
corrected card if you needed it!

ARRL have already announced that WAS will be next to be supported.
I understand that work is in progress but has to take a back seat to
other (current) IT support duties.

With the basic database and QSO matching already in place and proved,
adding additional outputs should be relatively straight forward.

73,

Very good point John.
Advising members to not even try is counterproductive.
We need more people to take part, that's how the system improves.

I have a macro in my rtty/psk buffers inviting people to view the LoTW webpage.

Saying to wait on LoTW till all the issues are changed is like saying:
"I'll send qsl's when I finally get a design I like".

In the meantime, however, somebody else might be happy to get an LOTW confirmation from one of your "sitting" club members - who would be able to upload a correct log if properly advised (and not advised to do nothing).

Hi Bob:
Well, I see that LoTW has successfully created one more dissatisfied
potential user !!!

LoTW can be made to work in spite of the poor documentation.
Their are many people on this list who can give you a hand.
Just let us know where things go wrong for you in the setup.

That being said, are you really sure you want to use LoTW just yet ?
You might be better off to do as I advise the members of my clubs.

"Just sit back and WAIT for LoTW to fix the current problems first".

Currently I'm running about a 30% to 40% rate of "Bad or Incomplete"
data coming back from LoTW, which doesn't give me much confidence in
the long usefulness of LoTW.

Many of us have ceased uploading our "Contest Files" and are waiting
to see if LoTW is going to be useful for anything other than DXCC !!!

A lot of the guys in the clubs are working on their WAC, WAS, 5 Band WAS
and a few on VUCC. None of these Awards are supported by LoTW yet.

Finally ... a computer guy who gets it! Seems many folks are "over thinking" LoTW, and in the process, making it much more difficult than it really is. Use common sense ... not your IT knowledge.

Print out the instruction page ... read it over a time or two, then when it's time for the real thing, slowly and carefully, follow along step by step. It's not THAT difficult.

Bob,

Don't give up. It took me a couple tries and
applications too but now it works. I had good luck in
talking to someone helping me through it. Had
something to do with removing all references to the
tq5 before reinstalling I think.

A few years ago I attended a lecture on education and
in it they were talking about programing the VCR.
According to studies the most successful in that
programing were in two different educational groups.
One being children that had not gone through the 8th
grade and the second being high school dropouts. It
seems as we become more classroom and school educated
we seem to be less inclined to think "out of the box"
and have to march to the beat of the drum. I don't
know if I subscribe to that theory or not but I do
know that my 10 year old grandson sure runs rings
around me we it came to programing the satellite
system setup.

Good Luck and Hang in there.

hmmmm
my ssb returns are quite low, like 2%
my cw returns are about 10%
but my rtty/psk returns are running almost 30%

maybe telling people not to join contributes to low returns?????

It's understandable why the rtty/psk are so high as most are using computers for the mode.
It's understandable why the ssb returns are so low.....
(I won't say anything, you can make up your own reasons)
Oh heck...I'll say it anyway!

Joe... You and other smart guys like Bill (Firebrick) offer help. Much appreciated. But if I can't
make LOTW work by myself it's too complex and I want it fixed, not tolerated. I don't want the
problems covered up, I want them eliminated. I think I have lots of company.

There's absolutely no good reason for the kind of security system (certs, renewal every year, cards
in the mail, etc) that LOTW insists on using and that makes LOTW so bloody difficult to work with.
Banks don't do that. Credit cards don't do that. It's completely unnecessary. And I'm not the only
one saying so, but who's listening?

And if you do manage somehow to get it to work, there's no good reason why a LOTW QSO confirmation
shouldn't be acceptable for any ARRL award. As for the fees, ARRL could double or triple them and it
would still be a bargain over direct QSLing.... but it isn't worth one penny if you can't get it to
work smoothly and easily.

I do support the LOTW idea. Really, I absolutely love the concept, but in the execution it's screwed
up (especially with the method of security) and I can't be bothered with it anymore. I'm with Bob
and many others.... I won't be using LOTW until they fix it. When they do, I'll be back in a flash.

Now, instead of trying to convince us how great LOTW is, or offering to help us poor idiots to
muddle through, maybe some smart, helpful guys (like you Joe) could try convincing ARRL to fix
LOTW. It's not just broke, it was never right.

End of rant. Flamesuit ON....8^)

73, Jerry K3BZ

PS... I wonder why the ARRL LOTW Manager doesn't have an e-mail address in the QST "Guide to Member
Services" (pgs 14 & 15, Jan QST)?? You can e-mail hq@... and hope someone forwards it, I guess,
but why doesn't the LOTW Manager want any mail?

I guess a lot of others feel the same way.

Look at the numbers ...

62,278,796 QSO records have been entered into the system.
2,540,288 QSL records have resulted.
8,820 Users are registered in the system
13,038 Certificates are active
94,933 User files have been processed

Get more people to upload their logs, instead of waiting for "better days" or the ARRL to fix whatever it is folks are waiting to be fixed ... and guess what? The QSL percentage will go up, and we'll have one less thing to complain about.

(2 more logs have been uploaded since I started this e-mail ... 796 additional QSO's, 288 additional QSL's!)

You can't tolerate and use and praise LOTW in spite of its flaws and still expect the flaws to be
fixed.

When something is as flawed as LOTW, not using it... and convincing others not to use it... is one
way of drawing attention to the flaws.

Praising LOTW in spite of the flaws just helps to prolong the current situation.

Loud complaints, protests, and boycotting by enough people might eventually help to motivate
meaningful change. I didn't invent this idea... it's basic to the American culture.

Sending copies of this kind of reflector comment to ARRL might also help bring attention to the
problems. Does the ARRL LOTW Manager read this reflector?

I strongly support the LOTW concept, but I don't believe that ignoring the problems will ever
improve it, so I won't use it until it's fixed.

It's not just broken, it was never right.

I was going to respond to this thread by saying "If you can't figure out LoTW, go down to the FCC and turn in your license because you are really too stupid to be a ham"

But that isn't nice and would really cause some hard feelings.......

Let me rephrase it......

LoTW is a little cranky. It actually requires that you read a paragraph or two of instructions and maybe an e-mail to the ARRL to get it going. (they are very helpful)
I'm not happy with the progress. The DXCC interface is really slick, but what about other awards?????
I've spoken to my Division Reps. about and even to Jim Haynie. The ARRL has priorities that don't include LoTW. I understand, but I'm not happy about it.

Pissing and moaning is not constructive.......send some MEANINGFUL criticisms to the ARRL and let them put them on the "to do" list.

Boycotting the system is self destructive. Upload your logs and SUPPORT the ARRL's effort.

Don't be a schmuck, be helpful.....this is OUR LoTW, make it work.......

Jim

Of course people should TRY Log of the World. If they don't TRY it, they won't see any of the flaws.

They might get lucky and have it work for them. Many do. But many do NOT. Too many.

Those that have problems with LOTW won't be helping to get those problems addressed if they ignore
them. They should tell someone, hopefully the LOTW Manager at ARRL hq@...

That's all I'm saying.

1840. Is it worth the effort?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-01-30 03:11:51 UTC
From: k6kyj
Topic: 1840 Message: 1840

I will be candid: after 50 years in amateur radio, I no longer bother with QSL cards, either incoming or outgoing. Nor do I pursue DXCC awards.

However, I do have over 6,000 DX QSO's in various log formats, mostly TR or Excel spreadsheet. I would like to upload these to LOTW to help others that might need my QSL for an award.

Already I have had more than one nightmare dealing with LOTW. My current callsign was active by me during two different time periods from two different QTH's. It took several emails to ARRL to get this resolved.

Now, I am conisdering the time-consuming effort of consolidating my logs into one huge acceptable format log.

Following the posts of this group for the past month, I get the feeling LOTW is not exacting sliced bread.

My question: am I getting myself into more grief than I want?

Please reply directly as it seems this group does not need any more fuel for flames.

Let's see... according to Jim... anyone who's having trouble with LOTW is "too stupid to be a ham".
Of course, since Jim ISN'T having trouble, that makes him so much more worthy. Nice, Jim.

Hmmm...lodging a complaint = "pissing and moaning".
However, Jim does agree that LOTW is "a little cranky" and that "the ARRL has other priorities".
Jim is "not happy about it"... but lodging a complaint is "not constructive". Why the heck not??

'Scuse me, Jim... but the point of lodging a complaint with ARRL is to motivate them to CHANGE their
priorities.
Maybe give a LITTLE more priority to making LOTW more "user-friendly".

If you just put up with something, it will never change. If you don't complain, ARRL is justified in
believing it's good enough the way it is, and doesn't deserve any greater priority.

Look, if you're happy enough with it to put up with it, fine.... use it. But....if you're NOT happy
with LOTW, complain and don't use it until it's fixed. That's what will be "helpful".

Of course, if you are worried about being a "schmuck", you could take Jim's approach. Go along.
Tolerate unnecessary complexity and over-the-top "security" that makes things difficult. That way,
Jim won't call you names.

OK, that's about enough from me on this subject. It's turning nasty and we don't need that. Anyone
who's been paying attention knows what the issues are and can choose what makes sense to him or her.

Thanks for giving my point of view more than its fair share of attention.

73, Jerry K3BZ

Jerry, you're completely off base on this one. In fact you're behaving just like my wife who refuses to LEARN how to use any device that doesn't work the way she expects it to. You may not like the security/authentication protocols but that decision was made "above our pay grade."

The ARRL Membership Services Committee, Awards Committee, and Board of Directors determined that the program required that level of authentication/security to maintain its integrity and we need to accept that decision if we want to take advantage of electronic QSLs for DXCC and (soon) other ARRL awards programs.

The system is still evolving ... however, I expect you will soon see transparent support for LotW in DXKeeper.

> So... as Rod suggests..."relax, have another glass of
> wine".... and then e-mail hq@... and COMPLAIN about
> LOTW. Demand that it be fixed, not tolerated.
> Refuse to use it until it's fixed.

There is already to much whine going on ... if you really want to improve things call your ARRL Director and demand that more IT resources be provided so that implementation of WAS/VUCC/etc. can happen more quickly. Demand more IT resources be provided to properly documenting the interface so the developers of amateur software can more easily add LotW support to their products. Demand that more IT resources be provided to upgrade (and update) the DXCC desk programs so that they are completely linked to LotW (instead of requiring that LotW records be printed from one system and SCANNED INTO another system.

If you want to whine ... make it a productive whine.

> It's not just broken, it was never right.

It's not broken ... it just doesn't work the way you think
it should work (go use eQSL - a totally insecure system).

What are all these 'flaws' you are talking about? Can you be specific? I set up my LOTW account the first time through. And I'm hardly a techno-weinie IT guy. I think this corresponds to the experience of a great many users of LOTW. You get a certificate for every location and callsign you have held that you intend to upload, upload the log, and wait for the others to do the same. If there is a specific glitch that is causing all the heart-burn, maybe somebody here can help.

>
> Those that have problems with LOTW won't be helping to get those problems addressed if they ignore

>
> 73, Jerry K3BZ

I don't think anybody is ignoring anything or anybody. You have mentioned that "it was never right." I think the ARRL has stated many times that LOTW is a work-in-progress, as time and $$$$ permits. Asking people who can work through the apparent 'glitches' to abandon LOTW is not exactly progress.

I hear chatter on this reflector about bad data coming through. DUH! Garbage in-garbage out. Paper QSLs are no better. I have hard paper QSLs from the DX's home country when in fact they were working in a different country or a special IOTA within that country, but the QSL does not reflect that. If the DX uploads to the correct certificate, life will be good. If not, more garbage in the log. Come on guys, we've all got problems with our real logs and we know it. The ARRL can't fix all of them. But the certificate process can fix some of them if the people will choose to use it correctly.

If there are big problems that seem insurmountable, you know what? Pick up the dang twisted pair and call the ARRL directly. Some have tried this and don't get very far. I suspect those that have problems getting support from the ARRL no-doubt start the conversation like this... "You lazy no-good overpaid bums at the ARRL need to be fired! I can't get the blah blah blah to work right! That's why I cancelled my membership back in 1962! And I've encouraged every ham I meet to do the same! Now, how the heck do I get service around here?" Anybody calling me with that line of reasoning would get a quick dial tone. No, I

take that back. They would get the standard "have a nice day," and then the dial tone.

A courteous voice will usually generate a sympathetic ear on the other end of the line. Ditto for the email inquiry approach. Squeeky wheels may get grease--eventually. But a calm, reasoned, and professional approach to problems will get fixed in due course.

For What It Is Worth

I have submitted 5934 qso's to both eQSL and LOTW

eQSL LOTW
5934 QSOs submitted 5934 QSOs submitted
841 QSOs confirmed 877 QSOs confirmed
52 Countries confirmed 58 countries confirmed

I use Scott's (www.n3fjp.com) software. It has the upload to both sites built right in. Within 5 minutes after a contest, I have my log submitted to the contest site, eQSL, and LOTW. As you can see, my country conformation on LOTW is actually 6 countries ahead of eQSL... I have 114 countries confirmed via actual qsl card. So they are both running at about 50% of actual. I have no complaints.

Yes, "Garbage In, Garbage Out" !!! This points out the need for
better setup instruction for TQSL. It might be worth it to
program TQSL force the user to enter ALL of his "Station Data"
before he could "Sign" any logs for uploading.
As you know, it only has to be done ONCE. Then all uploads will
be correct and complete.

>
>
>Have you bothered to contact the other station and asked them to

Yes, I have. Most didn't know there was a place to enter their
"Station Data" or the necessity of filling in all the blanks.
Some made the corrections, some ignored the problem, and some
still don't understand it.

>

> complete.

I'm fairly confident from looking at the tQSL application that it
was never designed to be anything more than a basic stand-alone
interface to allow log "preparation" ... a fallback application
for those whose logging program did not support LotW.

A few programs have managed to incorporate direct LotW signing
and uploading (WriteLog, etc.). However, the biggest impediment
is the lack of a clean, properly documented, set of procedures
(library) for programmers to incorporate into their work. As I
understand it, the material currently available has no separate
documentation (calls & parameters) ... the package has not been
"cleaned up" to remove depreciated routines and code - and the
only documentation is in the form of comments embedded in the
code itself.

Most logging programs contain the information necessary to
properly create a "station location" ... if the upload prep
were handled by the station log, the data would most likely
be "clean."

> >ARRL have already announced that WAS will be next to be
> >supported. I understand that work is in progress but has
> >to take a back seat to other (current) IT support duties.
>
> Yes, I've heard that. Still waiting to see a LoTW say When !!

I'm hearing "soon" - but that's a relative term <G>.

> >With the basic database and QSO matching already in place
> >and proved, adding additional outputs should be relatively
> >straight forward.
>
> The database has a lot of bad data in it. Things will only get
> worse when the other awards are added. Clean up time is now !!!

The only way to get the bad data cleaned up is for users to
complain to those who have uploaded the bad data and get
them to fix their records.

It might be "nice" if tQSL were "tightened up" to do better error checking but that would probably take resources away from more important things (like implementing WAS, VUCC, etc.).

There are those who argue that their banking and/or brokerage software is not as complex as LotW. However, what they're really saying is that the banking/brokerage software does a better job of "hiding" the complexity from them. The account relationship is set-up off-line (which makes authenticating the individual much easier), the application program handles signing of the data when you enter it, etc.

If an amateur could "sign up" for LotW at a hamfest or a local ARRL office and every logging program could create/upload signed records, LotW would be as easy as UserID and password. If one understands how to use tQSL and creates the certificate, LotW is that easy now(!).

I have had as many problems getting started as anyone - the buggy 1.09 tQSL caused me to lose my first certificate and I was one of the very first to have a "call01" userID. I lost private keys when I moved tQSL to another machine (but I was able to figure out how to recover the keys from the old machine) and I had trouble getting certificates for all of my old calls/station locations for all my various QTHs. Still, every one of those problems was solvable by taking a deep breath and attacking the problem one step at a time.

Could it be better? Sure! However, all the yelling that the system is too complicated ... doesn't work like my bank ... doesn't support my award ... etc. doesn't get the job done. I wish I were a C programmer ... I would have cleaned up the client libraries and written documentation a long time ago but I can't do that. The best I can do is help other users learn to use the system as it is ... and encourage those who don't use it to start doing so (I even put the message "Please QSL via ARRL Logbook of the World" on every QSO I upload to eQSL.cc!).

Make your concerns known ... but don't tell potential users that "LotW is too difficult, just wait." Encourage your Director to see that more resources available to the LotW projects and encourage those volunteers with ability to come forward and help. Encourage those developers who have implemented full LotW interfaces to share the knowledge so other developers can do so as well. Encourage sponsors of non-ARRL awards to recognize LotW confirmations and make the necessary arrangements to provide credit based on those confirmations (the database already has enough data to support the WAZ, WPX and IOTA programs).

There is a lot that can be done in a positive way but encouraging people not to sign up, and not to upload logs

is counterproductive.

73,

From: Dave Bernstein
Topic: 1816 Message: 1853

Some comments:

1. Compared to moving around paper QSL cards, LotW is a huge step forward: its faster, cheaper, more accurate, more reliable, and no less secure.

2. One of the interesting properties of software is that even the most poorly-written application will be loved by some fraction of the audience. Good software is characterized by the noticeable absence of users who dislike it, not by the presence of those who defend it.

3. The best way to improve an application is by listening to critique from its users. Loyal supporters may be good for the developers' egos, but critical users are the most helpful when it comes to identifying and correcting problems. If you wish to help move an application forward, driving off critics is the last thing you would do.

4. The current implementation of LotW has many deficiencies -- not because its developers were incompetent or unmotivated, but because they are severely understaffed and appropriately chose to put something into users' hands sooner rather than later. The slow rate of subsequent improvement is dissapointing, but this is another symptom of insufficient development resources.

So if you truly believe in electronic QSLing, then when a frustrated or unhappy LotW user shows up here, draw them out, don't chase them away. Suggesting to ARRL Management that LotW needs more development resources would also be constructive.

73,

Dave, AA6YQ

My offer to help as best I can still stands.

I made a few goofs with the logs of stations I manage.
But they were fixable.
I admit I asked for help as I'm not the brightest bulb in the pantry.

It may not be perfect, but it's sure better than what we had.
Feel free to call me.

And to the others, no need to get 'hyper-ventical'.
Nothing is so broken it can't be fixed if we work together.

Virginity can be cured.

Bill H. in Chicagoland

Is there anyway to have this guy removed from the reflector???????

-------Original Message-------
: Re: [ARRL-LOTW] Given up again

I don't pay much attention to guys as obviously ignorant and unmannered as Jim.

I knew my message woulkd be unpopular among those who have LOTW figured out, because for them LOTW
is an asset and they don't want any shit disturbers like me messing with their assets. But truth is
an absolute defense, and the truth is that all I suggested was that people not participate in a
system they have problems with, and that they make their feelings known to those at ARRL that have
the power to make changes.

I encourage you to do just what you described.... make a list of the problems YOU find with LOTW,
and send it to ARRL. If you like anything about LOTW, you might want to mention that as well....
fair is fair.

Thanks for standing up and being counted!!

Rod implies that if you are having problems with LOTW, there's nothing wrong with LOTW, it's YOU.

It's ME.

You and I are just not smart enough, or patient enough... we haven't given LOTW an "HONEST TRY".

Nonsense. Don't believe it. It's not US. The problem is with LOTW.

LOTW is seriously flawed, and one way to get it fixed is to refuse to use it until the ARRL LOTW

Manager addresses the problems and takes steps to fix them.

So... as Rod suggests..."relax, have another glass of wine".... and then e-mail hq@... and

COMPLAIN about LOTW. Demand that it be fixed, not tolerated. Refuse to use it until it's fixed.

It's not just broken, it was never right.

Hamish....Posting MY list of problems to this group would only make sense if I wanted help with
navigating the LOTW maze. I no longer believe that help from this group is doing anything to solve
LOTW's underlying problems... and accepting help may even be counter-productive.

I am very appreciative of those offers of help, but as long as those who have made it thru the LOTW
maze continue to lead others by the hand, the underlying LOTW problems will be covered up, masked,
LESS visible. To get them fixed, we must first acknowledge they exist... and then we have to make
them MORE visible to ARRL.

It's like taking pain pills. The pain is there to indicate an underlying problem. If we mask the
pain with pills, it goes away and we feel OK. But unless we fix the underlying problems, they will
probably get worse. Problems with software won't go away simply because we help each other navigate
through the maze. We have to treat the underlying problem, not just the symptoms.

The ARRL is not paying enough attention to fixing the underlying cause(s). I'm not smart enough to
do much more than recognize a serious problem exists. I don't know how to fix the problem. I'm not
even capable of coming to a proper "diagnosis" of the problem. But I can see clearly that a serious
problem exists, and I can push for something to be done about it. I suspect that system security is
part of the problem. But whatever, the problem exists, and it has existed for a few years now.

And so far what I see happening is
(a) a little progress by ARRL. Far too little, far too slow.
(b) a growing number of those who wish to use LOTW, but are frustrated by the software
(c) a group of smart guys who have managed to overcome the LOTW obstacles and are helping others do
so, but who are helping to mask those obstacles so they are not being removed.
(d) a few guys who think that cheerleading for the team is a positive way to make the problem go
away... but whose efforts are also masking the underlying problem
(e) a few guys who are bringing a message... to use methods that will motivate ARRL to fix the
underlying problem sooner rather than later
(f) a few guys who think that killing the messengers will make the underlying problem go

away.

I strongly support the LOTW concept. I think electronic QSLing is a great idea. If I didn't, I
wouldn't be sticking my neck out to push for a better system.... perhaps one that succeeds in
"hiding the complexity from the user" as one fellow put it very neatly.

For any electronic QSL system to be successful, it absolutely must be operated by the ARRL. However,
while the ARRL may be the world's largest and best ham radio organization, ARRL is also capable of
developing a buggy, frustrating software system that is too difficult for many potential users and
drives them away.

So what to do? Keep quiet about it to demonstrate "loyalty"?? Be stoic and muddle on through with
help?? Be courageous and chase off the critics??

A system like e-QSL is not necessarily the answer... too many smart people say it isn't secure
enough. But maybe the e-QSL system has something to teach the ARRL, because a lot of happy e-QSL
users say it's easy to operate and they just wish it counted for DXCC, etc. Perhaps the answers lie
somewhere in between.

I said in an earlier post that I've made my point and am done with this topic, but I guess I'm not.
Hamish asked why I'm not listing my problems with LOTW here. I'll continue to direct my problem with
LOTW to ARRL, where it might do some good. And I guess I will get drawn out here by well-intended
questioners like Hamish. I truly do appreciate the offers of help, but me accepting help would
simply make the problem a tiny bit bigger or last a tiny bit longer. I'd rather keep stumping for
that much needed attention to the underlying problems.

I am normally in the lurk mode here and seldom read the posts but this one caught my eye. 1) Why subscribe to the group if you don't want their help? 2) Many times I have found (I'm talking about life in general) that I can't see the forest from the trees and a simple nudge in the right direction sets me on the correct path. I am far from one of the "SMART" people on this reflector but have managed to get LOTW working including 3 callsign changes. I am not trying to say you are smarter of dumber than anyone else on the reflector just trying to point out that you might be able to get it working with the help of the group and still continue to confront the ARRL with the problems that do exist.

And posting your list of problems to this group won't fix 'em.

Why not start your own "LoTWBashers" reflector? Then all the folks who have problems, can compile your list(s) ... come up with solutions, and present them to the ARRL in a reasonable and sensible way ... instead of trashing it here.

Please give those of us who got it working, are using it, have no complaints, and those who want to try it ... a break!!

Ron

30 Certificates + 124,372 QSO's uploaded = where's the problem?

Dennis... good point. Glad you asked. Actually, after much frustration, I am in LOTW. I've uploaded
my logs. I've got some matches. But that fact doesn't change a thing I've said. It has been entirely too difficult and remains so. But it's a great idea and I support the concept strongly.

Like you, I'm mostly a "lurker", but I'm now convinced that LOTW has serious problems that need
fixing. Too many potential users, here and abroad, are frustrated. ARRL needs a push. I'm only one
voice. Like-minded others are needed to also take a stand with ARRL and take other action they think
might get LOTW fixed. For example, I won't use LOTW anymore until it's fixed, and I'm suggesting to
others that boycotting LOTW and complaining to ARRL are good ways to get ARRL's attention. I'm just
being a squeaky wheel. Many here on the reflector disagree with me, but at least there's a lively
discussion going. The trick is to remain civil and open-minded.

I stay on the reflector because there's a lot of LOTW users here...along with many frustrated guys
who want to use it. Plus, I enjoy hearing opposition... I learn from others who disagree with me.
And I honestly think I'm doing what I can do to make a long-term positive difference to get the very
best LOTW possible.

As I said, the trick is top remain civil and open-minded. And not to be intimidated.

Not a problem. This just isn't the forum to get things done.

Like I already mentioned ... join the "squeaky wheel" list at
http://groups-beta.google.com/group/LoTWSolutions
Discuss the problems of LoTW and come up with solutions there.

Leave this list for those who are using it, want to use it, or have
questions using it.

Ron

Congratulations, Mike! I'm far from 10% but since 80% of my entries are pre-1985 contest logs, I'm dealing with a lot of "lost logs," paper logs that people don't want to take the time to enter, electronic logs in the "wrong format" and all LotW bashers who tell their friends not to bother with LotW.

Still, when comparing apples to apples with eQSL (only "AG" eQSL confirmations), LotW confirmations are running 30% ahead of eQSL! Not that even AG eQSL confirmations are good for any award with integrity.

OK, Ron... you have a point. The sted purpose of this reflector, in part... "This discussion group
provides a forum for LoTW users to get technical help and as a collection point for tools and
information."

I've been providing information and tools I think will help get serious LOTW problems fixed. I
remain ready to do so, with the positive goal of making LOTW better. You apparently don't like my
methods: protest to ARRL and boycott until they take notice.

I tried to close this thread down once, but it wouldn't die. I'll try again.

73, Jerry K3BZ

That's not true ... unless those who are successful (a vast majority of users) are willing to take the time to coach those having problems, LotW will never have sufficient participation to become a truly useful tool. What you see as "problems" are evidence of the security necessary to maintain the integrity of the awards program in an on-line environment.

> It's like taking pain pills. The pain is there to indicate
> an underlying problem. If we mask the pain with pills, it

> problem, not just the symptoms.

Nearly every physician will tell you that patients in pain need palliative or analgesic treatment in addition to the treatment for the underlying cause. It has been shown time and time again that those who receive treatment for pain in addition to treatment for the underlying cause recover more rapidly than those who do not. In some conditions, there is no curative treatment for the underlying cause (it may be chronic or structural) and in that case, palliative treatment is even more important. In still other cases, the underlying "disease" may be nothing more than another symptom of stress-induced (or psychosomatic) pain.

> The ARRL is not paying enough attention to fixing the
> underlying cause(s). I'm not smart enough to do much more
> than recognize a serious problem exists. I don't know how

> that a serious problem exists, and I can push for something
> to be done about it.

The solution is not to disparage the system, to tear it down, to run away, or encourage others to not even try. The solution is to advocate (even demand) that your ARRL Director support the additional resources needed to get the job done right.

The "warts" you (and others) see are due to the security structure. They could be completely hidden with a very few steps:

A) Client software has been very slow in appearing because the client side interface is not well documented. Last I heard, the routines exist only in a variant of C, they contain much old (dead) code and superseded routines. The only documentation for developers are terse comments buried in the code.

The original assumption was that much of the development would be done by volunteers ... and it was. However, there has obviously not been enough volunteer development and the ARRL BOARD needs to provide resources - either staff or outside professionals - to move the project forward. With a properly documented library of code, third party developers would very quickly provide transparent LotW functionality in their products.

B) On-line sign-up is difficult for many users. There should be an alternative way for prospective users to sign-up (have their documents examined) at many of the larger (regional) hamfests in both North America and the rest of the world - perhaps something along the lines of field checking cards. The larger IARU member societies (RSGB, DARC, REF, JARL, WIA, LABRE, SARL, SRR, etc.) should be enlisted to perform "by mail" verification on a regional basis.

C) LotW should be promoted vigorously in the larger non-English amateur publications (German, French, Spanish and Japanese at a minimum) as well as every national society publication. Documentation should be written in or translated to eight to ten major languages.

D) Logs submitted to the ARRL "contest robots" should be signed with a master certificate and made available for LotW. The contest logs are already subject to validation and error checking ... the file format includes all the data necessary to create an LotW "station location."

Sponsors of other major contests (CQ, BARTG, RSGB, etc.) should also be encouraged to make the electronic logs submitted in their contests available for LotW.

E) Perhaps the system should be expanded to allow users to attach a donation ... perhaps $0.10 to $0.25 per card or DX station ... for DXpeditions and/or users in the poorest

countries. Such a system might help increase participation by the large DXpeditions and "rare" DX.

There is no reason that the ARRL BOARD should not appoint an ad hoc committee on LotW. The issues are very clear and the solutions almost as clear. LotW should have an evangelist with the authority to seek volunteers (donated services), "tap" staff resources or contract with outside persons to move things forward. For example, cleaning up and documenting the client side libraries should not take a competent programmer/technical writer more than a month to six weeks. Similarly, competent promotions persons should be able to design an ongoing campaign (international) and prepare the basic print material in a very few weeks.

The BOARD squanders more resources than this would require on projects like the ad hoc digital committee and an ongoing restructuring program that would accomplish nothing except open our HF bands to wideband digital modes ... a move that benefits only certain European equipment manufactures and their quasi-commercial clients.

It's time the ARRL BOARD stropped treating LotW like the bastard step-child of a prodigal son and provides the resources to move into the 21st century. The volunteer development efforts and user base to date have proven the program works ... it's time to move it into the mainstream.

I put the 9 logs of stations I manage onto LoTW.
Mostly from the 80's & early 90's.

I always wonder what the person says when he see's one of these oldies come up in his results.
Today, G4OBK got a 9X5AA LoTW qsl dating in 1988.

Hope it brought a smile to his face.

Sure wish there was a way to use a 'scanner' for people to put those old logs online.
But judging from the handwriting deciphering I had to do..not likely to work very well :-(((

Next time I volunteer to key in some logs....I'm insisting they be written by a Catholic School Nun taught penmanship student! :-)

My personal oldest LoTW qsl is from 1971....anyone beat that?

Yes, you are correct. eQSL is not recognized for DXCC
or any other ARRL awards program. The "confirmations"
are not traceable or secure.

That is correct. Recently someone sent me an e-mail saying that I had
received an e-QSL confirmation from them. I went to the e-QSL page and it
said all I had to do was register to get that
e-QSL and 83 others. I deleted the message and moved on. What would I do
with them after I got them? With that and 50 cents you can buy a coke.

Fine. But how I can tell if they exist if you don't say what those
problems are? I can't disagree or agree in the current state.

LoTW works fine for me. I have a single call and a single certificate.
I've uploaded a couple of thousand QSOs, and got about 10% return.
I've used TQSL to sign my uploads.

From: Keith Morehouse
Topic: 1881 Message: 1881

...looks like a good time to post this :)

With the successful uploading of the recent NAQP & ARRL RTTY logs, I have hit the 250,000 QSO mark in LoTW (combining my personal logs (3 different certificates) and logs for K9NS, with whom I do trustee duties).

No problems, no worries.

Overall, we're running slightly less then 10% QSL match/return rate. But, for 2004 fall/winter contest logs, I've seen a DRAMATIC increase in matches - sometimes as high as 30%. This is upon posting a log, roughly 30 days after the contest ended.

I also post K9NS logs to the E-QSL site, where we're running slightly better overall % rates. But, they've been around longer...

Geez, Hamish... I've been trying to let this thread DIE... but you and others keep asking me stuff
and making comments that, to be at least polite, I should address. But please, let it go now...

My specific "dislikes" with the LOTW software are:
(1) there are too many concessions to security and not enough to simplicity
(2) the certification process is insufficiently user-friendly, and gives users too many opportunities to make mistakes.
(3) the (unnecessarily) unique Private Key Infrastructure (PKI) introduces an unjustified level of
user difficuty.

All of which is just techie-talk for "LOTW is unnecessarily difficult to use"... which is what I
have been saying all along.

Why hasn't ARRL fixed it yet?

(1) "resource limitations"... translation: insufficient program funding.
(2) "programming resource limitations"... translation: insufficient manpower (due to insufficient
program funding)
(3) the 2004 ARRL Operating Plan included additional manpower for software, but very little work has
been done since LOTW rolled out in May 2004.
BOTTOM LINE: NOT ENOUGH PRIORITY OR MONEY FOR LOTW

Why isn't there a higher priority and more money for LOTW?

(1) ARRL is still funding efforts to "fight" BPL. Ed Hare W1RFI, ARRL's best and brightest tech guy,
says that BPL can't work profitably. Don't they believe him? There are other more technically
feasible, less problematic, and therefore much more potentially profitable broadband distribution
technologies out there that will eventually supplant BPL... it's a dying horse, it's doom is sealed,
all we have to do is be patient. So why throw more money at beating that horse? Throw some at LOTW.

(2) ARRL leadership is afraid that if they spend money on LOTW which they think is only of interest
to a minority of the membership, the majority will be unhappy. So they want LOTW to be self-supporting. They think they've spent enough on LOTW already; and they don't want to spend more.

****
In the real world, "good" and "bad" software is defined by how many users find it easy to use and
productive. In the real world, if a piece of software is unnecessarily complex, I throw it away and
buy another one that's more user-friendly. The marketplace resolves the issue: the "good" software
becomes popular, the "bad" software goes off to the dollar discount store.

With LOTW, there's no alternative software. So all I can do is tear out my hair, jump up and down,
and tell ARRL and all you wonderful (but a little dense) folks here on the reflector that something
needs to be done to make LOTW easier to use.

Now, Hamish, is that what you were looking for? Can we let this thread die, please?

73, Jerry K3BZ

Illogical and incorrect ... the shared key (public/private key) infrastructure is necessary to maintain the integrity of the system. Without "signing" the original entry, it is not possible to guarantee the authenticity of the record. The is the equivalent of inspecting the original "paper" QSL for changes or forgeries.

It is the infrastructure that distinguishes Logbook of the World from and insecure and fraud prone system like eQSL or "QSL by e-mail."

Joe... Joe... Joe....You'd be correct if PKI was the only way to achieve "reasonable security" for
LOTW.

It's not.

PKI introduces an unjustified and unnecessary level of user complexity. Hindsight being 20/20, I
think the guys at ARRL know that now....it's just that they have this system with PKI, it's over-the-top and makes things too complex as compared with a reasonable approach, but heck they're
stuck with it because management won't give them any budget to go back and fix it, or replace it
with something that gives an adequate level of security without making it such a pain to use. I
don't detect any "pride of authorship" defending, but there may be a bit of that... nobody likes to
be wrong.

I have seen this exact scenario countless times in a 25 year management career. And in the Government. I'm all too familiar with it, and the only way to get anything done about it is to ...
jump up and down and point at it until it gets noticed by the powers that be. How about you help me
do that, Joe, OK?? If not, will you Puh-leeze just let this thread.... DIE???

73, and I mean that with all possible affection.... Jerry K3BZ

Why don't you want to discuss this? Your points are anything but
unanimous.

> My specific "dislikes" with the LOTW software are:
> (1) there are too many concessions to security and not enough to simplicity
> (2) the certification process is insufficiently user-friendly, and gives users too many

> have been saying all along.

It's (arguably) too difficult to use through TQSL + the web interface.
There's no reason why it should be difficult to use by end users once
integrated into log programs like DXKeeper.

All of your points (which are almost all the same) can be solved with
some user interface changes, eg avoiding TQSL.

In my interpretation, TQSL is a demonstration of the tqsllib.dll
library which is the core of the implementation. It lets us get our
logs signed and uploaded, but I don't see it designed to be a long-term
solution.

How long before it dies, though? Is a few years of interference before
the providers realise it's uneconomical acceptable to you? I think
effort spent on fighting BPL IS worthwile, and ultimately more
beneficial to amateur radio than LoTW.

The ARRL don't need to do anything to make easier-to-use software.
The TQSL program and library source code is available. Developers can
write friendlier software today.

Hamish.... To answer your question, many on this reflector are tired of this discussion. And it's
pointless to continue it here. Anyone here who's been reading this thread has the info they need to
take a position. Anyone here who wishes to write ARRL and boycott LOTW until it's fixed is already
doing so. So please, let this LOTW thread die now.

As to BPL, that's dead already. It won't lie down yet, but it's dead. BPL was never really an
issue... because BPL never had any chance of succeeding in the first place. The laws of physics
would not allow it (BPL won't work). ARRL's own tech people said so. Plus, the laws of economics
wouldn't allow it (BPL isn't profitable compared to other technologies coming up). There is
absolutely no doubt about this. Continuing to spend money to defeat something that is already
defeated is irresponsible. It's called "beating a dead horse".

And LOTW needs that money.

And last... you wrote: "developers can write better software today"... I KNOW THIS. I'm just trying
to get someone at ARRL working on DOING IT.

OK, Hamish... that's it... no more, please. If you have more questions, please write ARRL, OK?
thanks and 73, Jerry K3BZ

Jerry,

> Joe... Joe... Joe....You'd be correct if PKI was the only way
> to achieve "reasonable security" for LOTW.

It's not just the security ... shared key encryption also provides
data validation. If all one wanted was security, there ARE other
ways to handle that. However, what you fail to acknowledge, the
system has concerns other than login (access) control.

A station in the middle of nowhere can use a certificate and
tQSL (or a more user friendly client application) to sign,
encrypt and compress the log file. That file can be placed on
a floppy (or CD, DVD, etc.) and sent by mail, courier or even a
bottle to another person/place for up-loading to LotW. Yes,
it's more complex than "UserID/Password" and an https:// web
site but it is infinitely more flexible and secure.

What you object to isn't the public/private key encryption ...
it's the lack of intuitive (to you) client applications. That
problem will only be resolved by the availability of properly
documented client code libraries.

Even the development and release of the client libraries will
not solve other issues with LotW ... the lack of promotion,
the relative difficulty for non-US users to register, and the
relative low levels of participation caused by the language
issues and registration hurdles.

Jerry,

I know you are a reasonable guy, and deserve a reasonable explanation as to why things are-the-way-they-are with LOTW. Some of the rest of you may learn a thing or two by reading this diatribe.

Somewhere in this thread, either by you or by others, people have expounded on how banks seem to be able to set up on-line processing of transactions with great ease. They do it with seemingly seamless perfection. But they do this at great risk. A little secret from a bank examiner (me)... New account processing is the area of greatest financial risk to every bank. On-line wires are a far greater risk than loans and deposits combined. The fact is, LOTW uses EXACTLY the same procedure as banks, the IRS, the FCC, OCC, US Dept of Ed, US Dept of Transportation, etc., etc.

When I set up my FCC account, I started the application on-line and then they assigned a PIN that allows me to continue processing my applications. They MAIL me the pin to the correct address. Presuming that I know all the other information I need to know to complete the application, they let me in. When I set up on-line processing with the IRS, which allows me to sign and file tax returns on-line, and access customer accounts with the IRS, they used the same procedure with two exceptions (1) I needed to know my personal adjusted gross income for the previous years, and (2) they needed my finger prints on file (you should have heard the hoots-and-hollers at the local PD when I asked to be finger printed). When I set up my account with the Federal Reserve Bank of Minneapolis, which allows me to file my banking client's quarterly and annual financial reports to the Federal Reserve Bank, they used the IDENTICAL same procedure. When I helped my daughter to sign up for her college financial aid, I did this on-line too. Guess what? The IDENTICAL procedure was used, and I signed the application on-line using pre-designated passwords. Slight variations on the same theme, but all were identical to LOTW. The exception is my own bank. And I'd like to explain why this relationship is different.

The procedure in every case is to prepare an application for an account. To provide some guarantee that I am me, they mail the confirmation code to my last known address. Once received, I can then continue processing my business. Along the way, they ask all sorts of goofy questions to verify that I am me--mother's maiden name, city of birth, my adjusted gross income, etc.--all externally verifiable by them. The only reason a bank (and I group credit cards and financial brokers with this group) procedure is somewhat different is that they also provide me a MAILED monthly statement, to which I respond confirming receipt with a check for the balance due--EVERY MONTH. In each case, these banking relationships started with a complicated application that included checking with the previous bank AND looking at the "black list" of no-good-dead-beat banking customers (yes, there really is a black list, and if you are on it, you will NEVER get a checking account at a bank until you straighten out the mess you created to get on that list).

So the difference in all these identical sign-up procedures--bar NONE--is the fact that when monthly correspondence occurs already, there is no need for additional internal controls since this particular control is being performed every month. If you walked into a

bank and attempted to open an account, complete with authorization to make wires, I can guarantee that you will be met with great difficulty. Frankly, it may be impossible.

So LOTW is not even remotely unreasonable. If the ARRL LOTW area was sending you some statement periodically, to which you needed to respond with a confirmation (like a check for a balance due), then the certificate process could be eliminated completely. Frankly, there is no reasonable way around this. If your protests fall on deaf ears, I suspect it is because a very many very smart people--inside and outside the ARRL--have looked at these issues for years. This IS the proper way to accomplish what the ARRL fully intends to retain as secure--that being the DXCC desk.

I hope this helps you understand why the world spins the way it does... At least re:LOTW...

From: FireBrick
Topic: 1891 Message: 1891

Created by DXBase2005
https://home.comcast.net/~w9ol/reports/lotwprev12mnthsonly.txt

Note: this only counts qso's made in the last 12 months ending Jan. 32 @23:59Z, that were uploaded to LoTW and subsequently resulted in a LoTW qsl.

This does not count LoTW qsl's received for qso's made & uploaded more than 12 months ago.

And a note to the list moderator and readers.
If you feel this stats report is inappropriate, let me know and I'll discontinue submissions.

But in the last few months, I've seen a large jump in non USA submissions and also contest log submissions.

Ya might be a Computer Redneck if Ya think a surge suppressor is a pill for diarrhea.

This is the LOTW mailing list. What else should we discuss here?

> And last... you wrote: "developers can write better software today"... I KNOW THIS. I'm just trying
> to get someone at ARRL working on DOING IT.

The ARRL can't integrate LOTW into your favourite log program - only its
author can do that. I'm not convinced that much needs to be done by the
ARRL to improve LOTW; mostly it needs integration now from third
parties. I would like to see the ARRL get WAS and other awards
integrated though.

1893. LoTW - documentation issues

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-01 00:27:26 UTC
From: salc_sr
Topic: 1893 Message: 1893

Greetings,

From the many postings I've read on this group, it is safe to say that a lot of people are having trouble with this application. I will tell you up front that I am one of them. I see the great potential that LoTW has. But if it is seen as awkward and cumbersome to use, some people will not us it. That alone will prevent LoTW from reaching its full potential.

I think the documentation is about as bad as any I have ever read. I had to read it over and over before I had a successful data transfer. I felt great that time. Since then I've been trying to get a new certificate for a previous call and I am having problems again.

I really want to use LoTW, because like is said earlier, it has a hugh potential. I think the ARRL documentation is confusing. It is not clear to the casual user like myself. I think it needs something written at a high level that is a clear description or how the software works and how the user interacts with it. I think the addition of a flow diagram would help immensely. It would be nice if one of the power users in this group with the writing skills would create something like I described and post it here in the file section for all members of the group to access.

Is there anyone out there who wants to see LoTW succeed willing to help?

Jerry,

> Joe... Joe... Joe....You'd be correct if PKI was the only way
> to achieve "reasonable security" for LOTW.

It's not just the security ... shared key encryption also provides
data validation. If all one wanted was security, there ARE other
ways to handle that. However, what you fail to acknowledge, the
system has concerns other than login (access) control.

A station in the middle of nowhere can use a certificate and
tQSL (or a more user friendly client application) to sign,
encrypt and compress the log file. That file can be placed on
a floppy (or CD, DVD, etc.) and sent by mail, courier or even a
bottle to another person/place for up-loading to LotW. Yes,
it's more complex than "UserID/Password" and an https:// web
site but it is infinitely more flexible and secure.

What you object to isn't the public/private key encryption ...
it's the lack of intuitive (to you) client applications. That
problem will only be resolved by the availability of properly
documented client code libraries.

Even the development and release of the client libraries will
not solve other issues with LotW ... the lack of promotion,
the relative difficulty for non-US users to register, and the
relative low levels of participation caused by the language
issues and registration hurdles.

73,

... Joe, K4IK

I guess that's fine. There are two kinds of hams. Those that use LOTW, and those that don't. Frankly, by not using it you are in the majority. You are more than welcomed to be part of either group. It's your choice... I was only trying to explain about why there are "deaf ears" to eliminating the certificate process.

If you can figure out how to do it and retain security, I can make you a very wealthy man, very quick.

I'm still waiting for somebody to develop a QSLing application that figures out all this stuff--direct QSLs, LOTW confirms, pending, routes, award paperwork, the works. I'd gladly pay for such an application. But it doesn't exist and likely will not because it is a very complicated process to track it all and incorporate all the features I would want to see in such an application.

73 and good luck to you.

From: Jerry Keller - K3BZ
Topic: 1893 Message: 1901

I'd be happy to help, Sal, but I'm afraid I'm in the same boat as you. I find LOTW one of the most
frustrationg bits of software I've ever encountered. The concept is very good, but I think the
program is poorly conceived and poorly executed. It might reach some of the program goals, but it
fails miserably in the user interface. It needs fixing, and only ARRL can do that.

If there were another piece of software we could go to, the marketplace would force ARRL to make
changes or lose customers. But LOTW is the only game in town. About the only thing I can suggest to
you as a way to exert pressure on ARRL to fix it is to ask you to e-mail the go-to guy for LOTW at
ARRL HQ - Wayne Mills N7NG N7NG@... and tell him the same things you said here on the
reflector. I have done that and I've also written to my Division Director and ARRL's president, Jim
Haynie W5JBP. I told them all that until LOTW is fixed, I won't be using it.

There are great guys here on the reflector, Sal, that will help us thru the LOTW maze if we ask.
I've chosen not to do that because I would rather see the software and documentation fixed so you
and I and many, many others won't need so much help, now or in the future. Then we'll know we have
some decent LOTW software.

Hi All,

Further to what Ford, and others, are saying and realizing the genuine usage problems that Jerry is encountering,
I assume that all of the originators of complaints regarding their LoTW usage difficulties have computers.
Being amateur radio operators, they also own and use relatively expensive radio equipment and antenna systems.
That being said, why not make a further, rather small, investment in a good, up to date, computer logging program.
There are several of them out there that make LoTW uploads and downloads a complete 'no-brainer',
necessitating only a few clicks on the mouse or keyboard to successfully accomplish the above tasks.
Then make use of your printer to print out the instructions, found on the LoTW web site, for further,
detailed, study of the use of the many other LoTW facilities and features.
We need to get more people to use LoTW, not scare them all away.
Try it, you might like it.
My LoTW QSL return rate is a dismal 3.8 %.

1906. How to fix LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-01 14:58:47 UTC
From: c22yacht
Topic: 1906 Message: 1906

Speaking as a technical writer and IT business owner, here is how I would fix LOTW:

1. Have one of the on-staff technical editors write a lucid set of instructions on how to set up and use LOTW. This should be written so that it would be easy to translate into other languages. See www.stc.org for information on how to do this. The manual should be about 10 pages in length, which by professional estimating standards should take 30-40 hours to write.

2. Have a usability or user interface design specialist design a new interface for the application. Considering the low number of screens, this should take approximately 30-40 hours also, including programming the front end as a VB or .net application.

So, the entire effort should take 60-80 hours. If ARRL paid someone 75 dollars per hour to do this, it would take $4,500 to $6,000 to fix the application and its support materials. If volunteer or salaried staff were to do this, then the cost would drop.

I find it hard to believe that ARRL can't spend this amount of money to fix as high a profile service as LOTW. Heck, they could sell some of their really fancy equipment at W1AW to finance the effort.

The reality is probably that getting LOTW right is a low priority at ARRL. Its right in the same category as marketing and public relations to increase Ham Radio's visibility to potential new membership. I've been a member of ARRL since 1976 and will be a member till I die. But I sure wish they would focus on what is important so that the organization, and ham radio, does not fade away.

ARRL - are you listening? QSL?

>
> 73, Carl VE9OV

Carl,

I have 4 certificates to cover my previous calls and QTHs. With 23,092 QSOs uploaded, I have a 14.5% return rate. With each contest, I see loads of new matches. But the 'benefit' of using LOTW has not yet happened for this op.

I measure success is by my results. Results are a function of participation. The ARRL measures their success by the sale of credits. I echo Carl's thoughts in terms of not scaring people away from LOTW. It is a marketing problem. Is it easy to use? Apparently not for some. But with each additional station that uses LOTW, there are additional matches that could result in additional purchases of credits. Can it be made easier to use? Without a doubt. But this takes money, and focus. Money that is supposed to come from the purchase of credits by users.

I have yet to actually 'purchase' any credits. I'm waiting for some additional award that can be received before I do write the check. If a WAS award was offered to me (I have yet to actually 'paper' apply for WAS, WAC, WAZ, etc.), I would probably purchase enough credits to secure my 5 band WAS all in one shot. That's a 250 credit purchase--and I'm just one op. Additional credits would be purchased for 160M and WARC bands too. And I might even get excited about working on the challenge at the same time. Lots of additional $$$ for the LOTW folks to play with, progress would happen if many jump on the band wagon and start buying credits. I would write the check. I'm betting others would too.

As it is, my DXCC stats are lacking. I have a 5 Band DXCC in my log, but the LOTW stats are not there to permit my application for additional bands. On some bands, more than one DXCC. Here are my summary stats as of this AM.

23,092 QSOs, 3,349 matches (14.5%)

Your Logbook DXCC Account (N0FP - UNITED STATES OF AMERICA)
Account Status
Award Selected Applied Awarded Total / Current

Mixed * 48 0 117 165 / 165
CW * 35 0 102 137 / 137
Phone 71 0 16 87 / 87
RTTY 18 0 0 18 / 18

160M 20 0 0 20 / 20
80M 26 0 16 42 / 42
40M 41 0 0 41 / 41
30M 4 0 0 4 / 4
20M * 33 0 102 135 / 135
17M 3 0 0 3 / 3
15M 73 0 0 73 / 73
12M 3 0 0 3 / 3
10M 66 0 0 66 / 66
6M 2 0 0 2 / 2
Challenge271 0 118 --- / 389
* = Award has been issued

I applied for and received a paper submitted application for DXCC, CW endorsement, and 20M endorsement. My log contains DXCC on 80-40-20-15-10, but as you can see, my credits showing up on LOTW are not allowing me to apply for any additional endorsements. All of those awarded so far are for paper submitted QSLs. And the LOTW interface reflects this effort beautifully.

The way I interpret this, there is going to be a 'critical mass' that causes lots of people to start buying credits. It is the credit buying that will get results. I have no clue as to how many credits have actually been purchased by people, but my guess is that it is abismally few. I have to believe that the ARRL's measure of success is largely based on the number of credits sold. It's good business for them to evaluate it in this manner.

So how do we get LOTW to that critical mass? I would vote for adding WAS to the equation. If my view is anything like the typical, then lots of credits would be purchased by many people, and the ball would start rolling.

I also think VUCC would be an excellent addition, as would incorporating the additional VHF/UHF bands. There are lots of folks participating in VUCC and they too need a venue for tracking their activity. Again, lots of opportunity to 'sell' credits.

Topic: 1906 Message: 1909

Hi Bob,

Love your suggestions. As yet I don't use LOTW but would like to as soon as I can figure how to get 80,000 qsos out of an Excel file into the proper format for LOTW. Several years ago I was an Alarm engineer for the local Bell telco and worked on a software design team for an Alarm Engineering program. Our part was to work on the user interface screens. What you said was exactly our consideration. We looked at screen designs and software functionality for the least knowledgeable person using our program. The method works great and only minimal instruction was needed for folks using the Alarm Engineering program for the first time.

Hope the ARRL listens to great suggestions like yours.

It is my understanding that WAS and several other awards will be added to
LOTW. Keep the faith. You have to crawl before you walk. All this
pissing & moaning accomplishes nothing but pissing & moaning. Why don't
you sit down and write a COURTEOUS letter to LOTW and ask a few questions?

Mike,

Try: http://www.storm.ca/~ve3iay/spreadsh.html

I found LoTW relatively easy to install and operate as did many of my low Tech friends.

1912. Instructions?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-01 16:06:13 UTC
From: rlb
Topic: 1906 Message: 1912

I posted this within the past month but no replies. I do not consider myself experienced enough to check to see if these instructions are correct so if one of you more experied LOTW users could verify evan though it is for the beta run.

What do you think??

Maybe we could update them if need be and post it as a signature to our emails??

I came across this today while reading a post on QSLing on eham.net.

http://www.aa5au.com/lotw_beta.htm

While this has to do with the beta version. I was wondering if some of the people on the list could take a look at it and see what they thought of it and if it was accurate and it was something that we might recommend.

Quite interesting as it gives screen shots that might make it easier to set up LOTW.

From: Joe Subich, K4IK
Topic: 1906 Message: 1913

Bob,

I would add one other item to your list:

The client side libraries are a mess ... they contain dead (or
depreciated) code and the only documentation is terse comments
in the code. I suspect a good programmer could clean up and
fully document that code in 60 to 80 hours.

That project would be my FIRST priority as it would enable any
third party developer to immediately add transparent LotW support
to their logging application. As it is, those few developers
who provide for transparent signing and upload of log data have
had to develop their own routines from the basic specification
or reverse engineer the public libraries.

73,

... Joe, K4IK

"Technical editor" and "lucid" in the same sentence ... for software?
Doesn't happen!

> estimating standards should take 30-40 hours to write.

(See my statement above)

I'm sure someone can bang out a 1 or 2 page LoTW cheat sheet in a couple
hours. (I just followed the instruction on the LoTW Web site, so it was
no biggie for me to get going)

Ford... I re-read your message below. It seems well-thought out and well-informed. My earlier reply
wasn't. Mea culpa.

What I should have said is... thanks. I don't really understand software mechanics, but I think I
do understand your explanation....and I see why the LOTW system security is designed as it is.

Perhaps what I am really looking for is not a reduction in security, but rather a "nicer face" on
LOTW, one that smiles and takes my logs and gives me whatever credits toward awards I may have
earned.... without all the fuss and aggravation.

Maybe that means another piece of software that will "manage" the annoying LOTW process for me and
those like me who find it too frustrating to go in barefoot. I suppose some of the logging programs
can do that to some extent already.

By the way, I've heard from Wayne Mills N7NG at ARRL HQ that my protests have not gone unnoticed,
and that he is developing a plan to make LOTW easier while maintaining program goals. He can't put a
date on it yet, but at least that's a step forward.

Again, thank you. 73, Jerry K3BZ

Note that it's not necessary to wait for ARRL to do this. tqsllib is
open source code hosted at SourceForge. Any good programmer willing to
volunteer some time could pull the source from SourceForge, clean it up,
and submit patches. If you can't get enough attention from the Trusted
QSL development team to get your patches inserted into the 'official'
code base, you can always fork it, and make your own version available.
~ Although I have a hard time imagining that the development team would
turn down patches that merely cleaned up code without changing current
functionality.

1917. Re: How to fix LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-01 17:19:55 UTC
From: Dave Bernstein
Topic: 1906 Message: 1917

While better screens and better documentation would help, a more comprehensive approach is required to minimize user-visible complexity.

At present, LotW is a system comprising

- the TQSL application

- the TQSLCert application

- several web pages in http://www.arrl.org/lotw/

- files bearing suffixes .tq5, .tq6, .tq8, and .p12

- certs and keys stored in /documents and settings/user/application data/trustedqsl

The user applies these facilities in multiple scenarios:

1. install LotW

2. obtain a certificate

3. create a station location

4. modify a station location

5. sign a set of QSOs

6. upload a signed set of QSOs

7. verify that uploaded QSOs have been accepted

8. apply for award credits

9. verify that award credits have been granted

10. renew a certificate

11. correct previously-uploaded QSOs

12. relocate LotW from one PC to another

13. recover from file system damage

etc.

Ideally, one elaborates each scenario, and then designs the software to provide smooth, consistent automation using concepts already known to the userm community, e.g. "QSO", "Operator", "QTH", etc. Given that we already have an implementation, I suggest

a. fully enumerating documenting all of the usage scenarios; this
provides immediate assistance to the user community, and will help
identify the most egregious "complexity leaks" to be addressed via
incremental modifications to the LotW system. Each usage scenario
becomes a section of the documentation:

To install LotW on a PC, ...

To install LotW on a Mac, ...

To apply for a certificate, ...

To install a certificate ...

etc.

b. updating the LotW system architecture to better conceal complexity
from users (based on a above), and then incrementally update the
componentry to achieve this architecture over time -- ideally
addressing the biggest complexity leaks first. As components are
improved, the usage scenario documentation should be revised to
reflect the improved automation.

73,

Dave, AA6YQ

That's fine ... the problem is that the Trusted QSL development team hasn't been interested in documenting tqsllib "there is enough documentation for a competent programmer to get it running."

I'm not a C programmer or I would do the job myself. Those developers who could make use of the libraries to provide tQSL integration in their logging program have it well down the priority list because their resources are more productively expended on their core program.

If the Trusted QSL Development team does not feel the need to support the client side of the equation, it is up to the ARRL (Member Services and the Board) to step in and either tell the development team to produce a usable user library or contract the job to an outside programmer.

Other than a sad lack of promotion, integration of the LotW client functions into the day to day and contest logging programs used by the majority of active amateurs around the world is the biggest hurdle the growth of LotW.

Randy,

I checked Don's site ... It's quite good and probably provides
enough information for the average user to follow even though
it is based on the beta test.

Three pages could be updated (improved) ...

Page 4 (Loading a certificate) needs the "live" process
Page 5 (DXBase 1004) should be generalized for other logs
Page 7 (Accessing LotW) needs to be updated

Topic: 1893 Message: 1920

Hello Jerry,

Thanks for your offer to help. I agree with your comments about the marketplace and the software. I also agree that it is the only game in town. That is precisely why I want to us. It is the only game in town.

I will take your advice and write to the ARRL and I will work with others on this reflector who are willing to help me. I need to create a cheat sheet for me to be successful with LoTW in its current state. I will use the cheat sheet to guide me through the documentation, the software and the certificate process.

The ARRL is a bureaucratic organization and it is going to move slowly. I just don't what to wait for that to happen.

Thanks again and 73.

Sal WC6SAL

This makes a ton of sense to me. All too often, software documentation is done from the programmer's point of view, and amounts to "if I do this then it does that." The scenario idea should be the starting point for all documentation, IMO -- "If you want to do A, then do the following..."

ARRL, are you listening, or has the last ten days on this reflector deadened you as much as it has me...?

1922. shift in LoTW qsl sources

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-02 19:50:35 UTC
From: FireBrick
Topic: 1922 Message: 1922

When LoTW first started, it was mainly USA qsls.
The last few months I've noticed a greater Non-USA participation.

So I asked the Report Guru, Joe Glockner, WA6AXE, to produce this DXBase 2005 report.
I've also noticed a much quicker uploading of contest logs.
Contesters seem not to be worried and holding back on uploading contest logs.

https://home.comcast.net/~w9ol/reports/lotw-usa-nonusa.txt

Actually, I think the shift would have been even more dramatic except in the last few months I've done more stateside contests than DX.
(crummy antennas and an amp that has failing health)

1923. Time Variance

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-05 02:39:09 UTC
From: Jerry Keller - K3BZ
Topic: 1923 Message: 1923

Logged times may not always match, due to differences in clock set times, computer clocks, etc.
Logged time needs some leeway or there will be too many legitimate QSO's that won't match. But how
much leeway is appropriate?

Presently, I understand LOTW allows a +/- 30 minute variance. Perhaps it should be more... let's
say 60 min, or 90, or 120. Then, of course, what about date? If I log 2346Z on 01 April and the
other station logs 0014Z on 02April, that's within 30 minutes, but on different dates. Won't happen
much but the greater the time leeway allowed, the more often it will occur.

How many QSO's in LOTW would be matches except that the logged times are 31 or more minutes apart?

This is one of those situations where you can't make everyone happy... so where do you fairly draw
the line?

1924. Some Basic Questions

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-05 13:17:30 UTC
From: Jerry Keller - K3BZ
Topic: 1924 Message: 1924

I believe LOTW now compares callsign, mode, band, date, and time and if these parameters match, a
valid QSO credit is issued to both stations.

As I understand it, callsign, band, and mode are go/no go criteria, but date/time can vary in a 30
minute window. So, if there is a date/time variance of more than 30 minutes, LOTW does not recognize a valid QSO.

Question: Is there any way LOTW advises either QSO party of this?

Any more than a few minutes is a mistake. 30 minutes is plenty.
Why reward mistakes?

I'm sure the calculation can cope with a change in date.

No. LotW is designed as a double blind system to prevent
"fishing" for broken QSOs. Read the FAQs on the LotW web
page.

1927. sites with listings of LoTW submittees

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-05 15:13:19 UTC
From: FireBrick
Topic: 1927 Message: 1927

Recently sites has shown up that list DX stations/Dxpeditions who have uploaded their logs.

I believe, this is with the intention of informing people that may have not received an expected LoTW from a station, that possibly an error has occurred in the logging of said station.

Then it would be up to the individual to decide if he wants to email the DX station to ascertain whether the qso was correct in it's data.

Previously when I would report a qsl reception and it's route to the dx-qsl reflector, I would include the occasional important (to me) LoTW qsl reception.

I'm now reconsidering this as it may promote phishing (borrowing the jargon from spammers).

I'm curious as to the opinions on this from fellow LoTW and DX-Qsl readers.
While the information that a DXpeditions logs were uploaded may become common knowledge, the individual DX station LoTW information may not.

What do you guys think?

I'm not sure that is correct. I don't believe you can type in someone's call into LoTW and find out if he has uploaded logs.
I 'think' it will only indicate if he has uploaded qsos with you.

I'll have to check this but maybe others can confirm.

It's very correct ... look at the top of the LotW webpage for
"find call." Go to that page, enter a call, and if that station
has uploaded logs LotW will tell you when logs were last uploaded.

There are some "gotchas" ... if I am entering logs for some of my
old (AD8I) contest operations and working back in time, the log
you are in may not have been uploaded. If the persons who have
either of my old calls (AD8I and W8IK) are using LotW, the last
upload of logs found with those calls might be them or might have
been me doing some "backfill" with logs I've recently found.

Still, I quite often use the "find call" if I'm tuning across a
band (or see a spot for) and find a station for which I could use
a confirmation. It the station uses LotW, I'll give them a call
otherwise, I'll wait for the card I've already mailed.

If you do a "Find Call" it will give you the date of the station's last
upload. It matters not if you have ever had a qso with that station.

The "check call" also doesn't tell you that a station has download all or his most recent logs. Only the he downloaded "something" on the date shown.

I rarely go to the Opening Screen of the LoTW site.
I created a shortcut that just takes me to my log site so I probably missed/forgot about the ability to see who has uploaded logs option.

Thanks for the tips guys.

Yep, finally got in a few minutes ago.
I found that page you mentioned.

Like I said. I'd created a shortcut that submitted my signin and password and took me straight to My Qsl's so I'd been bypassing those pages for over a year.

And since I can't remember what I had for lunch....it was inevitable that I wouldn't remember those pages were there.

From: Ford Peterson
Topic: 1939 Message: 1939

I just ran the 10 hour long MN QSO party today. What a blast! But now I have a headache. The LOTW certificates... 906 QSOs in 10 hours. Man that was fun!

We ran 19 counties in MN today. 450 miles in a M/2 operation on wheels. In each county, the rules state that a three letter county designation is to be used. E.g. N0FP/MEE for operation in Meeker County. N0FP/POP for operation in Pope county. Does this mean I have to bifurcate my log to indicate operation from each county? In this case, 19 certificates to operate mobile in these counties and have them qualify? And qualify for what? DXCC? I did work a HB9 and a CU2, but everybody else was US or VE. And county awards are not supported by LOTW.

I'm tempted to just leave these out of my log on LOTW. Frankly, I leave them out of my station log too. If confirms are needed by the county hounds, I just go direct with those anyway.

Observations? Am I missing something here?

> VE. And county awards are not supported by LOTW.

There is no structural impediment to using LotW for county awards.
The only necessary actions are for the county award sponsors to
set down with ARRL and work out the logistics and ground rules.

If you want the QSOs to be available through LotW you have two
choices - depending on how you chose to log them:

1) you can get certificates for each county e.g., N0FP/POP, etc.
and upload with the /POP, etc.

2) you can skip the additional certificates and simply create
separate "locations" for each county in tQSL (call, county,
ITU zone, CQ Zone, State, and County). Sort your log by
county and upload it in 19 "chunks" attaching the appropriate
county "location" to each "chunk." In that case, all QSOs
would simply be N0FP.

The other station will need to show the appropriate call (either
N0FP or N0FP/POP) in their log. If it were me, I would use the
second approach ...

I had the same dilemma with my Florida QSO Party logs.

We signed NJ4M/cty from several counties. Being able to look at the logs afterwards, I see folks logged us one of 3 ways

NJ4M/cty
NJ4M/M
NJ4M

So, here's what I did.

Obtained a certificate for each NJ4M/cty call we used. Then signed and uploaded each log to LoTW.

Obtained 1 certificate for NJ4M/M. I signed each log with the correct county, and uploaded those.

Using my existing certificate for NJ4M, I signed each log with the correct county, and uploaded those.

It's a little extra work, but it'll maximize the QSL returns, since at least one of your logs will match the way others logged it.

If someone logged something different that those 3 ways, they're SOL.

From: John Bastin
Topic: 1942 Message: 1942

I recently made a DXCC submission of LoTW credits only. There were 186 credits, no new certificates, new endorsements only.

I made the submission electronically on Sunday, 30 January. Parenthetically, the submission shows in the "Recent Applications" list as "mail logged on" Sunday, 30 January. Fees paid were the ten dollar fee for first application in a year, and the "per credit" LoTW fees (no additional charge for over 120 credits submitted, as occurs with paper cards).

On Friday, 4 February I received by US mail the updated DXCC Award Credit Slip and the endorsement stickers. According to the slip, the submission was received on 30 January and processed on 31 January 2005. I think this is excellent service that demonstrates the capabilities of LoTW.

Thank you, ARRL!

I'm a LoTW user who works a lot of DX while mobile
during my morning commute. Sometimes I will sign
with the "/mobile" sign and other times I do not.

If a QSO is submitted for credit under N1LF/M and
I only have a certficate for N1LF will I still receive
credit or not?

If I decide to get another certificate for N1LF/M,
can I resubmit my entire log this way...since I often
don't remember to log /M either...?

No. You will only get credit for an exact match. N1LF and N1LF/M are considered two different calls, and why you need two separate certificates.

> If I decide to get another certificate for N1LF/M,
> can I resubmit my entire log this way

Yes.

1946. Re: LoTW - documentation issues

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-07 23:13:20 UTC
From: Jerry Keller - K3BZ
Topic: 1893 Message: 1946

My comments in recent discussions here deserve a follow-up.

Early last year, I was one of many who had LOTW problems and was told to re-register. Very annoying,
but I did so, receiving a new username of k3bz01 and a new PW. That's what I've been using until a
few months ago when it all stopped working, and thinking I had to go thru it all over again, I got
very, very annoyed.

I just discovered that ARRL recently merged accounts for some LOTW members, and supposedly sent out
notices by e-mail....(I never got any notice, and was told they may have been swallowed up by my
SPAM filter... I don't use a SPAM filter. But that's not the point).

Anyway, they tell me they changed my username and PW back to the original ones. I tried them and lo
and behold, they work.

Apparently that was at the root of my LOTW problems. I tried the routine again... and it worked
fine. Just like you all said it should.

So... thanks again to all who tried to help me... and in the immortal words of SNL's Rosanne
Rosannadanna.... never mind.

1947. renewal notice

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-09 13:43:22 UTC
From: FireBrick
Topic: 1947 Message: 1947

Below is a copy/paste of the notice I received.
I'm pretty sure every user was sent one.
As the notice was received more than two weeks prior to the expiration date,
I had no problems renewing, noticing that one new certificate did not arrive in the same time frame as all my other 9 did.
Realizing I'd probably made an error, I resubmitted for the missing certificate and it arrived promptly.
The worlds email system is not perfect, occasionally my anti spam filter eats an email.
It may be a good idea for LoTW software to warn of impending certificate expiration dates.
(all my yearly software renewals sure let me know they want their renewal fees)

Just to be on the safe side, my DXBase2005 software, has a Special Dates feature, So I added the Certificate Dates to that calendar with sufficient time frame warning just in case my next LoTW generated expiration warning email goes astray.
(hint: I set the warning for my xyl's Sept. Birthday as this will help me stay out of the doghouse lest I forget)

Sometimes we can't ALWAYS rely on Big Brother. Sometimes we do have to take care of ourselves.

As far as I can tell, you must match the other station's callsign exactly.
If their certificate states that their call is W1XXX/P5, and your log
is for P5/W1XXX it won't match. I ran into this problem because my old
logging program (one that I wrote, so I'm to blame) required the
"prefix/callsign" format. I went back and fixed several QSOs after I
first uploaded my log to LoTW.

A purist would argue that you should have logged what they sent. I
think LoTW is being stricter than necessary in this case.

I figured this was the case, sine LOTW docs indicate that various
portable callsigns need individula certs.

Topic: 1952 Message: 1952

In the first week of the year, I submitted a Hybrid qsl submission.
Both LoTW and hardcards.
I properly indicated on the hardcard submission page to check for LoTW qsls.
I indicated that this was the first submission of 2005

On the LoTW site, I indicated I would be submitting qsl cards directly to the DXCC desk by mail.

When I received the cards back this week I see I was charged $10.00 above the return postage.

I may have misunderstood but I thought the first submission of the year was free.
Does a Hybrid, consisting of both LoTW and Qsl cards via mail count as one submission or two.

It's not the money, It's just that I was thinking they counted as a single submission.

If you want to see a comic strip, you should see me in the shower.

Hi Steve,
It's great that the D68C logs have been uploaded - wouldn't it be nice if this revolutionary idea caught one with the QSL managers of other DXpeditions (large and small)!

Although I haven't managed to hit the 10% mark yet, I have been able to claim DXCC mixed and phone from LoTW confirmations (and have to say that the service from both LoTW and DXCC desks was excellent). However, the number of active certificates is still abysmally low - and that is the figure that needs to increase dramatically for LoTW to become really useful.(Though the emphasis will no doubt change when WAS, WAZ, IOTA etc are added to the list of awards which can be claimed).

Of 310 countries worked and confirmed by cardboard, 129 have been confirmed also by LoTW and I am more interested in that figure at the moment. Hopefully, by next January, it will have risen sufficiently to make another electronic claim worth while!!

Ivan and the Group,

Your numbers are interesting. Of my 306 worked, I have 106 confirmed via LOTW. It is nice to watch the number of QSL's grow on an almost daily basis. Like money in the bank gaining interest! Also nice to see the DXPeditions uploading their logs. I still have two DXPedition logs to upload (J37VG and J3/W1RH) and will get to those as time permits.

1956. 5B DXCC via LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-17 05:49:25 UTC
From: lowga
Topic: 1956 Message: 1956

With thanks to the "Daily DX":

5BDXCC has now been obtained by KC1XX on Logbook of the world (LOTW) reports the ARRL. Matt's contest station has submitted logs to LOTW and has over 255,000 QSOs and just recently confirmed his 100th on 80 meters. On 160 meters KC1XX has 70 countries. Several other multi-multi stations (K9NS, K3LR, have reached 4B DXCC and are very close to 100 on 80 meters. Single-op K5ZD, Randy, also has 4B DXCC and is very close to completing his 5th band.

==========

I do find that RTTY DX ops tend to use LoTW
more than other mode operators, but I still think the
ARRL must do more (much more) to encourage
DX stations to use LoTW.

If I was to buy $20. worth of LoTW credits.
Can they be used as fees?

As they are on account, can they be used to pay for submission and return postage fees?

Just curious.

Dime: a dollar with all the taxes taken out.

I assume these are unrelated comments. KC1XX has never made a RTTY
contact.

I submit my logs using my logging software to create the .adi file that is signed.

I vaguely remember that a person could use a alternate method.
If he only needed to submit one qso he could fill out a online form or some such?

(Of course he would have had to apply for the proper certificates prior to that)

Or am I confused with something else?

Flabbergasted (adj.), appalled over how much weight you have gained.

You can use TQSL to create an ADIF file for a single QSO. (File, Create New ADIF File).
TQSL does no data checking as far as I can tell, so you must be very careful while entering your information to adhere to proper format.

>(Of course he would have had to apply for the proper certificates
>prior to that)
>
>Or am I confused with something else?

I don't know if there's any other way other than submitting signed logs via e-mail or the web. It wouldn't be all that hard to use the TQSL certificates as a browser authentication method that would allow you to fill in a web-based form that submits direct to LoTW. (At least for folks with a small number of callsigns and certificates.)

1961. LOTW on my Laptop

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-02-23 05:05:05 UTC
From: lowga
Topic: 1961 Message: 1961

I'd like to install LOTW (TQSL and TQSL Cert, along with the various certificates for my station) on my laptop as well as the shack computer.

I do a fair amount of mobile SSB work during my commute, and it would certainly be easier to upload contacts directly from there.

Will the software allow this? If so, which files do I need to copy from the shack computer?

Any help gratefully appreciated.

Les Rayburn, N1LF

Hi Les,

The laptop is no different from the desktop. Start by
downloading the program from the ARRL. You will need
a copy of the certificate file that you should have
made on the desktop. I don't remember how it goes
from there as it has been a while since I have done it
so maybe someone else on the board can guide you from
here.

Good Luck

There are two answers:

1) The proper way is to install a fresh copy of tQSL 1.10 on
the laptop and restore the .P12 files (certificate backup)
for each certificate.

2) The "unofficial" way is to install a fresh copy of tQSL
1.10 on the laptop and then copy the contents of the
"C:Documents and Settings\%user%\Application Data\TrustedQSL
directory (including the certs and keys subdirectories)
into the same directory on the laptop.

Note: this version assumes you are using an NT derived version
of Windows (NT 4, Windows 2000, Windows XP). If you are using
one of the flavors of Windows 98, the directory to copy is
different if you are configured for single or multiple user
mode.

Having read the recent discussion regarding the value of LoTW and the need to persuade more folks to sign up, I just wonder what would happen if there was serious world-wide up-take.

I normally check for new confirmations each morning between 0900-1000utc - well I try to, but most mornings I cannot access the LoTW web page (the ARRL web site in general is fine, but not the LoTW page). Perhaps some kind of house-keeping takes place at that time - when lots of Ws are safely tucked up in their beds!.

I have just tried to check my 'score' now (1545utc) and got the following:
Fatal error: initializeLOTWDB: -9807 - Too many users (task limit)

Not a frequent occurence I grant, but if that is correct with less than 10,000 registered users, what chance connectivity come the revolution?

Just a thought - Ivan G4BGW

There's a good possibility that that's users of the database, not users
of the web site (there are techniques that allow many users accessing a
web site to be handled with a small number of database connections).
The situation this morning may have been a case of several
other-than-website programs accessing the database, effectively locking
out the web site. If that's the case, then adding more web site users
in that case would not cause the same problem.

Interesting observation

On average I check my LOTW about every other day, often at various times of the day but usually late evening, and have never seen such a message nor noticed any particular slowing down in response times. I can only recall one occasion when I couldn't access LoTW and that, it turned out, was when they were integrating some systems.

I was told that they run a batch process sometime in the middle of the night to synchronize LoTW with the DXCC records. Don't recall how often this is done. You might just be hitting the "batch" time.

Wondering if it is only me...!
In the case of D68C... There online log shows:
VE9DX24.9CW
VE9DX21.0CW
VE9DX10.1CW
VE9DX28.0FM
VE9DX14.0SSB
VE9DX21.0SSB
VE9DX28.0CW
VE9DX28.0SSB
VE9DX18.0CW
VE9DX18.0SSB
VE9DX14.0CW
I received one match only from all the contacts. That was for the first contact Feb 11. The rest of my contacts were Feb 18 and after. Guess I am curious as to weather all logs were uploaded.
Can't see it being a time issue as I have contacts just before and just after where the time is fine.
Now on the matter of time... I ran into a time problem with YV0D on one contact. In contacting their qsl manager I found there clock was off by almost 9 hours. My thought is that they used a different computer to log their digital contacts and may not have set their clock. Again the contact in question did show up on their ONLINE log so I knew it had to be a time issue...
Any feedback, please feel free to drop me a line direct... 73 Andy (VE9DX)
ve9dx@...

I didn't receive LoTW qsl's for all of my contacts either.
Only like 3 LoTW qsls even though I'd gotten hardcard qsl's for all of my qso's.
Apparently they haven't gotten them all onto the system as yet.

All I can determine from the LOTW web site is how to transfer
Certificates by saving to a P-12 file, but no where do I see how to
transfer the station location data.

There is no "official" way to transfer the location information.
However, it is stored in the "station_data" file located in
"C:\Documents and Settings\%user%\Application Data\TrustedQSL"
(for Win2K and WinXP)

When my "old" computer died two weeks ago, I was faced with
the same problem. My "station information" was stored in the
"Application Data" folder in a sub-folder called TQSL. When
I found and copied that to the new computer everything worked
again.

1976. LOTW for WAS, etc

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-07 22:38:40 UTC
From: Jerry Keller - K3BZ
Topic: 1976 Message: 1976

Has ARRL given any idea as to when to expect LOTW to be tied to WAS and other ARRL Awards?

73, Jerry K3BZ

1977. Second Chances

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-10 01:53:33 UTC
From: Jerry Keller - K3BZ
Topic: 1977 Message: 1977

Below is a copy of a post I made tonight on the dx-list reflector, responding to several negative
posts I saw about LOTW. Since most of the "badmouthing" I mentioned was done here on the LOTW
refector, I thought it only fair to post a copy here. The guys that were patient and helped me
out--- they know who they are... and I appreciate it. LOTW is working fine for me now, and I have a
second chance at its benefits, thanks to you.

****

I badmouthed LOTW all over town, on the reflectors, and wrote complaint letters to ARRL.
Fortunately, a few patient guys finally convinced me to re-examine LOTW, give it another chance,
they stuck with me and helped me along, and I am very grateful that they did. Now that I know how to
work it, I think LOTW is a very good idea AND not all that difficult to operate. You do have to read
the instructions and follow them carefully, step by step. But if you do, it works very well.

My objections to LOTW were based on incorrect assumptions about the complexity, security, and
difficulty of operation, and I'm now convinced that anyone that can understand the menus and other
operating complexities of today's radios should... with a little patience... be able to learn to
operate LOTW.

LOTW deserves another look by everyone. This is a very good system and only looks complex because of
the need to maintain some semblance of integrity. I too compared it to a bank account, and asked
why all the big deal security. I think I was probably just being stubborn and blockheaded. I now
understand that banks don't upload data, or at least they don't do it in the same way, so they don't
open themselves up to hacking like the LOTW system does. It makes the security problems different.

While I once urged everyone to boycott LOTW, I would now encourage everyone to try it again, with an
open mind and a little more patience. It worked for me.

1981. Second Chances-ACLog

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-10 14:22:00 UTC
From: Les Rayburn
Topic: 1981 Message: 1981

I'd also like to applaud Jerry for being willing to reconsider his position. That
is a rare thing these days...wish more folks were willing to do it.

When I started DXing in December, I did a review and trial of most of the logging programs out there. I finally settled on ACLog by N3FJP. One of my requirements was that I wanted the easiest interface possible for LoTW.

ACLog requires you to have Tqsl set up properly, but after you've successfully uploaded the first file, ACLog then makes it easy to upload new contacts.

Using the software, I can upload literally a single QSO or hundreds after a contest, and both can be done with no effort. It will also download data from LoTW and update the log automatically.

For those who enjoy EQSL, it performs those functions just as easily. I'm not connected to the author, just a satisfied customer.

I still think the league has a lot more work to do in terms of gaining wider acceptance of LoTW. Special awards related to the program are my suggestion. Adding the ability to obtain WAS would also encourage DX stations to participate more. And integrating with CQ Awards would also be a big help.

I know that resources are limited, but I think the program would have been better served if they had worked out these issues prior to launch. The launch of the software seemed to be more of a knee jerk reaction to EQSL.

DXKeeper (the DXLabs Suite) also handles LotW seamlessly -
including multiple QTHs and multiple calls. It is currently
necessary to filter the log display and upload one call/QTH at
a time but that limitation will be gone as soon as the changes
necessary to allow tQSLlib do be called by applications written
in languages other than C++ are complete.

From: Ford Peterson
Topic: 411 Message: 1983

A friend of mine has not been paying attention to his 30K QSOs on LOTW. He was going to enter the entire list of 2004-2005 contest season QSOs and discovered that his certificate has expired.

Is it true that he will have to start over from ground zero and re-enter the entire list of 30K QSOs?

As I recall, the uploaded QSOs get purged after a period of time anyway. Is this true? If so, then should a guy be claiming credits before they get purged?

Once uploaded to LoTW, QSOs do not get purged. He won't have to upload anything already sent.
He should also be able to renew his certificate without losing anything - just use TQSLCERT to generate a renewal request and upload it. He can't sign a log with the expired certificate, but can use that to renew. (There may be some limit to how old an expired certificate can be and still be acccepted, but I'd give it a try.)

Use TQSLCERT to import it.
Run TQSLCERT, then select "File", "Load Certificate File".
Make sure the selection next to "PKCS#12 (.p12)" is made, then hit
next. Browse to your saved file, enter the password, and you should be
all set.

1987. New download for LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-11 17:50:00 UTC
From: rlb
Topic: 1987 Message: 1987

This just appeared on the ARRL web site. Think I might wait a week of so to see if bugs are reported.

New TrustedQSL software released for Logbook of the World (Mar 11, 2005) -- Version 1.11 of the TrustedQSL software used with ARRL's Logbook of the World system now is available. Windows, Linux and Mac OS X users are encouraged to update their systems. The new version fixes a serious bug that affected Linux and Mac OS X versions of the software. This bug caused users' saved certificate (.P12) files to be corrupted. Linux and Mac OS X users are strongly advised to install the new version of the TrustedQSL software and save all existing certificates into .P12 files. Older .P12 files saved from these systems should be discarded. Windows users of the TrustedQSL software should update to the new version, in part because the updated Windows version of the TQSL program now signs log data much faster. Instructions for downloading and installing the software are available on ARRL's LoTW Web page.

Art, Go to windows search and look for all files entering *.p12 The return will tell you it's location. Now it's not a windows file but the file you originally down;oaded with Lotw. The file contains your peronal certificate info.

The *.p12 files are wherever you created it. It is not a
file supplied by tQSL ... it is the backup file you create
when you select a certificate as specify "Certificate -> save"
in tQSLcert.

1992. Re: [ARRL-LOTW] .p12

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-12 02:24:50 UTC
From: Dave-GVK
Topic: 1988 Message: 1992

Art, You may or may not run into the problem I did. The 1.11 file would not install over the 1.10 until I removed all the "read only" attributes in Trusted QSL ver 1.10.....Kept getting errors. Just passing this along FYI.

1993. heads up: certificate #6 requires LotW approval

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-12 02:55:41 UTC
From: Dave Bernstein
Topic: 1993 Message: 1993

Last night, I fired up TQSLCert to create a new certificate that I would "sign" with my original AA6YQ certificate; I'd done this successfully in the past with four other certificates. I was surprised to receive the following message in response:

"Your additional certificate request, plus your existing certificates and/or other pending requests, exceeds the limit. Your request will be reviewed by Logbook of the World staff and you may be contacted prior to the granting of your certificate. Your certificate request processing is completed."

Perhaps this threshold is documented somewhere, but I was unaware. Response time in this case exceeds one business day. If you're in a similar situation, anticipate a delay.

73,

Dave, AA6YQ

Dave, Thanks for the info. I have not tried the 1.11 version yet but
will keep this info for when I do update.

1995. the New Large IRC's will expire in 2006

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-15 22:58:09 UTC
From: FireBrick
Topic: 1995 Message: 1995

I found this on the cluster.

BIG PROBLEM COMING SOON WITH THE 'NEW-TYPE' IRC's.....
AS YOU KNOW, DXers HAVE USED IRC's AS INTERNATIONAL QSL CURRENCY FOR
DECADES. THEN THE INTERNATIONAL POSTAL UNION BROUGHT OUT THE NEW,
LARGER TYPE IRC's IN 2000, THAT ARE DESIGNED TO HAVE A 'SELL-BY' DATE
ON THEM, SO THAT THEY BECOME WORTHLESS IF NOT REDEEMED IN SIX YEARS.
NOT GOOD NEWS FOR HAMS, AS MANY OF THE EXCELLENT OLD-TYPE IRC's HAD BEEN
IN CIRCULATION FOR OVER 30 YEARS WITHOUT PROBLEM. FROM 2000 WE WERE TOLD,
THEY WOULD BE ISSUED WITH A SIX-YEAR EXPIRY DATE.
OK, THAT WAS BAD NEWS BACK IN 2000.
BUT NOW IT'S 2005.
SO WHAT YEAR DO YOU RECKON THAT NEW SIX-YEAR IRC's BEING SOLD TODAY
SHOULD EXPIRE? (BET YOU THOUGHT IT WOULD BE 2011, DIDN'T YOU?)

NO SIR. THE BAD NEW IS, THAT ALL 'NEW' IRC'S EXPIRE IN 2006 !! ALL OF
THEM!
THAT MEANS THAT THE 'SIX-YEAR' COUPONS THAT YOU BUY TODAY WILL BECOME
WORTHLESS IN A MATTER OF MONTHS, AND ALL MONEY PAID WILL BE LOST UNLESS
THE IRC IS CASHED IMMEDIATELY BEFORE THE DEADLINE IN 2006.

AS FAR AS I CAN FIND OUT FROM POST OFFICES IN THE UK AT LEAST, ALL STOCKS
OF IRC's WERE PRINTED WITH THE SAME EXPIRY DATE - 2006.
I GUESS WE ALL THOUGHT THAT THE EXPIRY DATE WOULD TRACK THE DATE OF SALE,
ALWAYS MOVING FORWARD BY A MONTH AT A TIME. BUT NO, THE EXPIRY DATE HAS
REMAINED FIXED AT 2006 WHILST TIME HAS PASSED, MAKING THE 'SIX YEAR'
IRC's NOW ONLY ONE-YEAR IRC's.
IT APPEARS THAT WE'VE BEEN RIPPED-OFF. AND WORSE THAN THAT, THE VALUE OF
THE IRC AS AN 'INTERNATIONAL PROMISE OF VALUE' HAS BEEN BADLY ERODED.
WHAT ARE WE GOING TO USE IN FUTURE?
73 Paul G4XTA @ GB7SAN.#78.GBR.EU

It's only a hobby ... only a hobby ... only a hobby ... only

Well I agree with you on that Ford.

and just for grins, I do keep a web chart of the presently preferred choice or remuneration.
http://www.qsl.net/w9ol/ircchart.txt

At least I do when qsl.net is working.

I also manage a couple of stations and have put their logs onto LoTW.
I'm surprised to get as many mail requests as I do.

1999. DXCC Submission

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-25 03:47:44 UTC
From: w5ec
Topic: 1999 Message: 1999

I am making my March submission and see on the new application a box to check that says "Check for LOTW QSLs on the web".Then it says to authorize the use of LOTW qsls at ARRL website. Well, I have looked everywhere I can but I can't find anywhere to authorize the use. Any help?
While looking, I see that I should download the new software version and when I try to do it, I am directed to a mirror site selection page. I pick the USA site and have to enter an id and password which, naturally, does not work. Downloading a newer version should be easy. Any help here?
Thanks
Bill W5EC

2000. QSLs in LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-03-30 15:14:55 UTC
From: JV
Topic: 2000 Message: 2000

Hi Guys
Has the format for confirmed QSLs been changed In LoTW?
They use to be displayed with the the latest one on top. Now they
are all over the place. I can't determined which ones that have already
been put in DXBase without looking at each QSL. In the past I
could pick up on the last call sign and enter all new QSLs above
that call into DXBase, now I can't. Open for suggestions.
JV

From: FireBrick
Topic: 2000 Message: 2001

I don't see that here.
In the MyQSO's page, clicking on the Most Recent QSLs button retrieves qsl with the most recent at the top.

Recently some big contest stations have been re-uploading their logs which appears as if they were recent qsls.

Now if your using a more selective search and hitting the Submit button, you may have your search criteria improperly set.

But selecting a date range in the Download Report can give you a listing in .adi format of your most recent qsl's.

And finally, don't worry, download the report and import it into DXBase and then download the lotwimportqsl.rpt from Joe, WA6AXE, site and it will give you a printout of your qsls in what ever order you want.

2002. LOTW Conflict Feedback

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-02 16:10:18 UTC
From: Jerry K3BZ
Topic: 2002 Message: 2002

When I upload QSOs to LOTW with my logging program (DXKeeper/DXLab), part of the feedback I get is a process where conflicts between what's in LOTW from the other guys differs from what my log says. For example, Grid locations. You have to choose to keep what you have or accept what LOTW shows. So far, I have figured that what LOTW has is probably more correct, but lately I'm wondering. I'd be interested to hear how others deal with those differences.

73, Jerry K3BZ

2003. Re: LOTW Conflict Feedback

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-02 19:02:17 UTC
From: Dave Bernstein
Topic: 2002 Message: 2003

In my experience with mismatches, CQ and ITU zones are incorrect about 10% of the time. When wrong, they are usually reversed; you can quickly check using DXView's zone overlay maps. Gridsquares and IOTA tags are generally accurate. Early on, incorrect IOTA tag formats were a problem, but DXKeeper now recognizes these and only brings substantive mismatches to the user's attention.

By the way, DXKeeper doesn't force you to individually resolve conflicts; you have the option of automatically accepting the LotW data or automatically retaining the logged data.

2016. % of QSL to QSO

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-15 02:32:34 UTC
From: Frank Styron
Topic: 2012 Message: 2016

Interesting thread...

I have an overall LOTW confirmation of 14%. With 23 countries confirmed.
49 states worked with 44 LOTW confirmed - need UT, NV, AK, ND, WY,
RI(not worked),

My QSL rate by mode is:
SSB 15%
CW 15% (I thought this would be higher)
RTTY 40% (No surprise there)

Topic: 2006 Message: 2017

So, why do we do this thing if the returns(QSL's) are so low? What rates does everybody have for returns on hard-cards: bureau sent, and self sent? Has anyone been awarded DXCC on Lotw data alone?
Its definately cheaper than cards and easier. If everyone uploaded their logs the returns would go up -- I guess.

Yes, they would but that is not likely to happen unless it gets MUCH easier to use. It is great and easy if you are interested only in DX form ONE location and one call but if you go beyond that , or if you want to have other awards, forget it. Many people want other awards and they TILL have not been implemented. doubt they will ever be as it is going to cost too much to ARRL!

The problem is that you still have to use paper since only the one award is supported, so why bother?

From: Joe Subich, K4IK
Topic: 2006 Message: 2020

Gil write:

> Yes, they would but that is not likely to happen unless it gets
> MUCH easier to use.

"Easier to use" is a matter for the application developers and NOT ARRL. LotW is, in essence, a large QSO matching service. tQSL is a basic upload application to allow users to get started. When the developers of loggers and award tracking software get fully involved (some are), the ease of use will come.

> Many people want other awards and they TILL have not been
> implemented. doubt they will ever be as it is going to cost
> too much to ARRL!

ARRL have already announced that WAS and VUCC support are "in the works." However, this goes back to resources, development is, in essence, a small part of a much larger job for ONE programmer at ARRL.

> The problem is that you still have to use paper since only the
> one award is supported, so why bother?

There is a public API by which ANY award sponsor can make use of LotW credits. However, those sponsors (CQ, RSGB, etc.) need to step up to the plate and reach an agreement with ARRL to make use of LotW.

Yes, some contester up in NH has DXCC on LOTW alone, I believe, just recently announced. Adding WAS to LOTW will be a huge improvement and get a lot more people using it. ARRL is supposedly working on it now, subject to budget restrictions. Most of us know what that's like.

Topic: 2006 Message: 2028

Hello all

KC1XX has achieved 5BDXCC just using LoTW confirmations, and K3KO has about 230 different countries confirmed and also recently reached the 1000 band countries needed for an initial DXCC Challenge Award.

Several people have confirmed more than 80 countries on 160 with LoTW now.

We are migrating servers this week hence some of the trouble with log uploads.

Asunto: RE: [ARRL-LOTW] RE: Is the group still alive???

Hello all

KC1XX has achieved 5BDXCC just using LoTW confirmations, and K3KO has about 230 different countries confirmed and also recently reached the 1000 band countries needed for an initial DXCC Challenge Award.

Several people have confirmed more than 80 countries on 160 with LoTW now.

We are migrating servers this week hence some of the trouble with log uploads.

Yes, some contester up in NH has DXCC on LOTW alone, I believe, just recently announced.
Adding WAS to LOTW will be a huge improvement and get a lot more people using it. ARRL is supposedly working on it now, subject to budget restrictions. Most of us know what that's like.

So, why do we do this thing if the returns(QSL's) are so low? What rates
does everybody have for returns on hard-cards: bureau sent, and self sent?
Has anyone been awarded DXCC on Lotw data alone?
Its definately cheaper than cards and easier. If everyone uploaded their
logs the returns would go up -- I guess.

My cards are very nice, and a little expensive to produce (about $0.22 each)

If I mail a card direct, with an SASE (or IRC for DX), my response percentage is nearly 100%. (Cost per card returned around $1.25 melded average DX vs domestic)

If I mail a card direct with no return envelope or postage, my response percentage is around 25%. (Cost per card returned around $2.00)

If I bulk mail cards via the outgoing bureau my response percentage is about 1%. (Cost per card returned around $10.00)

If I bulk mail cards via the WF5E QSL service my response percentage is about 80% (Cost per card returned around $0.75)

If I bulk mail cards via LoTW my response percentage is about 11%. (Cost per card returned $0.00)

LotW was moved to a new server. This is transparent to access via a web browser, but depending upon how your logging software performs uploading, an update may be required.

There was a brief interval in which the LotW Query facility was rejecting parameters containing a space character, but this problem was expeditiously corrected.

If your interested in bypassing the login page and going directly to YOUR QSOS page you can put this shortcut on your desktop.

https://p1k.arrl.org/lotwuser/qsos?login=######&password=$$$$$$$

obviously you must change ###### to your userid and $$$$$$$$ to your password.

The trouble with ignorance is that it picks up confidence as it goes along.

From: rlb
Topic: 2040 Message: 2040

The following was on the LOTW web site:

Apr 18, 2005: User site log-in problems -- After migrating LoTW to a new server many people are having problems logging into the system. The problem is usually that the browser seems to have "forgotten" your password. One simply needs to re-enter the password that came in the body of the email with the latest .tq6 file attached. If a user cannot find or remember that password we can help at lotw-help@...

Because people with this problem won't see this message, we are placing it here to help spread the word. It also points up the pitfalls of relying on using the browser to remember passwords, so keep your passwords handy.

Topic: 2041 Message: 2041

I guess I am ready to download the newer LOTW file.
The file is supposed to be ver 1.11 if I read right
but only see the TQSL 111 on the site. Is that the
right one to download?

It also says to remove old pk12 file. Do you do that
before or after the download?

Any other hints or suggestions is greatly appreciated.
Step by step instructions if posible.

Thanks for any help.

I'm not sure what OS you're running, but that's the right file for
Windows, at least.
It's tqsl-111.exe for windows, TrustedQSL1.11-1.dmg for MacOS, and so
forth.

>It also says to remove old pk12 file. Do you do that
>before or after the download?

It says that Linux and Mac OSX users should re-save their certificates
as a .p12 file after upgrade. You do that after you install the new
version of TrustedQSL. You don't need to remove anything beforehand,
and you don't need to do anything if you're running Windows.

>Any other hints or suggestions is greatly appreciated.

There's been at least one person who had a problem because they
restored their TrustedQSL files off of a CD-R disk, which made them
read-only. The installer generated a bunch of errors. You might want to
look at those files to make sure they're not set read-only.

>Step by step instructions if posible.

If you let us know what operating system you're using it'll help with
giving directions.

If windows, just click on the download link, save it to your desktop,
then double-click the saved file to run the installer.

Here's the directions I sent Randy, in the chance they're helpful to
others.
73,
-Rick

This is for a machine running XP Service Pack 2. Some of the details
may not be right prior to SP2 or for systems not running XP, but they
should be pretty close.

First, check your files to see if they're read only:
Double-Click on "My Computer", then put "C:\Program Files\TrustedQSL"
(no quotes!)
into the "Address" bar. Then, use the "Edit/Select All" and
"File/Properties" menu
selections. The "Properties" window that comes up shouldn't have the
"Read Only" box
checked. If it does, click it off and say "OK". Select "Apply changes
to the selected items,
subfolders, and files" if it asks you. If it doesn't say "Read Only"
then just click OK.

Then, download TQSL 1.11. Go to http://www.arrl.org/lotw/#download and
go to the link under
"Windows" that reads "Download tqsl-111.exe V1.11 installer". Pick a
download location
near you, then click on the icon to the right that says "2282 kb".

If you're running XP Service Pack 2, you'll get a warning that Internet
Explorer blocked
the site from downloading, with a "Click here for options..". Click on
the warning and choose "Download File".

The download starts, with a "Do you want to run or save this file". I
click on "Save", then

choose "Desktop" from the "Save In" dialog, then click "Save".

When the download completes, it'll give you the option to Run the file. (The button labeled "Open" will start out grayed out during download, then change to "Run" unless you have the "Close this dialog box when download completes" selected.) Click on "Run", or double click the downloaded file on the desktop. That'll start the installer running.

The first question you'll get may be a security warning that the publisher could not be verified. Click "Run" to allow it to continue.

The next dialog box is the "Welcome to the TrustedQSL Setup Wizard". Click "Next".
You then get to choose where to install TrustedQSL. Assuming C:\Program Files\TrustedQSL, click "Next".

The next dialog box is about the shortcuts for TrustedQSL. The default of "TrustedQSL" is probably what you choose before; Click "Next".

The next dialog is for setting up a desktop shortcut. If you want one, check the "Create a desktop icon" and click "Next".

Next is the "Ready to Install" dialog that lists the options you choose earlier.
Once you verify that things are OK, click "Install".

You'll then get the "Completing the TrustedQSL Setup Wizard" dialog. Click "Finish" and you're done.

When you've done with the upgrade, it's a good idea to save your certificates as new .p12 files just to be sure.

Start/TrustedQSL/TQSLCert. Click on your callsign, then "Certificate/Save". Save the .p12 file off to a floppy and store it in a safe place - that way, you can recover your certs even if your system fails.

According to http://www.dx4win.com/features.htm , DX4Win has the ability to import an ADIF file.

I only scanned the web site, but saw nothing about synchronizing downloaded ADIF from LotW with an existing log. Thus, you should import the downloaded ADIF into an empty log and view that. Importing the downloaded ADIF into your current log would probably fill it with duplicates.

Actually, the recent version of DX4WIN (6.03) does have the ability to
sync with LoTW.
If you've got something older than that, Dave is quite correct.

For 6.03, DX4WIN keeps track of logfile entries that have been exported
for import into LoTW and allows importing of the confirmation flag from
LoTW. The export is pretty straightforward, but the import isn't
obvious. You import the ADIF file and select "Imported QSO sets Upload
Confirmed Flag" to merge just the confirmations from LoTW into your
log. Again, this is only there in 6.03.

Sorry for not replying earlier - I needed to check out the details of
the two operations and verify the version number of DX4WIN that added LoTW.

I forgot one significant detail: when using DX4WIN to export your log
for LoTW, you DO NOT use the "Import/Export" menu. You use the
"Labels/Export for LOTW" menu selection. A regular export won't set the
flag that keeps track of the uploaded QSO, and won't record an upload date.

From: rlb
Topic: 2047 Message: 2047

Are any of the rest of you having problems uploading
files?

I usually upload through my logging program but not
having any success so tried it directly at the web
site with still no success.

All other parts of LOTW work for me including QSL's
received, all results of past uploads so I know it is
not a password problem.

Upgraded to v1.11 last night and still no luck. Only
trying to load 4 calls. Tried again this AM, at
1015utc thinking maybe an overload at the site but
still no luck.

Any suggestions greatly appreciated!!!!!!

Call me dumb, or perhaps just impatient, but I find the LOTW process to be confsing and not particularly customer friendly (help files). Can someone save me having to read the ARRL's help files AGAIN (I did read once today) and give me the simple version of how to get a new certificate?

My old one expired 4-5 months ago. Do I have to go through the process like a brand new user , submit a request and wait for a code on a post card , or do I simply uses their little program and request a new certifcate that gets emailed to me ?

I am not impressed with ease of use or friendliness of LotW either but this one is fairly easy.

Go to the file menu of TQSL-Cert program and choose new certificate and follow the prompts. You will sign the request with the old certificate, that avoids the postcard junk. I am not sure if it will work if you certificate is expired. It certainly should. If not, the process sucks.

As far as I know, you have to go through the postcard crap only the first tie or if you totally lose your certificates.

See below. This is one of the things about the tQSL process that's very
confusing.
Hopefully the below step-by-step directions will help.

>My old one expired 4-5 months ago. Do I have to go through the process
>like a brand new user , submit a request and wait for a code on a post
>card , or do I simply uses their little program and request a new
>certifcate that gets emailed to me ?

No, you don't need to do that. You use the certificate you've already
received to validate the request for the renewal.

Here's what you do.
1. Start up TQSLCert (Start/TrustedQSL/TQSLCert usually starts this.
You may have a desktop icon you can click to run it.)
2. Select your callsign from the list displayed under "tQSL
Certificates" by clicking on it.
3. Click on the "Certificate" menu, then "Renew Certificate".
4. You'll see the "Generate Certificate Request" dialog. Click "Next".
5. Select the validity date for QSOs with that callsign. It is *very
important* to leave the end date blank unless this is a callsign you no
longer hold. Click "Next".
6. Fill in your current address and click "Next".
7. Make sure your e-mail address is still correct and click "Next".
8. Enter the password for your new certificate (twice) and click
"Finish". This is a brand new password, which doesn't have to match the
password on your old certificate.
9. You'll see a "Save Request" dialog now. Save the renewal request
somewhere that you can find it later; it's going to save it as a
"callsign.tq5" file by default.
10. You'll see an "Enter Password" dialog asking for the password to
unlock the private key. You enter the password on your *old*
certificate next, not necessarily the password you gave in step 8
above. Notice that the icon for the new request has a slashed bar over
it to indicate that the request isn't for a valid certificate.
11. Once done, you'll see submission directions. Either e-mail the .tq5
file to LoTW, or upload it at the web site.
12. To do the web site upload, log in to LoTW and click "Upload file".

13. Browse for the file saved in step 9 above, and click "Upload File".
You should see the status displayed:
Started processing your Renewal Certificate Request.
For call sign: K1MU
For DXCC Entity: UNITED STATES OF AMERICA (291)
For QSOs not before: 1997-12-02 00:00:00
For QSOs not after:
Your renewal certificate request is accepted and awaiting
further processing.
You will receive the certificate after it has been created.
Your certificate request processing is completed.
14. Once LoTW is done with checking your certificate request, you'll
get an e-mail back with an attachment that has a .tq6 file containing
the certificate signed by LoTW. This gets loaded into TQSLCert:
15. Save the attachment file from your e-mail somewhere.
16. Start TQSLCert as above, and pick "File", "Load Certificate File".
Make sure the button next to "TQSL (.tq6) certificate file" is selected
and click "Next".
17. Browse for the saved .tq6 file and click "Open".
18. You'll then see the status from loading the new certificate. The
icon in TrustedQSL should no longer have the red slash mark/circle over it.

2056. Expired Certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-21 22:39:08 UTC
From: greyowl92000
Topic: 2056 Message: 2056

One of my certificates expired while my computer was down due to hard drive failure. I reinstalled the LOTW software and everything works fine with my prime certificate. The certificate for my old call is now expired and I can find no way to update it. I thought that I could import the expired certificate and then update it but any attempt to do that fails and gives an error due to the expired certificate. Anybody got a clue where to go for here?

Another question: Once all of the QSO's are uploaded that will ever be on a particular certificate is it still necessary to keep the certificate alive in order to keep getting credits or is the certificates only function to upload QSO's? The old call in this case is a secondary cert under my present call's cert.

Tnx fer any help, Trav, WX0Y

2057. RE: [ARRL-LOTW] Expired Certificate

From: rojomn
Topic: 2056 Message: 2057

An expired certificate is useless forever and cannot be updated. Another ridiculous design in my opinion. It is not all bad though. You must get a new certificate and you can do it form the TQSL Certificate file menu new certificate. Is not hard.

All of these questions about how to do these things are glaring proof that the whole design is too complex to ever make this system into a general use system. It won't happen the way it is now, especially since it supports ONLY DXCC.

2058. Re: Programatically uploading

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-22 02:01:05 UTC
From: Dave Bernstein
Topic: 2055 Message: 2058

If by "uploading transparently", you mean automatically signing, encrypting, and transferring each QSO as it is logged (as DXKeeper does with eQSL.cc, for example), I don't believe the LotW infrastructure is designed to handle large numbers of single-QSO transactions. I have implemented a "two-click" upload in DXKeeper: the first click assembles a batch of QSOs not yet uploaded, and the second click signs, encrypts, and transfers this batch, conveying LotW's acceptance to the user. If this is of interest, I'm happy to share my experience in getting this to work.

2059. simple log entry ? for someone with 20k or more paper log?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-22 15:20:42 UTC
From: Gordon LaPoint
Topic: 2059 Message: 2059

I'm asking this for a friend, who has 20+ logbooks filled (paper) What is a simple logging program to use to get this into a format that can be uploaded to LOTW?
I use logger32 , which is way more that needed to just convert paper logs, and is hard to use for that purpose, the changing of date/time info is hard to use for that many contacts.

Thanks!!

The DXLABS suite (using the DXKeeper program) would do this well. The hard part is entering the data. If the data is more than a couple of years old it is probably a useless exercise for the return. You will enter 100 QSO or more for every return.

Gord,

Can't get much simpler than L32 for manual input. Just Ctrl-M and away you go. It remembers last input data so only need to make changes. Not all field need to be populated, only those that are needed (date, time, band, mode, call. RST will default to 59/599). Check the LoTW QSL box and the output will be ready to export for ARRL. The other benefit is that there will now be an L32 log.

The other way is to create an ADIF file using the LoTW TQSL CERT tool. Just select, Create New ADIF File and fill in the blanks, certify and send to LoTW. One could then import this into any logging program.

I entered my logs from KG6AQI (1965-1969), and got a surprising number of returns, considering that the last QSO on the call was 35 years ago.

On the other hand, I have relatively few returns from my AD8I logs (mostly contest logs) from 25 to 30 years ago. Returns on the last five years are running 19% while the old QSOs are returning less than 0.5%.

73,

To all,
Thanks for all the help and suggestions. I did not know about the
Ctrl-M in Logger32, and have used it for years, but never entered old
data with it!!

Will have Tom try logger32 and see how it goes.

Was that GUAM at the time? You would get more if you are a somewhat rare entity but I meant for us Midwest common folk :-)
By the way, we worked June 26 , 1969 20M SSB and it was GUAM. The log does not match as a qsl though and my confirmation is with a KH2. Another problem with old QSOes on LotW :-)

Yes. It was Guam then. Now it's a ham in California.

Currently entering Q's for 1967. Eventually you'll get a match, presuming
you're in my paper log in 1969.

Just checked the paper log. No K0MN, but I show a roundtable QSO on that date on 14225KC (before we had hurts) with W0RYM (Gil, Rochester), W8KVT (Ted, Dearborn) and W8SY (Norm, Detroit). Presuming your W0RYM logs are in LoTW, you'll eventually see a match.

It is W0MN but you are correct, it was W0RYM at that time. Your log matches mine and it is in LotW. I have had W0MN, W0RYM and AC0RYM during the Bicentennial. I did some operation from Alaska and some from Arkansas. I also had a few form Korea in 1959, thankfully no war at that time ! I ran AB4CF (Army Mars) for a while.

If you un-check DXKeeper's "optimize for realtime logging" box, it defaults a newly-entered QSO's start date/time to the previously-entered QSO's end date/time plus 1 second; there are shortcut keys for incrementing the start date/time byhours, minutes, or seconds. If you log a QSO without specifying its end date/time, the end date/time is automatically set to the start date/time. Whether that's enough automation for your friend is obviously subjective; DXKeeper is free, so its easy enough to find out. www.qsl.net/dxlab .

I'm asking this for a friend, who has 20+ logbooks filled (paper) What is a simple logging program to use to get this into a format that can be uploaded to LOTW?
I use logger32 , which is way more that needed to just convert paper logs, and is hard to use for that purpose, the changing of date/time info is hard to use for that many contacts.

Thanks!!

2071. RE: [ARRL-LOTW] simple log entry ? for someone with 20k or more paper log?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-04-23 05:39:05 UTC
From: Clark L. Stewart
Topic: 2059 Message: 2071

Here is one other solution for entering old paper logs into an ADIF format acceptable for LoTW.

==========

I recently completed an Excel spreadsheet to quickly convert paper logs into ADIF format for easy uploading to LoTW or for importing into regular logging programs. There are similar programs around but my focus was to make this as fast as possible.

After the first QSO is entered, the spreadsheet will automatically enter the same Date, Band and Mode for the next QSO so you don't have to type that for each QSO. It will auto-complete the Time field with leading zeros so you can just type a "1" and it will log the time as "0001".

Since only the Band is important for LoTW, you need only type in the whole number of the frequency (e.g. "28" instead of "28.562"). And, you can just type in a "c" or "s" for CW or SSB or a "1" or "3" for A1a or A3a Modes. Or, you can type in any Mode that is accepted by LoTW.

Using this program I can enter paper logs six to eight times faster than by using a regular logging program. Especially when you make several contacts on the same Date, Band and Mode the entries go very fast.

Once you have entered the data, (maximum of 100 QSO's per run) the program will create an ADIF file that you can immediately upload to LoTW or import into a logging program. Or, you can combine it with other ADIF files in a word processor and upload the combined file all at once.

I have posted a description of this program on my web site along with a ZIP file containing the spreadsheet program and a Microsoft Word document with the full instructions. Basic instructions are in the spreadsheet as well.

Here is the link:

<http://www.w8tn.com/software.htm>

This spreadsheet was created with Microsoft Excel 97 so you will need a version of Excel that is no older than that. Also, you will need a program that can read .DOC files from Microsoft Word to read the full instructions.

If you find this program useful I would appreciate hearing about it. Otherwise, there is no charge, it is Freeware.

I have a similar Excel spreadsheet that I created for entering old
contest logs. It will handle a couple thousand entries at a time
as well as allowing entry of the contest exchange plus DXCC country
(important if you are going to import "old" calls to a "modern"
computer logging program).

Like Clark's program one needs to enter mode/band/date only when
they change and one only needs to enter changes in time (e.g., the
minute digit from xx:00 - xx:09).

I have not taken the time to write any documentation but I will
e-mail a copy of the spreadsheet to anyone who would like it.

Hi Dave -
Thanks for the response. I sent you an e-mail off-list, but in case
you didn't get it, no I don't want to do single Q's, but rather sign a
.adif file, then upload the .tq8.

When calling tqsl.exe from a dos box, it works fine, but when I call
it programatically, it tells me the .adif file can't be found.

I've read the cited RFC, and find it not to hold a lot of meaning for me.

Sorry, Mike, I did not receive your off-list email.

I've had no difficulty with command line invocation of TQSL. If its complaining about not finding the ADIF file, I'd be looking hard at the pathname. Feel free to send me the relevant code fragment, and I'll take a look.

If you want to automatically upload the signed .tq8 file to LotW, you will have to implement the client side of that RFC. In what language are you programming?

73,

Dave, AA6YQ

Use my report form at http://www.rickmurphy.net/lotwquery.htm to do this.
Enter your LoTW username and password. You may want to check off the
"Location Data" and "Owner callsign" buttons. Then, click submit.
That'll send a request to the LoTW site to download an ADIF file from
LoTW with all of your QSO records.

What this does is submit a query like:
<https://www.arrl.org/lotwuser/lotwreport.adi?qso_query=1&login=CALLSIGN&password=PASSWORD
&qso_qsl=no&qso_detail=yes&qso_withown=yes>

You could set up a bookmark with that URL (filling in the CALLSIGN and
PASSWORD, of course) and query LoTW directly.

I don't know why there's no simple report item on the LoTW site for
downloading everything like there is for downloading confirmations.
Seems it would be useful.

Hi,

Seems to me that the problem with the ADIF download from LoTW is that is does not contain the Country number. This means that if, as requested below, you download all the QSOs you have uploaded (thousands), then you decide to import this into your logging program, you are forever going to be asked to confirm the country for all those non-unique prefixes. Some you will remember, but some special calls can be one of quite a gaggle e.g. GBxxxx which produces a choice of 7 DXCC entities!

Certainly, my logging program (and presumably all others) uploads the Country number, pity LoTW doesn't reciprocate.

Having said all that, could Rick's wee report form be modified to include the country number - or did I miss a trick somewhere?

I've looked around and don't see a way to do that for all records.
The LoTW report specification says that it'll only include the DXCC
entity number in the ADIF export file if the QSO is confirmed.
Moreover, you can't query for QSOs in a particular entity - you can
only select those for records where there's a QSL. The same is true for
the sone numbers, IOTA number, gridsquare, and QTH info - it's only
available for confirmed contacts.

I can understand the rationale here - you upload a callsign, date, and
time. It's not until it's confirmed by a station that says "I was in
entity foo" that the system knows for sure where the station is located.

I use DX4WIN; it's able to get the country right for downloads because
the callsign exceptions are stored in a separate database from the
logbook.

Sorry, guess you're not going to get the entity info.

Ivan -
I agree . I'm amazed at the number of contest and general logging
programs that do not export the country number. That is the greatest
strength of the ADIF format, and one of (IMHO) the chief reasons for
it's invention.

2081. Some yearly and quarterly LoTW results

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-01 20:22:14 UTC
From: FireBrick
Topic: 2081 Message: 2081

I've been pretty lucky, dxcc on a couple of modes.
And over all, about 60 band/mode qsl's I'd been unable to obtain via postal means.
Thanks to all.

Topic: 2056 Message: 2082

Tnx for help - I applied for new certificate on the expired call and the certificate now showa that it has been renewed. Can't figure how that happened but I will take it!

Topic: 2084 Message: 2084

Hi'

What is the correct data to post into the SAT, MODE, and SUBMODE fields for a contact via the ISS using APRS? I'm receiving error messages back from LOTW saying that APRS is not a correct submode for these contacts.

Thanks in advance

2085. WAS When????

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-05 19:42:41 UTC
From: Beischel
Topic: 2085 Message: 2085

O.K., we're coming up on two years since LOTW was rolled out. When are we going to get support for WAS awards? Geez, I would have thought the DXCC part would be a harder implementation and it does not seem worth it because from what I can see, there are very few DX stations using the system. Most users appear to be US which means a WAS award implementation would be a real benefit.

2086. CQ DX Marathon & LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-06 13:57:01 UTC
From: Les Rayburn
Topic: 2086 Message: 2086

The article announcing the CQ DX Marathon makes it
pretty clear that CQ Magazine is in talks with the ARRL
about using LoTW for that award (if it can be implemented
before Jan. 1, 2006)

So perhaps the league will get off it's duff and overall the
system to include both WAS and CQ awards. I know that
resources are limited, but it appears that the league only
started LoTW to prevent e-qsl and other services from
leaving them behind.

If they don't intend to put the necessary resources behind it,
then they should let the private sector handle it, and just
certify the systems (like e-qsl) so that they can be
accepted for ARRL awards.

Other than RTTY and digital ops, DX usage of LoTW
is minimal...and WAS credit would certainly help that.

I read the write up for the new CQ DX Awards.
First, I commend CQ for their initiative in trying to promote
increased DX activity.

Second, I doubt that the ARRL & LoTW is capable of responding
by the 1/1/06 start time.
This is MY guess based on past LoTW performance !!!

>So perhaps the league will get off it's duff and overall the
>system to include both WAS and CQ awards. I know that
>resources are limited, but it appears that the league only
>started LoTW to prevent e-qsl and other services from
>leaving them behind.

Don't forget the ARRL WAC Award. That should be the easiest to
implement.

After DXCC and WAC, you start running into problems with missing
"Station Data" like missing Grid and CQ Zone that will be needed
for the "CQ DX Field Award" and the "CQ DX Marathon Award" !!!

Currently I'M getting a missing data rate of: Grid 14.5%, ITUZ 21.7%
and CQZ 14.2% !!! Everyone has THAT data, but a lot didn't bother to
include it in their TQSL Setup.

I think LoTW is going to have a lot more problems with Non-ARRL
Awards than they think. Like Cancer, if you ignore the warning signs
long enough you end up 6 feet under.

>If they don't intend to put the necessary resources behind it,
>then they should let the private sector handle it, and just
>certify the systems (like e-qsl) so that they can be
>accepted for ARRL awards.

That seems like a reasonable approach. Seeing that the ARRL only
represents about 20% of the U.S. Hams, maybe another organization,
not ARRL or eQSL, could put the whole show together in some form
acceptable to both the ARRL and the rest of the WORLD Awards.

The ARRL currently seems to be suffering form "Not Invented Here"
and "The Dog in the Manger" syndrome.

Maybe it could also be said that LoTW suffers "Extreme Constipation",
that is they don't seem to be able to get anything out !!!

>
>
>Other than RTTY and digital ops, DX usage of LoTW

2091. Re: CQ DX Marathon & LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-07 07:31:28 UTC
From: Dennis
Topic: 2086 Message: 2091

Ummm, why would LoTW need to support the DX Marathon? Rule 6 states that QSL's are not required. In reading the rules, it appears that the only way to submit is electronically via a "downloadable entry matrix" which I don't think is available yet. Any support for automating this should lie with the logging program developers I would think.

I could see native LoTW support for the CQ DX Field award, but as of right now, you CAN use LoTW data for this award:
---
14. Participants in the ARRL Logbook of The World (LoTW) program may use a screen printout instead of cards to claim credit for fields represented by single-field entities. A copy of the LoTW printout must be sent to the Award Manager with the application. This printout will be retained by the Award Manager for future reference. Please list fields, in alphabetical order AA-RR, that are represented by LoTW credits and each call on your CQ DX Field Award application.

Perhaps the notion of how LoTW will be used to support non-ARRL awards needs to be addressed. From a pure business standpoint, the ARRL should not have to subsidize another group or organizations award requirement verification. What LoTW provides is a secure database of confirmed QSO's that should be able to be used for any award. The problem is to determine how others can access that information to verify the QSO's. With ARRL awards, there is no problem, but with other awards how do you provide secure verification? IMHO a good solution would be for the ARRL to provide - at nominal cost - a "certified" printout of verified LoTW QSO's. Think of your logging program and you do a SQL sort to produce a log extract, i.e. 20m CW QSO's. For example, you log into the LoTW system and navigate to a "Award Support Screen" and select the applicable award you wish to apply for. Click a button to confirm you want that certified extract and the "cost" could be deducted from your LoTW account. Then a extract is printed out, certified by whatever method the ARRL proscribes and then it is mailed to you. Once you get it, submit it with your award application instead of the traditional QSL cards. This should not be to daunting of a programming task. Note to LoTW Staff: for this service don't charge per QSO, just a flat fee of a buck or two to cover the costs.

As far as tracking other non ARRL awards, c'mon - if we are uploading to LoTW then we are all using some form of logging program that more than likely tracks all of this stuff for us - and if not, maybe it is time to move to another program! But I do think that LoTW should have native tracking for DXCC (which it does), WAS and VUCC. WAC is

technically a IARU award that can be issued by any IARU member society, the ARRL just happens to the the issuing authority for U.S. (or others without a national society) - so honestly, I don't see the need for LoTW to track it.

From: nf4lham
Topic: 2092 Message: 2092

Hi group -
Anyone know how to get in touch with a programmer on the LoTW team?
I'd like to know if the station location is accessible programatically.
The e-mail address on the site seems to be for problems with LoTW.
Thanks
Mike NF4L

2093. Re: Programming for LoTW

LotW developers monitor this reflector, and will also respond to
messages sent to LotW email.

Yes, station location information is programmatically accessible via
the TQSL library, which is available via
http://sourceforge.net/projects/trustedqsl/ . You might also want to
look at http://sourceforge.net/projects/trustedqsl/ for context.

Hi again Dave -
Thanks for the tip. I'll take a look there, and maybe one of the guys
will contact me.

2097. My LoTW goodies

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-19 11:08:50 UTC
From: FireBrick
Topic: 2097 Message: 2097

Here is a list of the all time new band/mode qsl's I received DXCC/Challenge credit via LoTW.
In many of these entity/band/mode qso's, I've worked multiple stations with no success in obtaining the needed confirmations.
But these good people did confirm via LoTW.

Some of these band/mode confirmations I have spent a bit of time/money on trying to obtain via managers, bureau, direct etc.

Most of these were credited to my Challenge totals.

Dream Total= All entities, on all HF bands, on all 3 modes, cw, ssb, digital.
Present total= 5182 worked, 4965 confirmed.

one of these should be good on your screen.
http://mywebpages.comcast.net/w9ol/reports/w9ol_alltimenewband-mode.doc

http://mywebpages.comcast.net/w9ol/reports/w9ol_alltimenewband-mode.rtf

http://mywebpages.comcast.net/w9ol/reports/w9ol_alltimenewband-mode.txt

http://mywebpages.comcast.net/w9ol/reports/w9ol_default.htm

(please let me know which of these file types looked best on your screen)

All reports created with DXBase2006 using WA6AXE created reports.
If your a data junky like me, than DXBase2006 will sate your appetite.

Leo I had a very similiar problem when I lost my hard drive. I had failed to keep a back up copy of my new certificate. Had the old one on a CD and boy did I get it messed up. I also had failed to keep a copy of the postcard password. Thankfully the ARRL helped me clean it all up but everything I did just messed it up more.

Thanks to the ARRL it is now up and running again.... My suggestion to you is to talk with them as they will help you out in a big way.

The computer that I am using is messed up and I am going to have to format the hard drive and wanted to know how to handle the LOTW programs TQSL and TQSLCert. I have been using DXKeeper to upload and download the LOTW information for the log. I am not sure what to save where I can put things back as they are. Any help would be great.

Art,

Save your current certificates as *.p12 files
(use the certificate | save option in tQSLcert).

After you have wiped the disk and reinstalled Windows, install
the current version of tQSL (1.11).

After installing tQSL, run tQSLCert and use File | Load Certificate
File to reload the certificates (*.p12) files you created in the
beginning.

You will need to run tQSL to manually recreate your "locations"
(Station | Add Location).

Good advice but I have to think there is an easy way to save the locations too. I don't think they are encrypted and probably saving the directory that has the tqsl would do it? I don't know but there must be a way, or at least there ought to be!

You're right, there ought to be a way to export this.

The location data is in the TrustedQSL data folder; on my machine it's in
C:\Documents and Settings\rmurphy\Application Data\TrustedQSL\station_data
(where 'rmurphy' is my username, of course. This is on Windows XP).
You could probably save this file and restore it to your new hard drive.
Actually, I'd backup the certs as recommended earlier, then backup them
with the entire TrustedQSL data folder onto a floppy or jump drive.
After reformatting, reinstall TrustedQSL then restore the data
directory and you'll probably have everything back in place.
I'm not willing to be the guinea pig on this, though. :-)

If you back up your data onto a CD-R, remember to mark the files as not
"Read Only" after restoring them, otherwise you'll have problems later.

You might also fire up the DXLab Launcher; it can save your DXKeeper
setup to a file, which you can restore after re-installing everything.

You are correct ... you can backup the "Station_Data" file.
However, since the "Application Data" directory is normally a
hidden/system directory on "normal" WindowsXP/Win2K systems
it is something beyond a "safe" recommendation.

TrustedQSL should have a means of saving/restoring the station
location data in any case. It's a "hole" in the design of the
software.

Actually hidden files are an obscenity in the design of windows in my
opinion! The default ought to be visible and so shod the file suffixes.
Making both hidden is an abomination that causes more harm than good.

I don't think there's anything "unsafe" about backing up that one file
and restoring it to the new system. It's a simple XML-format text file,
after all.

2112. Do LOTW credits count in the 120-card limit?

Yahoo group: ARRL-LOTW (2003 — 2007)

I'm about to create another hybrid application, and I'm trying to figure
out how the LOTW credits figure into the 120-card limit. The usual $10
application fee covers submission of 120 'cards'. I presume that LOTW
credits don't count in this? E.g., on this current hybrid application,
I can have 120 cards checked at the upcoming hamfest, and also add LOTW
credits on top of that?

My current general purpose (NON-CONTEST) logging software (HyperLog) is no longer supported, so I am looking for a replacement.

Following are my requirements.

MUST HAVE
--Intel/MS platform (Win, DOS, whatever)
--Radio aware
--Keyboard-centric (no mouse for routine logging)
--Callbook CD aware
--Import/Export ADIF
--LoTW integration
--Award tracking (DXCC, WAZ, etc)
--Print QSL report labels
--Impecable track record of author support

Nominations please. (Price not important)

Very dangerous topic, Hans :) My choice is Logger32. It matches all your needs except printing labels, because there are couple of professional label printing applications L32 can export label print data to. It is free.

Hans,

Try the DXLab Suite ... its author happens to be around here as well
as his own support forum. I believe there are enough "hot keys" built
into the program that you would be comfortable with it in "keyboard-
centric" mode after the learning curve. For further information
(and to download the various modules - it's free) see: www.qsl.net/dxlab.

1) Windows based
2) full ADIF import/export
3) built-in LotW integration (bidirectional)
4) top notch Award tracking (DXCC, WAZ, VUCC, IOTA, Challenge, etc.)
5) Prints QSL cards or QSL labels
6) Outstanding author and peer support via:
http://groups.yahoo.com/group/dxlab
7) multiple radio support (Icom, Yaesu, Kenwood, Elecraft, TenTec)
8) Support for CW via software generation (serial port DTR or WinKey)
9) Support for RTTY (MMTTY engine) and PSK31/63 (PSKCORE.DLL)
10) DXCluster interface - send/receive spots including multiple
telnet connections, RF connection and IRC.

73,

... Joe, K4IK

2120. Re: [ARRL-LOTW] Do LOTW credits count in the 120-card limit?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-05-24 18:43:42 UTC
From: C.M. Christensen
Topic: 2112 Message: 2120

Hi Ben,

Actually the 120 count refers to QSO's, not cards, so make certain you count the correct items. You can have the card checker check 120 QSO's (for the ten dollar fee) and then add any number of LoTW credits to that for which will you be charged an additional per QSO LoTW charge. How much you are charged for them will depend on the price you paid when you bought the LoTW credits. Recall that you have to purchase the credits up front and then ARRL subtracts the credits when you submit via LoTW.

One nice thing about the dual application is the speed. The last one I sent in had a total of 139 combined qso's done by a card checker and LoTW and I had everything back from ARRL in two weeks. No cards had to be mailed.

Got my Novice license in the mail August 9th, 1967.
Operated as WN9VOL till May 8th, 1968.

Working mostly 15 and 40 meters.
Made 1400 qso's.

I'd sure like to get one of those qso's as a LoTW qsl.
Won't mean anything, won't count for anything.
Not even sure why I'd like to get it other than for the novelty.

So If your looking through your old log books for that time frame;
take a quick look for my call.
I'd appreciate it.

Please and thank you.

Light travels faster than sound. This is why some people appear bright until you hear them speak.

Rick -
I agree backing up/restoring that file would be safe. AFAICT there's nothing special about the hidden directories.

I'm curious about it's location on 98 machines. It's been too long since I had one. Does anyone know? Would it be reasonably safe to assume (yeh, I know) the location to be defined as "current user/app data"? Or it that a construct of only NT type systems?

Wonder what would be the result of 2 hams, 1 computer, same computer login? Actually I don't log on (overtly) to any of my 3 Windows XP machines.

What I'm after is a way to read the location(s) to pass as a command line parameter to tqsl for creating the .tq8 file for uploading.

While the TQSL source code is available, it's almost impossible for anyone without a Linux box to unpack (right Dave?).

I don't know about that ("nothing special about the hidden directories") in general, but for this specific case backing up and restoring that file appears to be safe. I tried that and it appeared to work. I didn't suggest backing up the certificates that are also in that directory tree as I hadn't tried that. It appears that restoring that entire directory tree moves the certificates and other TQSL data and it all fits on a single floppy for me.

For Windows '98 the files go into C:\Windows\Application Data\TrustedQSL.

You'll have one certificate and location database. With different callsigns you should still be OK, but I think it'd be confusing.

The source .tar.gz file can be opened using WinZIP.

I didn't have any trouble unpacking TQSL on a windows box -- there are zip archives available.

TQSLLib provides access to the information you seek; use the new version that can be invoked via VB.

Rick -
I agree backing up/restoring that file would be safe. AFAICT there's nothing special about the hidden directories.

I'm curious about it's location on 98 machines. It's been too long since I had one. Does anyone know? Would it be reasonably safe to assume (yeh, I know) the location to be defined as "current user/app data"? Or it that a construct of only NT type systems?

Wonder what would be the result of 2 hams, 1 computer, same computer login? Actually I don't log on (overtly) to any of my 3 Windows XP machines.

What I'm after is a way to read the location(s) to pass as a command line parameter to tqsl for creating the .tq8 file for uploading.

While the TQSL source code is available, it's almost impossible for anyone without a Linux box to unpack (right Dave?).

Rick -
Thanks for the info. I'd downloaded the .rpm. I'll get the tar. Sure
would have been nice to have the path to the file in the registry like
the exe. And have the password as a command line parm. I guess if it
were easy, we wouldn't get the big bux. Wait.... I'm not getting paid.

Dave -
I got the tar unpacked. Now if I can remember enough C.......

What do you mean by "new version that can be invoked via VB." Is there
a different interface other than calling a method in a dll? I did get
the doc, and have been wading thru it.

Earlier versions of TQSLLib could not be invoked from VB. The most recent version of TQSLLib can be so invoked.

Dave -
If a user has an older version, and the functions were not exported, this isn't going to work. All I can do is warn MY users to get the latest. AFAICT there is only V2 on SourceForge. I'm using Delphi, not VB. I'm trying to dope out which function(s) need to be called, and translate the parms from C to Delphi. It's been a long time since I did C++.

2135. LoTW trend is improving

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-06-02 11:22:03 UTC
From: FireBrick
Topic: 2135 Message: 2135

I'm sure others have noticed the recent increase of LoTW use, especially among contest and non-USA stations.

http://mywebpages.comcast.net/w9ol/reports/w9ol_total_stats.htm

I did find it interesting that WARC band qso's resulted in a lower qsl response.

Your mileage may vary.

2136. LOTW Submission to DXCC

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-06-03 16:09:37 UTC
From: Jerry K3BZ
Topic: 2136 Message: 2136

I recently applied on the LOTW website to have my LOTW credits put into my DXCC total. There were 95 LOTW QSOs. I printed out a copy of the LOTW application.

My initial DXCC account was under my previous callsign K1MER. My previous callsign and my current callsign are joined in my LOTW and DXCC accounts, so QSOs for all callsigns are counted in my status.

Why does the application indicate it's for my previous callsign?

DXCC has to do a review of my application before they "accept" it and "verify" the QSOs. What should I receive to indicate that DXCC has "accepted/verified" all 95 QSOs in my application?

Why is this disappointing? More people own Fords than Mercedes. Does this mean Fords are better? No, it means Fords are more popular.

eQSL is easier to use and less secure than LOTW, so obviously, there's a good chance you'll get more hits per QSO on eQSL than LOTW. If you want a high QSL/QSO ratio, eQSL is probably better for you, but if you're looking to get QSL hits that count for the DXC program, you'll need to use LOTW.

I have almost a 13% QSO/QSO ratio on LOTW, and I'm pretty happy with that.

Chuck,
It is a hobby, but some people like to cheat to get awards, which
makes those who don't cheat unhappy. LOTW's security helps keep
cheating out of the equation.

This might not matter to you, but it does matter quite a bit to those
people who worked very hard to get DXCC/5BDXCC/Honor Roll.

Pretty good analogy Scott.

I was reminded of the craze back in the last century of collecting beer cans.
People went out and collected lots of different brand/style of beers cans.
Almost all were empty.

But there were a group who only collected beer cans that were full.
I'm betting the empty beer cans are now in the trash, while many of those FULL cans are still in on display.

From: Chuck Layton
Topic: 2143 Message: 2143

What is the point of making it harder than paper QSLs or more secure than Paper QSLs. Your award earned using only LOTW looks just like the one issued on only paper QSLs so it is no better. It is not like the difference between ford or chevy. It is the exact same model and color. No different. And it can still be cheated by people who want to get their award that way. Therefore that still doesn't answer the question of why the national security level for a hobby. It can be beat just as easy as paper QSLs by people who want to cheapen THEIR award. Because Station XZY cheated to get his WAS doesn't make mine any less valuable because I didn't. All it really does is discourages people who are not that computer litterate in first place from using it.

Chuck, if you find LoTW too difficult to use, blame the author of your
logging software for not integrating it better.

Public key encryption is hardly only for "national security"!

What is SO hard about LOTW???

I make two clicks, put in my password, two more clicks and my QSOs are uploaded and checked in my log. Maybe 30 seconds. Less for downloads into my log.

Carl,

I agree that this a pretty simple tool to operate. It does take a bit of work to set up and I find quite a few folks that I've helped have trouble understanding the rather wordy instructions. A simple point by point would help.

To save all that labor of extra clicking and inputting your password make a WEB link as follows:

https://p1k.arrl.org/lotwuser/qsos?login=xxxx(your user name)&password=yyyy(your password)

Maybe I'm spoiled, but I have not seen any new QSL's
for a couple of weeks now. Generally, I can check in
every couple of days and see the QSL count increase by
a few - probably about 200 in the past year. Might
just be no uploads with my call sign, but thought I'd
mention it.

I dont' have trouble using it. My point on it is maybe we would see more participation if it wasn't so hard to get started in the first place. There are a lot of hams out there that don't know that much about basic security on computers and see it as a lot of work. I'm sure levels will increase but I was disappointed that even after waiting as long as I did I still only had 21 confirmed contacts out of 18 years of being a ham. A friend of mine refuses to even get help with it cause he has trouble using his computer to do more than use MSN or YAHOO messenger and getting his e-mail.

What you describe as your friend is more often than not a description of the general population. I am an accountant and work with hundreds of individuals--many of whom are self-employed professionals and hardly 'idiots' by any standard. More often than not, people are able to get basic functionality out of a home computer, but beyond that, they are clueless. Write a memo, hit print. Press the little letter icon, get email. Double click on the IE icon, get yahoo/altavista/google or whatever. Ask them to dig into the bowels of the software controls and you get a terrified glare in return.

I run out of fingers and toes counting the people I know that have a computer, but it simply doesn't work. Virus infestations. Software snaffus. Painfully old equipment. Many invested in the computer foolishly thinking they didn't need to also invest in some software to gain basic functionality. Lots of excuses. But the bottom line is the general population is basically computer illiterate. I'm certain the ham population follows the trend.

Until the population grows up, or operating systems become more friendly, or motivation causes people to focus on their computer, instead of the idiot TV, the trend will not change. I suspect the next generation we will see a difference.

I was surprised to get confirmed country though. I worked HC8N back in 2002 and when I uploaded the QSO info I got a confirmed contact out of that. One of 22 that I now have. I wish I had all my logs from the years gone by. I bet I could have a lot more contacts confirmed. It is much easier to get an ARRL award this way than to have to send in cards and send postage to get them back and all the other stuff you have to do to get the award. I have not even gotten close to getting anything but I need to spend a lot more time on the radio and with 10 meters and 15 being dead or so much noise that I think is coming from a transformer I don't enjoy it much. I do spend lots of time on the 40 meter band from time to time.

I agree with your assessment of the general population, Ford, but I'm not so certain about hams. I think most of us are a few steps beyond the average computer user, at least to the same extent that as individuals we can understand and operate the radio gear. There's beginners and experts and a lot in between, of course, both in using radio gear and computers. Look at the hamfests.... at least here in the East....many are now called hamfests AND computerfests.... the two seem to go together.

I think there's a significant number of longtime hams that are older and less inclined to embrace the computer for one cultural reason or another, but that group is diminishing due to attrition.... although the resistance of some is being worn down by growing ease of computer use and improved software friendliness.

But taken as a group, my impression is that hams are far more computer literate percentagewise than the general population.

Of course, you are thinking about your friends and acquaintances here in the US. I would agree. But what about 3rd world countries, which are missing from my list of confirmations. What about them?

I just got back from VK / ZL a few weeks ago. Sure, lots of people are connected in major population centers. But what about Zimbabwe? Greece? Turkey? The Sudan? Egypt? Just about everywhere in the South Pacific. I need my Qs confirmed from a bunch of places. With 25000 DX in my log, you would think I could get past the 60 country mark--all bands--mixed modes. There is a huge part of this world that is not connected. And THAT is the world I need confirms from.

I can't see how complexity of LoTW contributes to your hit rate from
those countries though.

Ford,

Take Greece off your list. Fastest LOTW reply I
received was from Greece. With in 20 min of working
it I received a confirmation last year. I know you
were just being general in your statement and you are
absolutely correct. What we also fail to think about
is the type of computer equipment many of these
countries have. Much of it hand me downs with slow
modems and processors. Also much more expensive to
connect as compared to their wages.

One thing I have not seen is any offers as QSL
managers to convert logs to LOTW. Has anyone seen
this or is this impossible under ARRL rules to do?
Maybe this would take too much time and commitment on
a managers part.

ALL of the stations I manage have up-to-date LoTW logs.
I'm also helping other managers with the MASSIVE job of onlining (is there such a word?) their logs.

Hello Ford,

Thursday, June 16, 2005 Ford Peterson wrote to ARRL-LOTW@yahoogroups.com:

FP> There is a huge part of this world that is not connected. And THAT
FP> is the world I need confirms from.

THAT world all have managers (except Greece, which is a European
country).

From my point of view, if we want to blame someone, blame their hunger
for greenstamps, which number the LoTW would significally decrease.

If any of my Stations are 'signed up' to LoTW - as two of them are at the moment. Submitting logs takes about 7 seconds. <smiles>

I receive an ADIF file, which is imported into my logging software for QSL management.

The same ADIF is 'signed' - the TQ8 created, and attached to an e-mail.

Job done.

From: Chuck Layton
Topic: 2160 Message: 2160

Ok, so someone can become a QSL manager for a DX station and put it on LOTW?

That would help a lot. I spent 11 years in the AF and met a few people back just before Desert Storm and I know of 2 stations in Turkey that would take your money just to get the money and wouldn't send back a card unless they needed yours then they would send a card first just to increase the odds of getting your card.

Anyway, I didn't mean to start such a round of discussion. I had it pointed out to me that security was one reason. It never occured to me someone would want to mess up a data base. But then remembering a lot of the kids I worked with 20 years ago I remembered that just to try to do something to see if they can was the only reason needed.

If that's the case, why do I not see LotW confirmations for any of
my QSOs with ZK3SB and 6O0CW? I just checked OZ7C's list again and
those are among the calls shown as managed by you.

It's not as if those operations were "ancient history" ... they're
all within the last 24 months.

The descision to sign up to LoTW is not mine. It is up to the holder
of the licence. It is they who have to provide the documentation to ARRL.
If they chose not to do so - that is 'their problem'.

I do manage ZK3SB and 6O0CW for BURO ONLY.
The Licence for these as well as TX4PG is held by I2YSB.

I did say TWO of my Stations I did NOT specify which ones.

If you include myself - It is actually Three.

Chuck,

> I had it pointed out to me that security was one reason.
> It never occured to me someone would want to mess up a
> data base.

It is not so much "messing up the database" as it is modifying the details of a QSO after it has been uploaded. I'm not an expert but the concern was things like modifying a QSO on 17 meters to 160 meters (the equivalent of adding a decimal point to a printed QSL card - which has been done) or downloading QSOs for other stations and modifying the call.

Both of those types of "fraud" are easy if one is using a database driven system to print cards on a local printer as was initially proposed with eQSL.cc. By sticking with a system that generates an electronic signature for each record, LotW can verify that the QSO record has not been modified or corrupted and that the record was generated by the "proper" person (if he has not given his key to someone else).

I suspect that the complainers are not really upset with the data verification ("security") features of the system. What seems to bother most people is what they perceive as the "hoops" one must jump through in order to sign up.

Yes , the hoops and because of the hoops there is a huge lack of usage by
many stations.
The other reason is that STILL after MANY months ONLY DXCC is supported.
I DO realize that it is not cheap to implement this but it was basically
promised in the beginning and if a plan for funds and personnel was not in
place it should never have been hinted at in the beginning.
How many years do we have to wait? Even ARRL awards like WAS are not yet
supported.

It is not a problem for me except that it only supports DXCC, It is proven that either it is a problem for some or it has not enough worth for them to make the effort. The result is the same.
ANY program that is perceived by the users to be difficult to use IS by definition difficult to use and should be fixed.
There can be no argument with that.

I Understand. However, the recent DXCC Yearbook announced that LOTW will soon be expanded to accommodate other awards. Among the other awards which are expected to receive support are:

WAS (Next to be implemented)
WAZ
USCA
CQ DX Field Award
IOTA

Please keep in mind that this an evolving program, which apparently takes a lot of software development. Be patient, learn to use LOTW, and enjoy.

I agree.

The point is, current participation (or lack thereof) has more to do with connectivity than complexity. Until a concerted effort is expended to market LOTW in those remote areas, and perhaps providing organized assistance to the DX, our QSL rates will remain high from modern places, and low from elsewhere.

I posted a note on Topband many months ago, indicating that I would attempt to match up people willing to do the leg work with those needing legwork done. Almost no valid responses. There were a few people willing to help, but very few takers on the 'needing help' side of the ledger. The Topband posting was 'preaching to the choir' I'm afraid. New and creative ways to market to distant lands, in native tongues, is the way to go. Finding local club newsletter editors and providing editorial resources in native languages would be a "rifle shot" to the target market. But it takes talented volunteers with language skills to do it. I would sign up immediately but my language skills are limited to English and a pretty long list of Swedish cuss words that my grandfather used to use regularly (grandma would let him cuss in swedish, but never in English).

Many of the QSL managers are doing an FB job with LOTW. But the vast majority of DX do not use managers. The reasons are many. I suspect green stamps factor into the equation. Lack of interest is another. "I don't collect DX so why bother." There are people on this reflector who refuse to participate because they don't need any confirms. One guy posted on Topband "I've confirmed them all" and refused to upload his log because there was nothing in it for him. Attitudes like that are very difficult to change. Lack of participation has little if anything to do with complexity of LOTW.

As already stated, it is the licencees choice whether or not to sign up to LoTW. However I do not think that 'connectivity' is a 'major'problem - ok it may be in some cases.

There is firstly a misconception that to use LoTW one must be a Member of the ARRL. That was my opinion, until I was advised otherwise. Ignorance or Lack of Understanding ? [Yeah OK, I'm a 'Thick Brit' !] But without searching I can't see on the LoTW website where it says that.

Secondly there is a 'security issue' for some.
To sign up,I had to provide ARRL with proof of ID.
In my case it was a Copy of the Amateur Licence PLUS a copy of my Drivers Licence. This CANNOT be e-mailed but has to be sent by post. Considering that my DL has on it a photo and my signature......nuff said in these days of ID theft ? {The alternative was a copy of my Passport.)

There is also the point that at the moment LoTW is only good for DXCC. WAS has been promised for ages,when it comes it will help takeup - although it means extra fields in the ADIF and the LoTW software.

IOTA {Which is of course an RSGB award] could be a big winner - except that if I go to an English Island /P then I may need a second LoTW 'account' for that island. And a third for the next Island. - The software logistics are horrible. Be thankful that I am not an 'MM' [Although I could be if out /P - and thats a different Country,and another LoTW 'account']

I have long urged that ARRL provide "A LotW Primer" in local languages
(even English <G>) for the national amateur magazines in the rest of
the world. So far, no response. In addition, I have urged that they
do "on site" LotW sign-up at regional (international) ham events
(like next weekend and the big JA show) and seek cooperative agreements
with RSGB, REF, DARC, JARL, etc. to perform "user authentication" closer
to the end users.

> There is also the point that at the moment LoTW is only good for DXCC.

Actually, the fields for State, IOTA, Grid Square already exist in
tQSL's "station location" data and are processed by tQSLlib.dll that
can be used by logger developers.

Once one is registered for LotW (has received the primary certificate),
there is no issue in establishing other "accounts." As long as the
operation were from the same country and you did not care whether the
callsign used /p, you could even create multiple station locations
(e.g., 'home', EU-xx1, EU-xx2, etc.) within your M5AAV account.

It is only when the callsign changes that one needs additional accounts.

Topic: 2172 Message: 2172

Folks,

Just follow your discussion, and from your comments I see
the major shift in our interest for LoTW. From technical novelty
we now move to question of SERVICE?

On one hand is the service provider (s/w production and maintenance,
storage space, backups, saving data for extended period of time in ever
increasing volume, communications costs etc...).

On the other hand we have direct end-users. Most of discussion
coming from them deal with request for new features, support for new
awards, more widespread participation, use of multiple call signs/locations,
authentication policies etc.

Now we start talking about managers, or as I call them 'QSL agents'
for others. We have first to understand the services we expect the 'agent'
will do for his/her own clients using LoTW, as well as what the service
provider needs to do to enable existence of such 'agents'.

Your valuable proposals would be easier to understand if you channel
them along those three (or more) lines.

73 Nenad VE3EXY/NZ2R/4N7ZR ....

Gil... I understand and agree with your point... "difficulty", like most attributes, is defined in the eye of the beholder. However, there are thousands of LotW users who find it easy enough to use regularly, and their experience must be counted for something, even though we don't hear from them as often.

I believe LotW has had some recent changes that make it easier to use. But it still needs to expand into other awards, particularly WAS. And we sure need a lot more DX users.

I was a bitter complainer who found LotW's levels of security and complexity intolerable, but with a little patience and help from the guys on this reflector and other friends, I learned....and I'm happy with it now.

Of course, I don't really have to deal with the complexities much anymore, because I use a fantastic free logging program ... DXKeeper by Dave AA6YQ.... which has LotW interface features that make using LotW very quick and easy.

But I still remember the kindness and help I got that put me on the right road. Thanks.

73, Jerry K3BZ

I have been using DXLABS for a long time. I gave up on Logic and never regretted it one bit.
His program defines both ease of use and technical support. I have seen none better.
This is not a crack at LotW as it has superior support. It unfortunately does have complexity, The complexity is more in the becoming a valid user than actually using it once you have joined. I still think they go way overboard on security. Requiring of renewal every year and no really easy way to handle multiple locations are probably the worst part. Programs like DXKeeper make it a snap.

From: Jerry K3BZ
Topic: 2143 Message: 2177

Good point, much of the world isn't connected yet. But what about the DXpeditions that cover many of the 3rd world countries? They often are based in highly computerized countries. Many of the ops in 3rd world countries have QSL managers in computerized countries. Almost all of them could easily use LotW if they wanted to.

What I'm hearing is that there are a lot of ops choosing not to use LotW, not because they haven't heard of it and not because they aren't connected, but in spite of it.

So I think the more important question is .... why isn't LotW more attractive to more of them?

> Of course, you are thinking about your friends and acquaintances here in the US. I would agree. But what about 3rd world countries, which are missing from my list of confirmations. What about them?
>
> I just got back from VK / ZL a few weeks ago. Sure, lots of people are connected in major population centers. But what about Zimbabwe? Greece? Turkey? The Sudan? Egypt? Just about everywhere in the South Pacific. I need my Qs confirmed from a bunch of places. With 25000 DX in my log, you would think I could get past the 60 country mark--all bands--mixed modes. There is a huge part of this world that is not connected. And THAT is the world I need confirms from.

That conclusion seems inescapable. I don't think there's anything that's necessarily negative about DX relying on greenstamps, but I may be in the minority on that.. If there's a little left over from buying the postage, I'm happy to think it might help the DX to improve antennas and station gear. LotW won't do that.

ARRL's Wayne Mills N7NG has said that LotW was never intended to actually replace QSL cards, it's just to provide an alternative for working towards DXCC. But I think a large number of us look at LotW as a way to save time and money. If we look at it as partly a money issue, we sure can't fault some of the DX for doing so.

2181. Green stanps

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-06-18 21:02:52 UTC
From: Mike(W5UC) & Kathy(K5MWH)
Topic: 2181 Message: 2181

I don't have a problem with the DX stations having a little left over after they pay postage. I DO have a problem with them making a business out of it. Specifically, some that say, minimum of X green stamps required, when we all know it doesn't come close to that many to return a QSL.

Question: Is LOTW down? I just uploaded a file with around 134 contacts, and don't have an acknowledgement back from the computer. It usually takes less than 5 minutes.

73,
Mike, W5UC

Strange. I just looked at LOTW, and my total hasn't changed. That's the
first submission since I renewed my certificate not too long ago. I hope
it isn't screwed up.

As far as a station having money left over from the green stamps. I don't have a problem with it either. I only had a problem with the 2 guys I ran into in Turkey back in the early 90s that only wanted the money and had no intention of sending you a card back. I'm not an avid DX chaser but I do like to collect rare cards if I can.. Now those 2 guys are probally more the exception than the rule but you do find on like that from time to time.

At least you can get into the LOTW user web page. I can't get the page to come up so I can even log in and see if there have been any more confirmed QSOs

Chuck, try again. I just uploaded some qso's that had errors that I corrected. It responded much faster than an hour or so ago.

For those who complain about the "hoops" that one needs
jump through to sign up for LotW ... and compares it to
eQSL.cc ... here's the "other side of the story."

On Saturday my call changed from K4IK to W4TV ... this
morning I decided to open up an eQSL account for W4TV.
I logged into my K4IK account and "added a new attached
account." Since I do not, as yet, have the paper copy
of the license, I converted the "Reference Copy" I had
downloaded from the FCC web site to .jpg and uploaded it.

eQSL REJECTED IT!

Talk about absurd "authentication" requirements. It's
not as if I am "unknown" to eQSL - I have accounts for
four previous calls and all of them are "AG."

With LotW, I simply generated a new certificate request,
signed it with my K4IK certificate and away it went.
The LotW certificate for W4TV will be processed on Monday
morning with no further documentation, etc.

I find it interesting that the "easier to use" system
has its issues too.

My experience with eQSL included literally dozens of "QSL's" from stations I had never worked --- yes, DOZENS, including a lot of new "band countries" which I believe were from "fishermen. I finally logged out of eQSL the day I found a QSL card (which I could have easily "claimed") for a 160M QSO with a JA.

Dick-

At 150Z 6/25 I uploaded a small group of QSOs (automatically with LOGic 7) and had no problems.

I also immediately downloaded the results and to parody the Geico Car Insurance ads, "I just saved a lot of money on my QSLing with LoTW!"

I was ready to start the process of sending out a stack of QSL cards direct for an ARRL Challenge endorsement and found LoTW QSLs of six recent contacts already there. That saved me around $30 counting IRCs, stamp, envelopes and cards. Low cost instant gratification was exemplified by my 6/23 QSO with HR1CP, that I needed on 12 meters, when Herman said that he uploads his QSLs to LoTW every night . . . and he did. That spirit sure makes chasing awards more fun.

Art,

I saw where this came from ... most people fail to realize there is no need to renew the certificates for Dxpedition and special event calls unless the call is to be reused on a semi-regular basis.

In the case of a DXpedition, once the entire log is uploaded if the certificate expires the log data is still in the database and still available for matching. The one year period should be enough to upload any corrections, if needed.

From: Joe Subich, W4TV
Topic: 2143 Message: 2197

I've been going back through my logs trying to catch on a large backlog of band/countries. I find it really strange that almost one week to the day after I mail cards/SAE/green stamps - for one and two year old DXpeditions - the QSLs show up on LotW!

The first couple times this happened I put it down to chance. However, I've had it happen four times in the last two weeks - more than enough to decide that it is no coincidence. I really feel this behavior is not consistent with the spirit of amateur radio. If the DXpeditions, large and small, can have the log search on-line - sometimes while they are still "on the island" - there is no reason for complete logs not to be available on Logbook of the World within 30 to 60 days.

There may not be a technical reason, but there is a sound practical reason.

Some of the most ambitious DXpeditions base part of their budget on the support they expect via the QSL mail. Thus it always has been, and it's a generally accepted way of financing these expensive efforts. Only the most "well-heeled" groups could afford to amputate themselves from that source of help, and it would dry up to a trickle if LoTW got early copies of their logs.

To their credit, almost every major DXpedition group eventually seems to provide their logs via LoTW, so the message seems to be that if you're in a hurry send green stamps, and if you're less anxious then check LoTW in about 6-12 months.

Seems fair to me.

This isn't a case of six to 12 months ... the last few cases were:
17 months, 20 months, 15 months, and 36 months. Some of the stations
involved were vacation or contest operations - not major/high cost
efforts. That's a far cry from YV0D (five months) and 3B9C (one
week) which were received via LotW before cards were even mailed!

If a station is going to send a contribution (more than the cost
of postage and printing) with a card, he's just as likely to send
it whether the confirmation is on LotW or not.

Uploading the logs to LotW saves the DXpedition the cost of printing
and handling the tons of bureau cards (and direct cards with only
postage) that represent a significant additional net cost.

With great respect, BUT.....until LoTW has more than the current
10,007 users,[15,076 callsigns] any DxPedition / Special Operation is
merely pandering to a very small minority by using LoTW. Any half
decent DxPedition will make more than 5 times that number of QSO's, so
even if they worked all registered LoTW users there would still be
40,000 paper cards to be handled.[assuming incorrectly 100% QSLing]

The argument of saving 'huge' amounts of money just does not currently
hold water, and will not until LoTW has, I suggest,at least 500,000 Users.

My 'return rate' via LoTW is currently at less than 5% overall and
less than 1% for Datamodes.
So far from last weekends IARU 'bash' - I have ONE LoTW confirmation -
thanks K1TTT <smiles>.

For the next few years what is needed is not only the 'qsl sure via
Buro' tag but also 'qsl sure via LoTW'.

As an aside, has anyone on PSK31 noticed the huge increase in stations
saying 'NO - e-qsl ?'

73 Graham
M5AAV

You're too optimistic about the number of actice DXer's, Graham. Say
best dxpedition makes 100,000 QSOs, and many of us make up to 20 QSOs,
like me in K1B case. So I believe the number of active DXers in the
world is something about 30-40,000 different calls. You can compare
that number with the number of calls in the latest master.dta file,
which is of the same range, I guess.

Ragchewers prevail :)

But,when I sign on to LoTW - it tells me how many users there are.

I assume ARRL have built the system so it is expandable if needs be.

10,000 users is not even 1/5th of UK Licence holders and we are a
small country <smile>

Which begs the question,'Why have I got an LoTW account ?'
I am not a Dx-er per sé. If they are there I will try to work them, if I miss out, then tough cookie.

For me, it is just another facet of the additional hobby of QSLing. Sure I have DXCC on the wall, and WAC. But I'll never make Honor Roll. The last major DxPedition I worked was D68C. I upload my QSO's just in case someone needs them.

Even G6PZ who I am QSL Mangler <sic> for, hasn't got DXCC on LoTW, and he runs considerably more power than I,into beams which are the envy of most UK stations.

I dont think anyone *needs* to be a DXer to use LoTW, people probably just need to be made aware of its capabilities - which will be even better when WAS [and maybe one day IOTA] comes on stream.

Graham,

You will be surprised how few people are interested in
QSL business at all. Canadian case:

Number of license 40K+

QSL Bureau users: 2K

The scalability issue is multilayer problem. It is not
just the number of users/number of records game. There is
number of transactions per minute, distibution of processing,
distribution of entry points, backup and restore of data,
new realase or s/w patch application while the system IS,
help desk etc ...

You make an excellent point "... built the system so it
is expandable if needs be." Expandable to WHAT?

Supplementary tool for One Award Program, or WW
QSL Service replacement?

73 Nenad ....

IOTA would be another HUGE addition along with WAS. I wonder if IOTA will ever happen as then there would be no revenue from selling the IOTA list?

Previous postings that there are not enough users are not what are important. IT is just like Color TV in the 50s and High Definition TV today. NO programs because not enough sets and not enough set because there are not enough programs.

It is a perfect analogy and it is a big question when it will be solved, if ever in the case of LotW. The TV WILL be solved because of the huge advertising business and the huge potential for selling hardware.

That doesn't surprise me at all.

I am the RSGB QSL SubMangler for the M5 series.

Over 20% of the cards I get each month are 'not wanted'.
Since the series started in 1999 I have had over 10,000 unwanteds, and it is getting worse with people 'forgetting' to replace their SAE's, then not responding to e-mails. Now I don't chase them, it is just not worth it.

They say Rome wasn't built in a day, and as a former LOTW critic I now must admit it has come a long way and I can see its merit has grown in the past year or so.

However, not only does LOTW need to apply to more awards...such as WAS, perhaps IOTA, and definitely the new CQ year-long contests.... but I think it would also get a big boost if the instructions for signing up and using were published in greater detail in more languages.

Seems to me that, just as with most tools, the easier LOTW becomes to use, and the more useful LOTW becomes, the more users LOTW will attract.

my2 cents, 73, Jerry K3BZ

The system could be a dream to use if you had only to enter your call, your location , and any other required things, hit enter and ALL other setup would be automatic including getting a certificate if you still need one. Nobody should have to know anything about keys and other crypto geek speak to get set up.

This may not ever happen. Crypto is not used on email in any large amount yet because it is so hard.

The RSGB has dropped the requirement that you have an IOTA record book number for IOTA submissions. The directory is now available on-line. Many (myself included), I believe will continue to purchase the printed directory.

At the Visalia DX convention IOTA dinner this year, Martin G3ZAY and Dominic M0BLF were present and indicated that the RSGB is looking at what it will take to incorporate LOTW into the IOTA program.

IOTA would be another HUGE addition along with WAS. I wonder if IOTA will ever happen as then there would be no revenue from selling the IOTA list?

Previous postings that there are not enough users are not what are important. IT is just like Color TV in the 50s and High Definition TV today. NO programs because not enough sets and not enough set because there are not enough programs.

It is a perfect analogy and it is a big question when it will be solved, if ever in the case of LotW. The TV WILL be solved because of the huge advertising business and the huge potential for selling hardware.

Gil:

G3KMA, the RSGB IOTA Manager has a website at
http://www.g3kma.dsl.pipex.com/

The 2004 IOTA directory is published in sections. There is an additional
section that lists additions since the 2004 directory was published.

From: rojomn
Topic: 2143 Message: 2213

This is nothing new and not much more usable than it ever was. It is still designed to force the purchase of the list in a usable form for programs. Luckily I use the DXLABS suite and they have produced a program that has the directory included and is integrated with logging and tracking. For those that don□t use this or a similar one the list you point to in .doc format is useless, and even=n more so to those that don't have word or a word reader.

I agree that they have a perfect right to try to encourage the purchase but I think it hurts them and it certainly does not lead to the thought that it will be on LotW anytime soon.

As an example, to have a printed list and a machine readable list for a program like Logic, you have to buy the book and then you have to pay another 10 (I Think although perhaps you get both for 10 ?) and install it in the program. This is the only award program I know of that tries to charge for participation.
Again, they do have the right to do this and people have to decide for themselves if it is worth it to them or not. Many do think it is.

I have used logic in the past and bought the listing but I don't think one should have to pay again for every update. You don't if you just use update but do if you want a full new listing in one group. The listing is also useful only for that one program so if you have others that need it you pay again.

Gil,

I am not IOTA member, but I suggest that you more carefully read http://www.rsgbiota.org/pdfs/charges.pdf because after initial payment of $10.00 for IOTAMEM program you save 35% of $0.125 QSO charge. This means that after 229 QSO's submitted you actually start saving money... BTW program is free for download and fully functional, but you need to pay to have program's electronic submissions accepted.

Regarding charging for participation, into which category falls ARRL's $10.00 or $20.00 application fee which have to be paid with each submission?

that happens quite often especially on mondays..
seems something runs out of specifications unattended
over the weekend.. it returns to normal operation at
east coast office time probably someone hits reset!?

At least as far as LoTW qsls goes.
I even got a few LoTW qsls that were good for Challenge submission.

Here's the URL.
http://mywebpages.comcast.net/w9ol/reports/July-LoTW-QSLs.htm

I noticed a few of those were coming the late 90's.
Still my earliest LoTW qsl was from a 1971 qso....

Things are more like they are now than they ever were before.

> It would save a lot of time and ISP charges to users
like me on a pay
> by minute dial-up service.
>
> 73 Mike ZL2MM (ex ZL2AMA)

Note that he says he pays by the minute for dial-up
service! I wonder how common this is in other parts
of the world?

VERY FEW pay by the minute any more I suspect but some may be paying by the byte. In UK there is a broadband that will be at least 10Mbps but with a limit (pretty large) of monthly traffic

It would be only nice if an indication would be given when the system is down, of course if it is totally down then it is impossible to give this indication :-)

I guess you can say this "VERY FEW" for dial-up users in USA. Here in Bosnia and Herzegovina not only that you pay per hour (per minute) rate to your ISP for use of Internet but you are also charged per minute for making a local telephone call to ISP.

2237. LOTW Availability Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-11 14:01:36 UTC
From: James M Punderson IV
Topic: 2237 Message: 2237

I think the LOTW system is a wonderful idea despite the relatively slow pace of extending it to more awards and the confusing information that confronts new users. I do see more logging software supporting LOTW and supporting it better. That is making it easier for new and old users to use the system so that is a good development.

I personally upload every single QSO to LOTW and eQSL because using DXKeeper it takes only a few clicks to do so and two-way synchronization takes place with a VERY brief connection to the system. And it is exciting to see confirmations of new countries showing up quickly in the LOTW system.

BUT I am SHOCKED at the amount of times the system is not available. As I write this, the system has been unavailable for over an hour and a half this morning (13:55 UTC).

The ARRL (of which I am a supporter and a Life Member) is squandering an opportunity to make this system a successful world-wide one by continuing to have these operational problems.

My business consists entirely of making web-based applications available to our customers all day every day and we would have gone out of business long ago if our site was unavailable as often as the LOTW is.

I do not know what the problem is because the ARRL isn't talking about it (as far as I know). It could be that with more users joining the system the servers are overloaded in which case additional and/or more powerful servers are needed.

Or it could be that the servers are not configured properly in whcih case more knowledgable people should be brought in to fix the problems.

It could be that the software design cannot handle the load of more users which would take longer to correct. If that were the case the ARRL should ask folks to limit their logins to once a week or whatever is needed to reduce the load until the design can be improved.

In any event as users around the world try to use the system and experience difficulty they will turn their back on it and it will be very difficult to get them to come back. And that would be sad because LOTW is a great idea with the potential to save both DXers and DX stations a great deal of time and money.

At a minimum the ARRL site should have explantions of what problems are being experienced, when they are happening, when the system is expected to be available again and what is being done to permanently

fix the problem.

Some time ago eBay had frequent operational problems but they had a different server that was always available that explained what was happening and why and what was being done about it. As a user, not being able to access the eBay auctions didn't make me happy but having an explanation and a time the system would be available encouraged me to keep using eBay. I suggest the ARRL do something similar.

Tnxs for having me......

Russ / KU4FP

Hello,

Welcome to the ARRL-LOTW group at Yahoo! Groups,

2239. question for LoTW concerning 'renewal'

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-17 11:53:49 UTC
From: FireBrick
Topic: 2239 Message: 2239

I received an email reminding me to renew my cert.
I presently have certs for my 3 callsigns.
For one current station that I qsl manage.

9 old DX operations that were logs saved by the QSL Managers Society.
(I transcribed these old logs onto computer and but them on LoTW)
They still get an occasional LoTW qsl as people get their own old logs online.

Now here is the issue I'm asking about.
When I log onto LoTW to check for MY recent qsls, the Your QSO's page will show ALL of these callsigns for me to choose from.
It will show an numeric total of all the qsls even though many are for my current managing, the OLD logs, and my own log entries.

When I wish to check my own qsls, I have to select my call from among the existing 13 possible callsigns.

If I also select Award Account, again there are 13 possibles.

Now after all that, here is my question.

If I allow the OLD logs calls certificates to expire, will they no longer be added to my qso/qsl numeric totals, nor to the possible choices in the Your Call Sign and Award Account???

To say if another way. I wish to ONLY see my personal callsigns and the one station I manage that is currently active. Will allowing the others to expire achieve that?

Please and thank you.

The certificates were only to allow you to access in the first place so what is there is there forever.
You always need a CURRENT certificate for EVERY call if you want to send any more QSOes to LotW for that call. If not, you don't. What is there is there and can NEVER be changed. It can't (unfortunately even if wrong) be deleted.

If you ever find data for a call is wrong and you want to correct it you must upload the correction and than means you must have a current valid certificate for that call.

1. I thought I answered that by my reply. You will never lose anything earned. Now and forever your credits will remain.

2. If you want to change anything you must get a certificate for the call you want to change data for and then it will be the new data.

That is how I read the rules but I could be wrong. Ask the ARRL if you need more opinion.

In a word 'No' I allowed a couple of my old (one from the '70s)
callsign certificates to lapse, and whilst I can no longer add to or
correct anything, the details are still there in the total QSOs/QSLs
and I can see when and if I get any addtitional hits if anyone
uploads their log - only one to date!!
Yes, they are there for ever, just like any errors you upload.

What I would like to see is the bug corrected which makes my total
decrease when someone uploads a hit for a second time - that's been
around for ever and really ought to be sorted.

Thanks Ivan
That answers my question.
Now I wish I hadn't obtained certificates for the old logs I submitted using my certificate., Just clutters up the screen and makes the numbers totally inaccurate.
Not that the numbers are an issue, I rarely looked at them.
I just don't need to see those old callsigns any more.

Thanks for the info. I'll probably let them expire.

2245. New computer/certificate renewal

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-20 23:00:10 UTC
From: Bill Hawkins
Topic: 2245 Message: 2245

I know this subject has been discussed before but I didn't think I would need the information
so I didn't keep it.
Last month lightning got into my computer and I had to get a new one.
I have been patiently putting my old information on the new computer but I have not yet changed my certificate over.
Today I got my notice that it is time for renewal.
I need to know the best way to do this.
I think I need to download a new tqsl, copy the old certificate to the new computer, then renew.
Is this right or is there a better way?
I don't supposed there are detailed instructions for doing this?
Thanks
Bill W5EC

Bill, I am no expert by any means but your on the right track. Get your new machine back to matching your old one ..... download and install the latest Tqsl version from the web site the use your backedup .p12 file to restore you to where you were. Then proceed with the renewal as needed.
Good Luck, Dave K8GVK

Date: 2005-08-21 22:30:54 UTC
From: Bill Hawkins
Topic: 2245 Message: 2248

Ok, looks like there is a bit of trouble here.
I downloaded the latest Tqsl file.
I imported my backup certificate.
Just before it started importing, a popup notice said the certificate had expired.
This can't be right as it is supposed to expire in September--I just got the renewal notice.
But, when I click on the imported certificate, I can not select "renew certificate". It is not highlighted.
Properties show no begin date and no end date; it does have the correct QSO Start Date but it also has a QSO End Date which I thought was supposed to be open.
Anyway it appears that it is no longer valid for whatever reason.
Can I get a replacement certificate and then renew it or what is the correct procedure?
Thanks
Bill W5EC

Bill, I am no expert by any means but your on the right track. Get your new machine back to matching your old one ..... download and install the latest Tqsl version from the web site the use your backedup .p12 file to restore you to where you were. Then proceed with the renewal as needed.

Bad news is possible. If your certificate is not valid and you have no valid certificate for the call you may have to go through the postal validation again.

Subject: [ARRL-LOTW] New computer/certificate renewal

I know this subject has been discussed before but I didn't think I would need the information
so I didn't keep it.
Last month lightning got into my computer and I had to get a new one.
I have been patiently putting my old information on the new computer but I have not yet changed my certificate over.
Today I got my notice that it is time for renewal.
I need to know the best way to do this.
I think I need to download a new tqsl, copy the old certificate to the new computer, then renew.
Is this right or is there a better way?
I don't supposed there are detailed instructions for doing this?
Thanks
Bill W5EC

Bill:
Well lets do this.....go to the LOTW site, click on "Your Account" and then click on "Your Certificate". Now your certificate and all it's info will appear including the expire date.
If all is in order, click on "download certificate" link and you will then have a good replacement certificate to work with. Remember, you can see and review the data before you download it......
What you DON'T want to do is order a new certificate if the one you have is valid...this really messes things up...I have been there!
If all else fails, give LOTW a phone call before you go and order certificates. There most helpful Bill.

Subject: Re: [ARRL-LOTW] New computer/certificate renewal

Ok, looks like there is a bit of trouble here.
I downloaded the latest Tqsl file.
I imported my backup certificate.
Just before it started importing, a popup notice said the certificate had expired.
This can't be right as it is supposed to expire in September--I just got the renewal notice.
But, when I click on the imported certificate, I can not select "renew certificate". It is not highlighted.
Properties show no begin date and no end date; it does have the correct QSO Start Date
but it also has a QSO End Date which I thought was supposed to be open.
Anyway it appears that it is no longer valid for whatever reason.
Can I get a replacement certificate and then renew it or what is the correct procedure?
Thanks
Bill W5EC

Bill, I am no expert by any means but your on the right track. Get your new
machine back to matching your old one ..... download and install the latest Tqsl version from the web site the use your backedup .p12 file to restore you to where you were. Then proceed with the renewal as needed.
Good Luck, Dave K8GVK

Thanks Dave,
Part of this works well.
I found the certificate and it expires 2005-09-10, so it is still good.
I clicked on download and it saved it to desktop.
I go to desktop and click on Certs but it comes up the same as before--"Expired".
I tried it again a couple of ways, but still expired.
Now, this is a new computer with Win XP. Wonder if this could cause some type of problem like firewalls, etc?
Might have to give ARRL a call.

OK, dumb question, perhaps.
What is the date on your computer? Right click on the time in the right hand side of the taskbar and click "Adjust Date/Time". Is the date correct, including the month and year?

>I tried it again a couple of ways, but still expired.
>Now, this is a new computer with Win XP. Wonder if this could cause
>some type of problem like firewalls, etc?

Nope, no possible problem with the windows firewall. If you've managed to download the file, it's already on your computer and not subject to firewall rules.
Either you don't have a valid certificate (it's expired already), or your computer's date is wrong making it look like the cert is no longer valid.

This is about as complicated as "What kind of car should I buy?"

Your needs dictate the best solution. Are you into contesting? Chasing DX? States? Counties? Grids? IOTA? ARRL Challenge? 5BDXCC? 5BWAS? Do you eQSL? HF, VHF, UHF, SHF? Do you need radio control support? Do you want info on paper QSL routes? Is price important? Do you use more than one radio? Whew! The list goes on.

Doug,
I found that AC Log (Amateur Contact Log) by N3FJP, www.n3fjp.com is a great program. It is easy to use and is priced right. You can down load your logs to LoTW with from AC Log. Scott, N3FJP will answer your questions quickly. They also have Contest software tailored for each contest and it is easy to use. All of their software will run on all Windows produces. You can down load AC Log or purchase a disk, updates from N3FJP site is include in the price.
Good luck and 73

I endorse DXLABS and in addition to free it has the best support of ANY
software I have ever seen, free or not.
The author also listens carefully to the needs/wants of his users.

For a general logbook you can't go wrong here.

For contesting I would get the N1MM software which is also free and also has
good support.

From: Joe Subich, W4TV
Topic: 2254 Message: 2260

Count this as another recommendation for DXLabs (DXKeeper, SpotCollector, PathFinder, DXView, and WinWarbler). The package provides excellent integration with Logbook of the World, outstanding award tracking and some of the very best support from the author that I have ever seen.

I have used several commercial packages over the years and tried many of the "free" packages and none stack up to DXLab.

2261. A problem?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-30 18:44:30 UTC
From: Phil Cooper
Topic: 1987 Message: 2261

Hi all,

After getting an email saying my certificate was about to expire, I followed the instructions and renewed my certificate, upgrading to v1.11 of TQSL software as per instructions, and also deleted the old one (probably a silly move!) as per the other instructions on the LoTW home page.

After doing the SCC RTTY contest, I converted my ADI file, and then uploaded the resulting TQ8 file, but the "My activity" page does not show this upload.

After clicking on the UPLOAD FILE, I did get a "queued for submission" notification, but still don't see anything.

Any suggestions as to what I may have done wrong?

73 for now

I've had a similar problem with a submission - uploaded and all the
QSOs were rejected but no information on the web site. I found out the
problem (I was using the wrong certificate) by e-mailing the submission
to lotw-logs@... - the problem was obvious from the e-mail response.

Try e-mailing in your file and see what happens.

Hi all

Rick K1MU suggested emailing the logs, which I did, and yes, it shows that I seem to have really screwed up things at this end!

I am now emailing LoTW at the ARRL to see if they can help me sort this mess out!

I also tried to use the P12 file to get back to normal, but that doesn't work either, as it tells me files do not exist!

Oh boy! I don't need this, and almost wish I had stayed with v1.10 software!

2268. Moving TQSLCERT to new computer

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-31 19:26:22 UTC
From: Frank
Topic: 2268 Message: 2268

Hi all...how would one move the TQSLCERT to a different/new computer?
I tried a simple copy method (on cd; it didn't work.

Any advice is very much appreciated.

Thanks in advance.

Frank, VE6NU

2269. Re: Moving TQSLCERT to new computer

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-08-31 20:32:37 UTC
From: Dave Bernstein
Topic: 2268 Message: 2269

Most Windows applications cannot be simply copied from one PC to another. In the case of TQSLCert, its associated library must also be registered with Windows. The easiest way to do this is by installing the software on your computer. If you retained a copy of the installer (tqsl-111.exe) on your old PC, you can copy this to your new PC and run it; otherwise, you can download it via http://prdownloads.sourceforge.net/trustedqsl/tqsl-111.exe?download .

If you have a certificate on your old PC that you'll be moving to your new PC, you'll need to move its .p12 file ("certificate archive") because its .p6 file ("raw certificate") cannot be moved (or backed-up, or restored). If you don't already have a .p12 file,

1. run TQSLCert on your old PC

2. select the certificate,

3. invoke the Certificate|Save menu item to create a .p12 file

4. copy this .p12 file to your new PC

5. run TQSLCert on your new PC

6. invoke the "File|Load" menu item

7. in the "Load Certificate File" window, select ".p12 certificate file"

8. click "Next"

9. select the .p12 file you copied from your old PC in step 4

73,

Dave, AA6YQ

2270. Renewal screwed up

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-09-01 18:19:52 UTC
From: Ford Peterson
Topic: 2270 Message: 2270

My certificates expire on 9/8/2005. I get an email today as a reminder, and a link to get it all straightened out. So I go to the instructions and read, download the new TQSLCert program, and go through the steps indicated. I get the TQ6 files back a couple hours later with the instructions that say 'try double clicking' on the file attached. It opens and does some back room magic.

The instructions read as follows:

****
When your renewal request is complete, you will see an additional line on your TQSLCert program screen. This will look the same as your existing certificate except that it will have a red circle/bar over the seal. This is your renewal request. When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate.
****

The red circle/bar goes away as indicated, but I now have the original certificate and the new certificate listed. So now I have twice as many Certs as I had before. Now what? The so-called "instructions" don't work as expected and I don't know if this is screwed up or not. As far as I can tell, the renewal worked, but I now have too many certificates listed. Should I be worried?

That's a good question. Mine did the same. I am assuming I see both certificates since my old certificates are still valid for another week.

Subject: [ARRL-LOTW] Renewal screwed up

My certificates expire on 9/8/2005. I get an email today as a reminder, and a link to get it all straightened out. So I go to the instructions and read, download the new TQSLCert program, and go through the steps indicated. I get the TQ6 files back a couple hours later with the instructions that say 'try double clicking' on the file attached. It opens and does some back room magic.

The instructions read as follows:

****
When your renewal request is complete, you will see an additional line on your TQSLCert program screen. This will look the same as your existing certificate except that it will have a red circle/bar over the seal. This is your renewal request. When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate.
****

The red circle/bar goes away as indicated, but I now have the original certificate and the new certificate listed. So now I have twice as many Certs as I had before. Now what? The so-called "instructions" don't work as expected and I don't know if this is screwed up or not. As far as I can tell, the renewal worked, but I now have too many certificates listed. Should I be worried?

Guy's:
I just went thri this myself and got the same result...(the new plus the old certificate) With fear, I deleted the old one and kept the renewed one. All seems to works OK even though I deleted it while several weeks were left. I guess the new one superseeds the previous certificate. I was able to upload & preform all functions ect.
So, I suggest you simply delete the old certificate and you should be OK.

Hey Guys !!

I just hate to be the 'slimey old limey' but have any of you looked at
the LoTW Home Pages ?

Second News Item down [on the left, in the yellow boxes] tells you
that this is *exactly* what will happen when renewing a
Certificate,and that you have to remove the old one manually.

As I have been told on many occasions RTFM <smiles>

Ford,

My old certificates did not go away either ... I opened each of
the new certificates and immediately saved a new .P12 backup
then I deleted the old certificates.

That way if anything happens, I have backups of the new certificates
to restore.

73,

2275. old vs. new certificates

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-09-01 19:35:53 UTC
From: FireBrick
Topic: 2275 Message: 2275

After you receive you 'new-renewal' certificates you are to delete the old certificates. If unsure, right click on it and check the properties, it will tell you the expiration date.

From: Phil Cooper
Topic: 2270 Message: 2276

Hi all,

I posted a similar problem a few days ago, and had all the same problems as reported here.
In my case, I compounded it by (apparently) requesting a NEW certificate, rather than requesting a renewal.

Yes, the instructions do indeed say that the old one will remain, but if you open TQSLCert, highlight the old one, and then click on CERTIFICATE at the top, then PROPERTIES, you will see that the fact that you have renewed has suspended your older cert - at least it did in my case.

When you get the TQ6 file in the email, if you click on the little paper-clip, click on the call.TQ6 file, and then select OPEN, it will actually install just the way it suggests it will.
HOWEVER, this may well be linked to which OS you are using.

You can then safely delete the old certificate, BUT DO MAKE SURE it IS the old one first!

Having now got a nice new certificate, run TQSLCert, highlight it, and then click on Certificate at the top, and then click on SAVE, and save the P12 file somewhere other than your usual hard drive.
I am keeping mine in several places, just in case I screw up again!

Fortunately, Wayne Mills came to my rescue, and despite doing all the wrong things, (deleting the newly installed v1.11 and re-installing v1.10, deleting the TQ6 and TQ5 files, plus a few other acts of desperation), Wayne told me how to get back to normal from the P12 file.
Although I had tried this, I didn't use the right procedure, which didn't work.

One question for the LoTW team..... Is this problem of the old certificate staying behind due to v1.11 ?
I didn't have this problem last year with v1.10.

Very best 73

Graham,

Apparently, you did find some reference to deleting these manually. However, the reminder has a link (https://www.arrl.org/lotw/renew) that provides the following info:

****
When your renewal request is complete, you will see an additional line on your TQSLCert program screen. This will look the same as your existing certificate except that it will have a red circle/bar over the seal. This is your renewal request. When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate.
****

So I guess it depends on what version of the 'instructions' you view first. As a user getting a link provided by a reminder email, I deemed this to be a reliable set of instructions. Obviously, multiple sets of instructions need to all be updated...

Duly noted.
Not having had a reminder [yet/recently] I wouldn't have seen that.

Certainly does look like not all pieces of 'relevant' information have
been updated, or are correct. [Maybe in 11.12 ? <smiles>]

Like the commercials from a few years ago, I've been seeing the same stations and the qso's I made with them reappearing.
Over and over, with new qsl dates although they were originally were received as LoTW qsls long ago.

Is this something that is going on with LoTW as part of upgrades or are these people just resubmitting their entire logs over and over again?

Heard the one about the dyslexic devil worshiper? He sold his soul to Santas.

People are submitting their entire logs over and over again.

It's particularly annoying. TQSL allows one to set the date range for signing contacts, so there's no reason to submit contacts more than once. Further, you risk overwriting valid QSOs made from one location with a different station location.

Thanks Bill, for confirming what I suspected.

I know it's not important, as the numbers especially in my case, don't mean anything, but it seems to throw the qsl numbers off.

But, in the scheme of things, at least they are participating.

Maybe it's an education thing.

For reasons I don't know, the process of "signing" a file adds 1 QSO to the count (for example, if you sign and ADIF file with 100 Q's, TQSL tells you it processed 101 Q's).

(Just something I've noticed, and may not be the reason for your 10 missing Q's.)

Are you still using DXKeeper, Dick? If so,

1. On the Main window's QSL tab, click "Sync LotW QSOs"; this will update each QSO in your log to indicate its "acceptance" by LotW. With 70K QSOs, this could take a few minutes, depending upon your internet connection speed.

2. On the Main window's Log QSOs tab, click the Filter panel's "LotW" button; this will display all QSOs that were uploaded to LotW, but not accepted.

2293. Free LoTW User Query Software Program

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-09-10 06:16:42 UTC
From: William Beggs
Topic: 2293 Message: 2293

To aid in determining whether a station that you are hearing is using LoTW, I have made available a free software that uses the database of LoTW users compiled by HB9BZA and myself. Currently HB9BZA is maintaining the list and I am maintaining a searchable database driven by the same listing. Updates have been daily, but recently new callsign information has slowed and the list is being updated every few days. Currently LoTW claims over 15,400 callsigns are registered and we have 9136 of them in the database, representing 269 countries. The main use for this list and the free utility program is that it can be used to easily identify, in real-time, those stations that upload their logs to LoTW, suggesting that it will be easier to obtain their electronic QSLs to be used for ARRL sponsored awards, such as DXCC, 5BDXCC, etc. Download the program at http://www.bbcyber.com. See the same website for information on how you can help add callsigns to the list. HB9BZA also has a more sophisticated and free software program called RXCLUS that incorporates the listing and can tag telnet and packet cluster spots, identifying many known users of LoTW.

This is the answer I got from ARRL.

John ,

On a limited basis, we will take care of the logs. Let me know the
scope, who is involved and the situation. We do ask that the logs be in
some sort of electronic format, with which we can work. We can't enter
data from paper logs.

Subject: LOTW QUESTION

Hi folks,
I have had inquiries from several Qsl Managers around the world
asking me about getting the log for the DX stations they manage uploaded
to LOTW to preserve the contact records.
Most of these managers have no computer or limited computer
knowledge and would like to send the log data to someone to convert into
LOTW format and submit them to LOTW.
Is this possible and how do they go about doing this.
Thank you

As a QSL manager, I've done this for the stations that are no longer active. I transcribed thousands of qso's into a .adi file and then applied for the certificates for these callsigns.
They are subquently forever available on LoTW.

The stations I manage that are currently active do send me their .adi files. This is easy.

I'm currently helping a fellow manager transcribe megathousands of contest logs.

This is the hard part.
Anyone, even a blind wino can convert computer logs to .adi and upload them.

The hard part and the single issue that is limiting the growth of LoTW is that MANY hams still are unable to computer log and don't have the internet available.
There are still managers that only have paper logs for their stations.

What we need is a core of touch typists with good eyesight to volunteer to transcribe these logs.

I can usually punch out about 400-600 qso's while watching my baseball, football, basketball team loose another game. (Obviously I'm a Chicago Fan)

There are a couple of qso entry programs now available that speed up the process.
So maybe the ARRL or GoList can develop a list of volunteers.
Obviously the volunteers would require integrity, fortitude, and 20/20 vision....<wink>

I think the security minded folks at the ARRL would see a security breach in this. If not, let me point out the most obvious...

Right now, the files are signed with the log owner's electronic signature. By doing so, the log's owner (and the person who recorded the Qs) is attesting to the accuracy of the log, or at least to his/her belief in the accuracy of said log. By sending it to a third party, this particular individual (which the ARRL must assume to be of devious mind and malicious nature) could slip Han's callsign into the log with great ease. Then, by uploading said (now bogus) log to the binary archives, and signing it on behalf of the real owner, Hans could get his P5 card, and YO on all bands, including 10.3GHz.

Of course, the same is true of any QSL manager, if said manager is of devious mind and malicious nature. It isn't a matter of ARRL's trust or distrust of QSL managers. Rather, it is questioning the wisdom in leaving the lid off the cookie jar. Often it is not the actual breach of trust that is important. Rather, it is the possibility of a breach that drives public opinion.

The truth of the matter is that any set of internal controls introduced to prevent tampering by two devious minded and malicious intended persons is impossible. It is generally believed that bank embezzlement is nearly impossible when executed by a single individual. When there is collusion of two or more individuals involved, just about ANY bank could be raped of all assets in a matter of a day. The same is true of LOTW. The same is true of the 100% paper QSL system.

In my opinion, opening this up to QSL manager handling is a matter of policy matching practice. Based on the procedures in place, I have a strong suspicion that this is already being done. E.g. If I give Hans my triple-secret password, he could faithfully deliver to LOTW an ADIF I send him, and he could invent one of his own on my behalf and submit it in my name (bogus of course). I would never know because there is no feedback mechanism in LOTW. Said feedback being analogous to the monthly statement you receive from your bank re: your checking account activity.

Until the software people start providing decent reports on log submissions, matches, and award tracking at the local level, there is no feedback mechanism. Until the ARRL starts supporting something other than DXCC, the sofware people are not going to even attempt to support a local tracking system due to having an incomplete LOTW specification. It's a circular deal. The natural leader in all of this is the ARRL. And the ARRL has chosen not to support these other programs at this time.

Add this to the very long LOTW wish list I'm afraid.

The feedback mechanism you suggest is in fact present, Ford. Log on to the LotW Users web page, and click the "Your QSOs" tab; the form there lets you query the LotW database to see both what you've uploaded and what's been confirmed.

DXKeeper, DXLab's logging application, exploits this capability to automatically provide full synchronization with LotW, including reporting and award tracking; DXKeeper is free, and available via www.qsl.net/dxlab .

In other words QSL managers should be outlawed?

You haven't described anything that isn't already possible to do (and a lot
easier) by a "paper" QSL manager.

Hans, and others...

Not at all. QSL managers have been an accepted norm in the QSL process for many years. But I suspect the procedure is somewhat different than was originally suggested.

How about this...

Step 1: The DX submits his license and gets the ARRL to accept it as fact.
Step 2: The DX notifies the ARRL that so-and-so is his/her QSL manager.
Step 3: The manager reduces the log to ADIF and uploads the Qs to the DX account using the manager's certificate.

Simple... And I'll bet it is being done already. If somebody wants to start uploading in this manner, I think the procedures are in place to do so. But it is the QSL manager's certificate that is to be used, rather than the DX's certificate. The log then becomes the responsibility of the QSL manager and not the DX's signature being forged by the QSL manager.

Kewel huh? Hopefully, somebody that actually knows what is going on will weigh in on this and correct me if I'm wrong. But this looks to be OK to me.

If the DX station's QSOs were uploaded to LotW using the Manager's certificate, then the QSOs would be placed in the Manager's LotW account, each with an operator callsign extracted from the Manager's certificate. Such QSOs would never generate QSLs, since no uploaded QSO would match them.

LotW could be modified to support QSL managers as you suggest, but such an enhancement would not soon see the light of day. With serious defects in the renewal process going uncorrected, "nice to have" enhancements won't (and shouldn't!) get attention.

I don't see anything stopping a DX station from saving his or her certificate into a password-protected .p12 file and emailing it to a manager, who would would obtain the password through some suitably secure means (40m SSB), extract the certificate, and use it to upload QSOs on the DX station's behalf. From a DXCC program integrity perspective, this is no different then a DX station authorizing a manager to issue QSL cards on his or her behalf.

The LotW program already allows a manager to upload entries for
stations he manages. However, the "identification" submitted
must be for the DX station (license and ID). The certificate
is created for the DX call and the manager uses that certificate
for uploading.

It's being done by may DX stations currently ... I have several
such confirmations so the system works.

The manager can acquire the certificate directly by submitting
the ID, license and letter of authorization or the DX station
may acquire the certificate and send the manager a copy (*.p12
file).

I don't think that's true. My (perhaps imperfect) understanding of the system is that once a USA operator establishes his "bona fides" (ie, is "trusted" by LoTW) he can obtain additional certificates very easily.

As a personal example, one of my certificates in my LoTW account is for KG6AQI and I upload QSO's for that operator --- not the current Tech in California, but a fellow who lived on Guam about 35 years ago. What's to stop me from obtaining a certificate under other DX calls and uploading their logs?

In a word, Wayne... Each call needs verification. Can you obtain and provide the ARRL verification of other callsigns? Only with the cooperation of the true owner of that callsign.

The owner of the callsign needs to provide verification that they are in-fact the bonafide owner of that call for the period at issue. Without that, no Qs would be accepted no matter who uploaded them.

A manager cannot simply upload a DX station's QSOs using his or her own certificate. Per https://p1k.arrl.org/lotw/faq#qslmanager , QSL Managers must apply for a certificate for the managed call.

The alternative, though not stated in the above FAQ, is for the DX Station to obtain the certificate and then send it to his or her manager for use in uploading QSOs.

2308. Credit application

Yahoo group: ARRL-LOTW (2003 — 2007)

From: Ford Peterson
Topic: 2308 Message: 2308

When I got my DXCC the first time, I selected all CW Qs on 20M. So I got my DXCC, the CW endorsement, and the 20M endorsement, all at the same time. Of course, I had the option of hand selecting the cards from my paper file to accomplish this nifty feat.

I just recently passed 100 entities for the phone endorsement. So, I was going to make an application to purchase credits for all 15 meter SSB QSOs, so I could then get my SSB endorsement, and make good headway on the 15M endorsement at the same time.

Is there a way to select certain credits? LOTW seems to select them for me--a rather willy-nilly collection of bands/modes. Many of these countries I've worked on both modes on all bands but the WARC bands. It seems to me that the ARRL wants me to just pay for all the credits, including all the apparent dupes. Or am I missing something here. I guess I have to go back to the paper file and do it the old fashioned way. Seems like a giant step backwards in terms of a paperless transaction.

Ford
If in LoTW you have multiple qsls for the same band/mode, usually the first one received is the one selected for credit.
(this is complicated by the guys who upload their entire logs every other day)

If you got to 'Your Qsls' and also select your Award Account, you will see a added column, DXCC
This will have a mark indicating this qso is being mark for accreditation.
You have the choice to 'unmark' it.

Then so a search on the qso/qsl you WANT to be credited and select that one in the DXCC box.

Then went you go to the Awards submission module, this qso/qsl will be the one chosen for submission.

Remember you can really refine the search.
Say you want to select your 20 meter ssb qsls. Search on just those, and 'mark' and 'unmark' qso/qsl as you wish.

I did this...and it doesn't take as long as it sounds.

The 'willy-nilly' part is a consequence of people resubmitting logs.
Also;
Logs are not submitted chronologically. So a qso from 2006 may come in long before the a qso with the same band/mode for 1999 shows up.
First in, first selected.

(at least this is how I THINK it works from my experience)

good luck and congrats on the achievements.

Greetings

Can someone advise please what the allowable 'timeslot' is for Logs to match ?

A colleague seems to think it is +/- 10 minutes can anyone confirm this ?

6O0CW I very much doubt will get to LoTW. I do not have the required
paperwork, merely the logs for Buro requests.

9M6/G3OOK will be looked at in the future.

2315. Matching prefixes

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-01 17:25:08 UTC
From: Ford Peterson
Topic: 2315 Message: 2315

I have been using Logger 16 bit for my station log since time began. I need to upgrade it and am evaluating alternatives. I'm stuck in the "if it ain't broke, don't fix it" mode. But I have a question about prefixes

The K7C operation, when entered, comes up at a 7 call. So, I make the entry KH7/K7C and life is good--the log's reports are accurate. But, if I upload this to LOTW, I don't think it will match will it? I am betting I've got a pretty good percentage of my log (28,000 QSOs, about 50% of which are DX) that has fallen prey to my behavior when logging.

Anybody got ideas as to the 'fix?' Is there a way to identify issues with my LOTW data that will allow me to correct the situation by pointing me to the QSOs in question?

Topic: 2315 Message: 2316

KH7/K7C will definitely not match the entry uploaded by K7C.

The better way to handle this situation is to modify your logging application's DXCC database to stipulate that K7C is on Kure Island.

Given the increasing occurence of non-standard or ambiguous prefixes, an "entity override" capability is handy. This lets users temporarily specify a callsign and its DXCC entity without mucking with the DXCC database; when the operation terminates, one simply deletes the override. This should apply to DX spots as well as to logged QSOs.

As far as I know, LotW won't help you identify unmatchable QSOs; if you upload a QSO whose callsign is KH7/K7C, it will just sit in LotW and never generate a QSL. Some logging applications can show you all uploaded-but-not-yet-matched QSOs. If you always used the "slash" approach, filtering your log to display only QSOs whose callsigns contain a slash, have been uploaded to LotW, but have not been matched would significantly reduce the number of QSOs to be manually scanned.

Correction will also be manual, although some logging applications will let you correct multiple QSOs with one set of actions. If you've logged KH7/K7C on 5 bands, for example, you would be able to select them all, and then change all of their callsigns to K7C with one action.

Dave,

Thanks for the input. I can sort out my log in terms of "/" but many calls are likely accurate that contain a "/". For example, a friend of mine works contests at different locations. As many contesters know, signing KH7/K7C is far more effective than K7C/KH7. The accurate way to sign your call from KH7 would be AA6YQ/KH7. Yet this has almost universally become KH7/AA6YQ. The reason is, during a DX contest, running a frequency and signing AA6YQ/KH7 would result in far fewer QSOs than the other way around. Why? Because the listener is spinning the dial before you get to the "Q" much less the "/".

So how do you enter this situation in light of the fact that the DX may likely submit his call the right way, yet you would submit your call the way it was sent on the air? The way it should be? or the way that it is likely to be? (e.g. K7C)

Does DXLAB support the "upload but no match" feature? Or is there another software package?

My logger (HyperLog) allows me to manually over-ride the "calculated"
entity. Perhaps yours has a similar capability.

In the end it probably doesn't matter anyhow, as LoTW will credit you with
the entity the that K7C's certificate stipulates.

2319. Re: Matching prefixes

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-02 01:09:38 UTC
From: Dave Bernstein
Topic: 2315 Message: 2319

Yes, I realize that not every one of the slash-containing callsigns
you logged was a "prefix workaround"; I was just suggesting a way to
cut down on the number of log entries you'd need to manually review.
Any callsign that doesn't contain a slash can't have been a prefix
workaround.

My strong suggestion is that you log (and upload) the callsign given
over the air. If you work me as FJ/AA6YQ, you should assume that
I'll upload my logs with the operator set to FJ/AA6YQ. If I upload
them with the operator set to AA6YQ/FJ, there will be no matches in
LotW, and that will have been my fault (and thus my responsibility
to correct), not yours.

If K7C uploads their logs to LotW, they will upload them with the
operator set to K7C, not KH7/K7C. To ensure a match, you must log
them as K7C.

Yes, DXLab (DXKeeper, to be precise) synchronizes with LotW, and for
each QSO tracks
- whether the QSO was uploaded to LotW
- whether LotW accepted the QSO
- whether the QSO is confirmed via LotW (e.g. "matched")

DXKeeper's filtering mechanism lets you display only the subset of
QSOs in your log that meet specified criteria, e.g. "callsign
contains a slash and accepted by LotW but not confirmed by LotW".

It absolutely matters, Hans. Unless the callsign on the QSO you upload is K7C, there will be no match, and therefore no credit.

I take it back, there is a way for such a match to be generated: convince the K7C team to upload their log with the operator set to KH7/K7C. The LotW guys probably wouldn't appreciate the same 50K QSOs being uploaded with two different operator callsigns, but it would eliminate Ford's problem. It wouldn't be the first time this trick was used, but this would probably set a record for scale.

I believe you're mistaken, Dave. I upload the call (in this case K7C) that the station uses, without any tinkering on my part.

If I upload K7C it doesn't matter a hoot to LoTW what entity my logger assigned to it.

I will get credited with the entity that the K7C LoTW certificate specifies, EVEN IF MY LOGGER DOESN'T ASSIGN AN ENTITY, OR IF IT ASSIGNS AN INCORRECT ENTITY.

From: Dave Bernstein
Topic: 2315 Message: 2322

That's correct if you upload a QSO whose callsign is K7C, Hans, but
that's not the situation Ford described. He's asking about uploading
a QSO whose callsign is KH7/K7C.

Ford's not doing that to convey "Kure" to LotW; as you point out,
LotW knows that K7C is on Kure from K7C's certificate. Ford is
logging the QSO as KH7/K7C to force his logging application to
record the QSO's DXCC entity as Kure, presumably so that its award
tracking will be accurate. But having logged the QSO as KH7/K7C, it
will be uploaded to LotW as KH7/K7C, where it will remain unmatched.

Hello Ford,

Saturday, October 1, 2005 Ford Peterson wrote to ARRL-LOTW@yahoogroups.com:

FP> The K7C operation, when entered, comes up at a 7 call. So, I
FP> make the entry KH7/K7C and life is good--the log's reports are
FP> accurate.

I do not remember how it works in L16, but in Logger32 you can add K7C
to the database for Kure calls, just like it is done for K5K, K7K and
some other calls of that sort. Next version of L32 will have corrected
database installation coming with it. Just do the L16 upgrade to L32
and log the calls exactly the way the operators spell them.

All logging programs I've used have a database of DXCC countries/prefixes that have to be modified, and/or have a field in the log other than callsign where one can change the DXCC country. Don't change the callsign! It definitely won't match LotW

Simple solution, is not issue these 1X1 calls for DXpeditions!
That's not what they were intended for anyway.

It's not like they'd have to sign /KH7K after each QSO anyway!!

Just my minority opinion.

I just saw Dave at the W9DXCC bash.
And that was a topic of discussion.
Hopefully they will get it worked out. But I don't think it's REAL eminent.

Actually I think the IOTA program WOULD BE EVEN MORE OF A BOOST than WAS.
The growth of IOTA has been remarkable.
Same thing with the LightHouse program.

I'm not sure what you mean.

If we don't post our logs,
IF we don't cajole others to do so.

There won't be any real push to advance the program.

I have buffers in my keyer and rtty program 'suggesting' they take part in LoTW.
I've had many replies that they will join.
Even got a few new band/modes qsl's that way.

But this has all been said before, hopefully some news will break that will add additional incentives for others to take part.

We rush for the stars as we crawl toward our graves.

> Hopefully ... soon.

Last Tuesday, I was at the annual meeting of the Minnesota Wireless Association. Director Bellows was there to give a short presentation to the group. I asked the specific question "Is LOTW going to support awards other than DXCC?" His answer, the best I can recall was as follows:

******
It is the intent for LOTW to be able to support other contests. They are testing WAS right now. As far as other award sponsors, it is the intent to be able to support these awards as well. BUT, it is not up to the ARRL to bring these people on board the program. It is up to these other sponsors to make suitable arrangements for LOTW to administrate their awards. At this time, there are no other sponsors working with the ARRL to do so.
******

So there it is, the best as I can recollect. Forgive me Jay if I have misquoted you, certainly there is no malicious intent on my part. When asked if he could speculate as to when WAS is going to be available. He professed no reliable knowledge of a time table. It is in "testing."

My personal view is that the ARRL needs to roll out it's program to support its own awards. Other sponsors can then evaluate the system to see if it is suitable, advantageous to them, and better than their current systems. Patience is a virtue. Change is a process requiring patience. And everybody hates Change. A quagmire of sorts. So we wait...

"At this time, there are no other sponsors working with the ARRL to
do so"

If true, I'm sure this has ARRL management heaving a big sigh of
relief. As is clear from the time required to implement WAS support -
- an awards program fully under ARRL's control -- the real issue is
insufficient resources available for LotW development, maintenance,
and operation. There are a raft of obvious improvements that would
make LotW more appealing and easier to use. The issue isn't lack of
vision or quality personnel, there's just not enough staff assigned
to this program.

73,

Dave, AA6YQ

I am thinking that DXCC is a very unusual program by 'awards' standards. And the process is quite a bit more involved. Just look at the shear numbers of people on the headquarter's phone list that are assigned to the DXCC desk. Very labor intensive by comparison to other awards. The fact that the entire process was rolled out with DXCC as the flagship award is a testimony to the technical vision of the people involved.

I am also thinking that the process for the other awards will look and feel much different than DXCC by comparison. Careful planning and design at this point is extremely important to adding additional awards later. My gut tells me that WAS will be next, and the snaffus will get worked out with WAS, at which point additional awards can be added at a rapid rate--again, a testimony to careful planning and design now, rather than having to re-work everything later.

Yahoo! Groups Links

2339. RE: [ARRL-LOTW] Re: WAS Support when?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-02 21:49:54 UTC
From: Joe Subich, W4TV
Topic: 2327 Message: 2339

Why ... because the Board of Directors has their heads where the
sun don't shine and are not providing enough resources for LotW
development and promotion.

LotW development is done by one person who has primary responsibility
for ALL computer systems ... including "production" systems which
have priority. There is NOBODY with primary responsibility for
promoting LotW and/or "selling" LotW to the sponsors of other awards
programs.

73,

... Joe, W4TV

Which means it is likely that it will NEVER be a success except PERHAPS???
For DXCC. What a sad commentary on the ARRL!
Hire Dave, he would get it done, nahh he would not want that job :-)

Last I heard, when I wrote lotw-help, WAS support was coming 2nd or
3rd quarter 2005.

Uh, Wait. We're now in the 4th quarter.

Looks like it is long overdue.

I can see this is a tough situation. It's hard to front a lot of money to invest in a program that may not recover the expenses for some time. Easier to pay it out using excess capacity. A heck of a lot slower, though.

Chicken and egg. Can't really sell the program to other award sponsors when ARRL doesn't even support its own main awards (DXCC, WAS, VUCC), can you?

The "Stove, give me heat, and I will give you wood" strategy rarely
works.

There's no point buying a stove if you can't afford the fuel. Unless
you need something to bang your head on...

Dave's 100% correct. The League isn't going to spend money on extending LoTW unless you let your division director know that it's important. If there's no committment to get it done, it won't get done.

Have you told your director that it's important to get this funded and done? If not, don't complain - apparently the League doesn't think it's worth doing because nobody cares.

~~~~~~

"Invest" is not exactly the right word here. ARRL is a non-profit organization and does not have to show return on investment. That's what we pay our dues for and that's how I want my dues spent.

I suspect the underlying problem is that ARRL greatly underestimated how difficult implementing LoTW would be. They're not the first to make such a mistake.

2346. A perspective on worldwide LotW usage

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-04 04:19:14 UTC
From: Dave Bernstein
Topic: 2346 Message: 2346

A few weeks ago, Henryk SP3E drew my attention to a database of known LotW users being collected by HB9BZA at http://rchalmas.users.ch/lotw/ and suggested that I extend SpotCollector to highlight known participants. SpotCollector is a member of the freeware DXLab Suite; it collects DX spots from up to six sources into a database that the user can sort and filter in real time. Spots of the same callsign in the same mode near the same frequency are combined into a single database record. Stations needed (with respect to declared award objectives) are appropriately highlighted using font color.

I recently released a new version of SpotCollector that adds an LotW field to each spot database record; this field is set to 'Y' if the spotted station is a known LotW participant. SpotCollector can be configured to highlight known LotW participants with a unique background color; the user can also filter the spot database display to hide stations known to participate or stations not known to participate.

The current list of known LotW participants contains 9346 callsigns. The LotW web site claims 15927 active certificates as of a few minutes ago, so the known LotW participants list contains just under 60% of the total. Given the collection process being used by HB9BZA, we can assume that the known participants list would be the more active LotW users, which may somewhat bias conclusions based on this data.

In the interval between 0400Z on 10/1/05 and 0300Z on 10/4/05, my instance of SpotCollector collected 8780 spot database entries from 5 telnet-accessible clusters:

- DX-Central
- K1TTT
- KS4Q
- JK1ZRW
- DX Summit (OH2AQ)

788 of these spot database entries were for known known LotW participants. I loaded the spot database into Excel and found 3827 unique callsigns, 265 of which were known LotW participants.

The 265 known LotW participants spotted during the above interval break down by DXCC prefix as follows:

135 - K
12 - G
11 - VE

7 - DL
6 - ZL
5 - JA, SV, VK
4 - KL7, OL, SM
3 - F, S5, SP, UA

The other 45 were distributed among countries spotted once or twice.

Some rough conclusions:

1. less than 10% of stations being spotted are known to participate in LotW

2. half of the spotted partipants are US stations

3. less than 4% of non-US stations being spotted are known to participate in LotW (265-135)/3827

Since the known participants are only 60% of all participants, statistics #1 and #3 should be uplifted by a factor of ~1.7 to estimate the overall LotW usage among spotted stations. For non-US stations, thats less than 7%.

73,

Dave, AA6YQ

It also appears that the vast majority of stations are not exactly high on anybody's most wanted list!

2348. Updated LotW database for SpotCollector

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-04 23:53:12 UTC
From: Bill Beggs
Topic: 2346 Message: 2348

I downloaded version 3.0.4 of Spot Collector and the LotW feature does work well. I just used it to work a couple of new band countries.

The downloaded program had a few week old list. HB9BZA and I have been keeping the list up to date in a number of formats. I wrote a small utility to display the contents of the database, but integrating it in to SpotCollector is a better idea. In keeping with our update actions, I decided to add an updated copy of the list data formatted as an Access (mdb) file to my web site http://www.bbcyber.com . It is a free download. The update adds about 100 more callsigns to the list of known LotW users. Next update will be when we get some more additions to the list.

Thanks, Bill. May I adjust the DXLab download page to point directly to your current LotW.mdb file?

A couple of comments:

1. Please modify your web site to instruct users to place the LotW.mdb file in DXView's Database folder (if DXView is installed) or SpotCollector's Database folder (if DXView isn't installed). Most SpotCollector users have DXView installed; both programs will automatically reference the same LotW database.

2. Henryk SP3E points out that the ability to see a list of all known LotW participants for a specified DXCC entity is useful; I will be adding this to DXView.

3. Being able to quickly work new entity-bands and entity-modes is seductive, particularly when you know that the confirmation will arrive quickly. I'm sorely tempted to give DXKeeper (the DXLabs logging application) an "automatically upload to LotW after logging a QSO" option, as I did for eQSL.cc -- but fear that the resulting increase in 1-QSO uploads would have too negative an impact on LotW server efficiency, and so am holding off.

73,

Dave, AA6YQ

Ha
At the rate that LoTW is growing....I don't think THAT will be the cause of server overuse.

LOL

But...saying that, I frequently upload a day's worth of qso's...
maybe 2...???? except for contests of course.

Hi all,

you ever wondered if you have new calls for the users database
but were too lazy to check?

Well, I was. So I wrote a small utility which scans the
lotwreport-file, compares it with the actual users list
and stores the new ones.

See here for details:

http://www.rehberg.de/lotw

This is very interesting, but I find that I cannot open the file in my
old version of Access (97). Is your database dependent on recent Access
features or would it possible to save it in an .mdb format that is
downward compatible with Access97?

Stan,

The file opens quite well with Access 2000. DXLab (DX View) uses
an Access 2000 format database so uploading the file as an Access
97 format file would be "missing the target."

Stan,

Access 2000 and Access 97 databases are not compatible. The formats
are different. The only thing in common is an extension! There is
no such animal as a "downward compatible" Access 2000 file.

If Bill were to distribute his MDB file in Access 97 format, every
user of DXView/SpotCollector would have to have a full copy of
Access 2000 and use the conversion utility before they could use
the file.

2356. Upload Response?

Yahoo group: ARRL-LOTW (2003 — 2007)

From: wo1n
Topic: 2356 Message: 2356

It has been awhile since I've uploaded Q's, last time was 3/27/04. So after converting all my logs over to the DXLABS Suite, I uploaded another 1400Q's Sunday night. They still haven't shown up.

My recollection was the response was fairly quick in the past. I used the LOTW web interface to do the upload.

Anyone know of any reason why these Q's still haven't been counted? Is the system down? Behind because of the US holiday?

Ken

It's because both the Red Sox AND the Yanks have been eliminated....
The system is in mourning.

LOL
Actually I uploaded just a few last night and they showed up right quick.
Make sure you selected 'recent qsos' and not 'recent qsls'.

I just did a check to see if you were in my log. Didn't see you but the whole internet system seems to be slow today, Guess it's all those internet managers trying to scrounge online tickets!.

At one time, DXKeeper had a bug where it would appear to upload logs correctly but actually didn't. The problem would occur if there was an incorrect entry, or no entry, in your login and/or password information for LoTW. According to Dave, if that is the case in the latest version you should get a warning message.

Be sure you have installed the latest version of DXKeeper, then go to the QSL tab of the main window, click the QSL Config button and check the boxes for Username and Password web account. If either one is empty or if you have the wrong information, that will cause the problem you described. It happened to me.

Hope this helps.

73, Bill W6WRT

From: Dave Bernstein
Topic: 2356 Message: 2359

While its true that earlier versions of DXKeeper did not complain if the user initiated an LotW upload without specifying an LotW username and password, neither the username nor the password is required by the upload process; their absence would not have resulted in failure to upload. The username and password are only required by LotW download operations -- which have always alerted the user if the username or password was unspecified.

When DXLab is directed to upload a set of QSOs to LotW, it encrypts the QSOs into a file, uploads the file to LotW, and obtains confirmation from the LotW server that the file was successfully received; this confirmation (or its absence) is immediately reported to the user. If the file upload was successful, DXKeeper sets the LotW_Status of each uploaded QSO to 'U' (for 'uploaded') in the log.

After giving LotW time to process the uploaded QSOs, the user can query LotW to determine whether the uploaded QSOs were individually accepted by LotW. This operation, initiated with a single mouse click, updates the LotW_Status of each accepted QSO to 'Y' (for 'yes!') in the log. Any QSO that was successfully uploaded but not accepted remains with an LotW_Status of 'U'; one mouse click reveals all QSOs in this condition.

Thus DXKeeper provides two levels of confirmation for uploads to LotW. Should an upload fail due to transient internet connectivity problems, the actions of a mis-configured firewall, or a non-responsive LotW server, the user will be immediately and accurately informed.

Dave and others who responded,

I used the workflow suggested in DXKeeper Help files, which suggests that if there are a "large" number of QSO's to be uploaded that they be exported in ADIF, signed by TQSL and then uploaded.

So, other than DXKeeper exporting a selected range of Q's, it was not involved with the upload etc.

I figured once the Q's show up in the LOTW log, I will then do the synchronization of the two sets of data.

I'll drop the LOTW help address a note. Sounds like these Q's are in the Ozone. Perhaps they got caught up in the recent Level 3 / Cogent tiff...

Thanks for your response,

Ken

With the addition of the "AddAll" function several releases ago, one can now easily select large numbers of QSOs for uploading to LotW -- so the advice you cite is no longer valid. I will update the documentation. Thanks Ken!

The issue here was, using TQSL V1.11, although my new certificate
was successfully registered, I apparently forgot to delete the old.
The file must have got signed with the old certificate.

I insured the old certificate was deleted, re-signed the upload file
and it was immediately successful.

I'm not sure if this is a bug or just slightly deficient software,
but the user is directed to manually delete their old certificate
somewhere in the documentation that can be found on the LOTW site.

Thanks go to Wayne at the league for figuring this out,

Ken
WO1N

You're far from the first to fall into this hole, Ken.

The ARRL's LotW website includes a page dedicated to the certificate renewal process at https://p1k.arrl.org/lotw/renew . After listing 8 steps, the following appears:

"When your renewal request is complete, you will see an additional line on your TQSLCert program screen. This will look the same as your existing certificate except that it will have a red circle/bar over the seal. This is your renewal request. When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate."

But that's not how things work with the current versions of LotW software. No red circle/bar ever appears, and the original (expired) certificate never dissappears. The user is left with two-identical-looking certificates that can only be disambiguated by double-clicking and checking dates. If you upload using the wrong certificate, the upload silently fails, as Ken experienced. This is a perfect example of user-hostile software, and will drive away users.

I understand that the LotW development team is seriously short of resources, but to allow this defect to remain uncorrected for months is inexplicable. And if no resources are available to correct the defect, why not at least update the web page to reflect reality?

73,

Dave, AA6YQ

When I log into LotW, on the FIRST PAGE that is displayed after
login, the following appears:

'Aug 23, 2005: Renewing a Certificate leaves the Old Certificate also
-- Here's a hint involved with your current renewals. When using the
latest version of TQSL software (tqsl-111), you must manually remove
your old certificate/private key combo, after renewing. Using this
version, the old certificate is not automatically removed upon
successfully loading the new .tq6 certificate file. To remove the old
certificate, right-click on a certificate with your callsign and
select "Properties" from the box. Check the serial number and the
expiration date. After you find the old certificate, right-click on
that cert and select "Delete" from the box.'

It seems to me that it's been made very obvious what needs to be
done. When I recently renewed my certificate, I read this and took
the necessary steps. Absolutely no problem.

2366. Re: Upload Response?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-13 16:07:32 UTC
From: Dave Bernstein
Topic: 2356 Message: 2366

The "Your LotW Certificate Expires Soon" email message sent by the ARRL to LotW users includes the following:

"To continue submitting log data for this call sign and entity, you must renew your certificate. Instructions for doing so can be found at: https://www.arrl.org/lotw/renew "

This URL contains the faulty information I cited.

A user who didn't save the above email message and is either preparing for renewal, or having difficult with the renewal process will start at the Main LotW page

https://p1k.arrl.org/lotw/default

This page presents a box entitled "About LotW"; within this box are several topics, including "Renewing your Certificates". Following this hyperlink displays the mis-information I originally cited.

The "hint from last August" that you mention, John, is only displayed when one logs into LotW -- an action not frequently taken by users whose logging software automates the uploading of QSOs and the downloading of QSLs. Those users who do login frequently may or may not make a mental note of the updated renewal instructions when they are focused on some other objective; if they do make a mental note, they may or may not remember it when they receive notice of certificate expiration. There is no reasonable explanation for not updating the main renewal page with information that, as you point out, has already been assembled elsewhere.

Including accurate renewal instructions directly in the "Your LotW Certificate Expires Soon" email message would be another helpful step.

73,

Dave, AA6YQ

2367. Need some LOTW Help

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-22 16:09:28 UTC
From: scottpa1960
Topic: 2367 Message: 2367

I posted this on another forum too, with no replies yet (see below).
Also, I just got this in my email. I was trying to get a certificate
for my old callsign WY3X. This is a U.S. callsign:

Processing file 'WY3X.tq5'

2005-10-22 14:14:03 Started processing your New Certificate Request.
2005-10-22 14:14:03 For call sign: WY3X
2005-10-22 14:14:03 For DXCC Entity: UNITED STATES OF AMERICA
(291)
2005-10-22 14:14:03 For QSOs not before: 1945-11-01 00:00:00
2005-10-22 14:14:03 For QSOs not after: <none>
2005-10-22 14:14:04 Your DXCC entity indicates that you should have
a US
callsign.
2005-10-22 14:14:04 Yet, your certificate request contains a
callsign that is
not in the FCC database.
2005-10-22 14:14:04 **Your certificate request contains error(s);
please
correct and resubmit.
==========

After a several month absence from ham radio for the summer, I'm
back on the air again, just in time for November Sweepstakes.
Several months ago I had to reformat my hard drive, and one of the
things I did was to back up my ham files. Last night I reinstalled
my ACL v. 2.8 and got it working. Now, I am trying to configure
LOTW. I installed TQSL this morning, and this is where I'm drawing a
blank. I tried reading directions on the arrl lotw site, but was
even more confused. I found a certs.tq6 file that I clicked on, and
it told me it had expired, so I requested new certificates for my
present callsign, plus my other two I've had in the past. Not sure
how long this will take to process, but I also have some other files
that were saved before the big reformat. I have a config.tq6, a KN3A
file that looks like a folder with a key imbedded in it, and also
another one with one of my old callsigns, that looks the same. I
also have KN3A.tq5 and KN3A.tq6; and my old original call KA3LUW.tq5
and KA3LUW.tq6.

Do I need to wait for new certificates, or can these I described
above be used now? LOTW has always been confusing to me, but runs
automated and never had a problem with Scott's N3FJP LOTW program
built into the logbook. (Does he support eQSL yet? I haven't gotten
that far into v. 2.8 yet)

Scott (KN3A)

I think what you do in this case is to use your current certificate
(KN3A) to sign the certificate request for WY3X. Put in the end-date
for when WY3X was no longer your call.

What you submitted says you currently hold that call, which isn't the
case. Apparently nobody does.

To generate the request, use TQSLcert, File/New Certificate Request.
Put in the proper callsign and enter the valid date range (or at least
the end range.)
Hit next through the address and e-mail screens, and enter the password
for the new private key.
On the next screen, make sure the "Signed" radio button is selected,
and choose your KN3A certificate for the request. Hit finish, upload
the request, and you should get back a confirmation.

Exactly, what is wrong is that the end date has to be there. If you don't put an end date, the next holder of WY3X will not be able to use LotW at all.

From: Joe Subich, W4TV
Topic: 2268 Message: 2375

The problem is that unless you backed up your certificates as
a *.P12 AS DIRECTED IN THE HELP FILE you have not saved your
"private key."

Without the key, you are out of luck and will need to call
ARRL. ARRL (LotW help desk) cannot help you recover your
key, it is gone but they can walk you through the steps of
canceling the old certificate and getting new ones.

If you still have access to the old computer/hard disk, there
may be a way to recover the keys (e-mail me off the list).

Moral of the story for ALL LotW users, immediately after
receiving and installing any certificate, whether it is a new
certificate or a renewal, BACK-UP THE CERTIFICATE! The process
is as simple as:

1) select the certificate,
2) clicking on the Certificate menu,
3) select "Save"
4) follow the prompts.

I have had to rebuild two systems in the last week - one had a
Windows XP corruption problem, the other a bad motherboard. In
both cases, reinstalling TrustedQSL (Logbook of the World) was
as simple as running the tQSL-111.exe installer and then selecting
"Load Certificate File" to reinstall each of my seven certificates
from their *.p12 back-up files.

73,

... Joe, W4TV

2376. RE: [ARRL-LOTW] Re: Moving TQSLCERT to new computer

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-25 00:53:32 UTC
From: rojomn
Topic: 2268 Message: 2376

If you do not have your p12 file you are out of luck!
The other files are useless.
You will have to get your certificate again if that is possible or if the first computer is not corrupted you can save to a p12 file and use that. You need none of the others to transfer to another computer.

2377. LoTW Acct Status

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-26 13:31:26 UTC
From: Jerry Keller - K3BZ
Topic: 2377 Message: 2377

In the ARRL LoTW site under Awards, Account Status, what does the column "Selected" mean? It seems
to be the difference between the "Awarded" and the "Total/Current" columns.... and the "Selected"
QSO's are listed....if I click on the individual bands... as "Pending Credits"... but what is
pending? An example is CY9SS for all bands I worked them on. I can't find any explanation on the
LoTW website...can anyone shed some light on this for me?

73, Jerry K3BZ

2378. Re: [ARRL-LOTW] LoTW Acct Status

Yahoo group: ARRL-LOTW (2003 — 2007)

From: FireBrick
Topic: 2377 Message: 2378

I 'think' it's this way.
Selected means; you chose this particular qsl as the one you want to submit.
(it's possible you received qsls from multiple stations for the same band/mode)
In the 'Your Qso' module, you can choose to 'select' a particular qsl also.

Pending means; (I think) qsls that your previously chose to be added to be Selected. (I think, in the case of only one qsl for a particular band/mode, it is Selected automagically)
If you have gone through the process of submitting these qsls for awards, then they will also be seen in the Pending column until the DXCC desk reviews accepts/rejects them.
After they are accepted, they will disappear from the Pending Column and your Awards/Current will reflect the additional credits.

Awarded and Total/Current can be confusing.
It's because you may have been credited with previously acceptable but now Deleted entities.
In Challenge, which only counts Current, you will see a - in the Total as it's irrelevant.

Boy I hope I got this correct....

2379. Re: [ARRL-LOTW] LoTW Acct Status

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-26 14:53:31 UTC
From: C.M. Christensen
Topic: 2377 Message: 2379

Go into LoTW and click on Awards
Click on Select DXCC Awards Account
Click on Account Credits
Read the notes on the right-hand side of the page.
Then select any award you want and view pending credits, all credits, or
all entities.

In brief, it allows you to look at what you have credited, what you have
worked but not applied for (pending) and what you have applied for that
may not yet be approved by ARRL for credit (also pending).

2380. L.O.T.W. Certificate Submission Status

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-26 17:40:30 UTC
From: scottpa1960
Topic: 2380 Message: 2380

I had to submit a new Certificate as my old one expired. I did this last weekend. I am still waiting for the new one so I can start using LOTW again. Is there anyone I can contact, either voice or email that might be able to help me? I thought I'd get this by now.

I was just on the ARRL website and signed in and tried to get to the LOTW section but I keep getting an error "
Fatal error: initializeLOTWDB: -9807 - Too many users (task limit)"
Thanks in advance.
Scott - KN3A

Scott,
E-mail ARRL at lotw-help@...
They should answer your question or fix the problem of the site.

Update: I received the card in the mail yesterday that had the password on it. Guess what....it didn't work! I sent them an email and awaiting a reply now. Sheesh, I didn't remember having such a hassle last time I applied for LOTW.

2383. Errors

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-28 14:09:01 UTC
From: Steve Harwood
Topic: 2381 Message: 2383

I am trying to help a mate out renew his certificate, every time he uploads the TQ5 file its rejected with the message :-

Certificate request processor result:
Started processing your Renewal Certificate Request.
For call sign: G3VKW
Signing Certificate is not approved.
**Your certificate request contains error(s); please correct and resubmit.
See http://www.arrl.org/lotw/faq.html for more information.

Any ideas what these errors are, I have checked the obvious things like start dates etc..

2384. LOTW Problems? Not me

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-28 19:54:01 UTC
From: Frank A. Lynch
Topic: 2384 Message: 2384

I constantly see all the problems that folks seem to be having with Logs, certificates, renewals, etc.

I must be lucky as I've been using LOTW since it came online. I have my own personal account, as well as three club calls that I upload contests, FD, etc. logs for.

I've renewed all my certificates at least once and never had a minutes problem with anything.

Thought I'd post this message so that any folks that are lurking out there thinking that from what they've read here has discouraged them from signing up for LOTW, there are some of us that it's working just fine for.

I'm waiting for WAS and VUCC to show up!

73,

Frank W4FAL

I use ACLog by N3FJP, and I agree, especially the way Scott incorporated LOTW, its very easy to upload your LOTW contacts. On the other hand, for someone who has never used LOTW, its a real P.I.T.A. as there are many steps to do. I totally understand the security aspect, but when a new user looks at the FAQ section and scratches their head, its no wonder there's not more people using it. I had an issue recently where I was inactive for about 9 months. Hooked everything back up and realized my certificate had expired. I upset N7NG because I didn't realize that the next step after you request the certificate is to wait for a postcard and not some sort of an email. I waited 4 days because I didn't hear anything, nor did I receive confirmation or something saying the next step is the postcard. So, on Wednesday I submitted another request, and on Thursday the postcard arrived for the first one with the password. Well, it didn't work, and it turns out that it was because I submitted the second request.

Bottom line is, lets streamline the steps here. There's just too many steps to go through. This is just my opinion. I apologized to Wayne, but heard no reply. He was just probably glad to get rid of me. Believe me when I say the steps need to be spelled out better, or eQSL will continue to be the alternative.

~~~~~~

Your opinion is shared by many, including me. The whole purpose of computers is to automate procedures so humans don't have to do them. ARRL has apparently lost sight of this and accepted a system which requires far too much human intervention. It would appear that ARRL is not going to try to fix it either. I emailed my division director with just this sort of comment and he didn't even acknowledge the email, never mind offer to look into it.

I do not have much hope for LoTW even though I have uploaded over 50,000 QSOs so far. It's too bad because the basic idea is a good one.

I have said that since day one and sent comments but they always say it is for the sake of security. That is RUBBISH, it can be secure and simple. It requires a better design. Complexity is not acceptable, but they won't ever fix it it seems to me.

2389. Re: LOTW Problems? Not me

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-29 18:36:05 UTC
From: Dave Bernstein
Topic: 2384 Message: 2389

The test of user-friendly software is not "some users have no problems", but rather "few users have problems". Yes, logging applications can do a lot to hide the complexity associated with sending QSOs to LotW and tracking both their acceptance and their confirmation. However, the current renewal situation -- where the latest release of TQSLCERT contains a serious defect and the web site instructions are dead wrong -- is a significant problem for many users.

Supporting additional awards and providing programmatic access to user DXCC account information would increase the value of LotW to users, assuming these capabilities were supported by logging applications, but the startup and renewal processes must be simplified, or at least facilitated by wizards (software applications that walk the user through a process step-by-step).

The holdup here is development resources. As long as one small team is charged with both operating LotW and improving it, progress will remain glacial. If you're a member of the ARRL, speak to your representative about constructively addressing this problem!

If someone has another secure, identity validation and authentication with authorization procedure that is more automated, then why don't you toss it out here for them to see. If it makes sense and allows an easier set of steps, then I'd bet there could be some steps taken to get things heading in a direction of simplification.

The big issue is, for me, is what level of identification validation and authentication are you willing to let control the exchange of cards. If you just want to trust people for who they are, then there's a big gap between that, and what the ARRL is apparently content to accept.

At some point, the value of the card exchange is diminished by the quality of the data used for the exchange. That is currently, to me, the controlling factor in the authentication that is in place now.

Debating LotW's approach to security and authentication is an academic discussion. For better or for worse, the system is built and operating. Even if the ARRL were open to relaxing security to improve useability, there are clearly no resources available to undertake such an effort. When a serious defect that complicates certificate renewal has gone uncorrected for months, there's no one able to come off the bench to tackle big issues. Promised support for awards other than DXCC is also delinquent.

I don't think LotW's data quality issue has anything to do with authentication. I'm not seeing bad data because nefarious users can populate LotW with bogus data, I'm seeing bad data because authorized users can erroneously enter bad data without LotW raising a red flag. Given its knowledge of a user's location, for example, LotW could easily flag the reversal of CQ and ITU zones so often encountered.

2392. Re: LOTW Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-30 12:27:19 UTC
From: Carl Smidt
Topic: 2392 Message: 2392

It is my opinion that the continuing debate over the pros and cons of LoTW gets more detailed and involved than the actual uploading/downloading of data to/from LoTW.

Being a non IT, 70 year old geezer, while agreeing with some of Dave Bernstein's and other's comments about the ARRL's slowness to react to the presently known problem areas, I still don't understand why so many have problems with the system.

Before the presently established logging programs caught up with LoTW, it was just a matter of sending an e-mail to the ARRL with ones, properly formatted, qso information and it was entered into the system and confirmed back to the sender.

With the presently available logging programs, that now becomes a 'snap'.

The annual renewing of certificates, while slightly irritating, is not really all that difficult either.

All one really has to do is print out the instructions on the subject from the ARRL LoTW web site and follow them point by point.

I have renewed three different calls in the past, several times, and I can't agree that it requires a detailed knowledge of computer science; nor, that it borders on rocket science.

I believe that if our fellow Hams would be willing to read instructions and experiment a bit, in the old spirit of Ham radio, their difficulties would be quickly resolved.

Perhaps, if a Ham/Computer Programmer (living in the ARRL HQ area) would volunteer some of his/her time to resolving the issue, things could be worked out in a satisfactory and timely fashion. The ARRL has lots of volunteers helping the membership, maybe it could be made to work the other way around? A thought!

I believe that these continuing discussions, of a lamenting and overly critical nature, discourages too many Hams from even attempting to use the system; hence the dismal lack of participation.

I am still experiencing a QSL return of less than 5%; sad.

If you have an existing certificate, you shouldn't have to go through
the postcard routine again.

AMEN Carl:

I have been on LOTW almost since the very beginning, and have never experienced the massive problems complained about in this reflector. I use N3FJP's AC Log, and it's a piece of cake to upload log data. My confirmation rate runs around 12%.

2395. Re: LOTW Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-30 20:50:56 UTC
From: scottpa1960
Topic: 2392 Message: 2395

Mike,

I use N3FJP ACLogger myself, and it is seemless to upload to LOTW. Scott has done a wonderful job. And, he is also very quick and eager to help out when he can.

My gripe is how tough it is to set up LOTW in the first place. All the security steps, and how vague the FAQ section is for a new user. Its absolutely absurd. I think they need to really evaluate and make up some step by step instructions instead of looking through several pages of FAQ's online.

Unfortunately, that's not the case. If you let your certificate expire, you must go through the postcard exercise to get a new valid certificate. There's no reason that we couldn't have a "grace period" for these requests.

There are some real usability problems with LoTW. It works for me, but there are people having problems that need to be fixed. Let your Division Director know that the League needs to support LoTW and get it moving.

I'm wondering if there's anything that volunteers could do to help with coding - I'd be happy to help, and I know there's others as well that would volunteer given a chance.

Could you please describe what you consider to be tough, and what's not included in the "Getting Started" page on LoTW? Perhaps we users could rewrite the directions. There's really only four steps to getting set up, so I'm having a problem with seeing the difficulty. (Of course, this material may not have existed when you first set up LoTW.)

2398. Re: LOTW Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-10-31 01:53:37 UTC
From: Dave Bernstein
Topic: 2392 Message: 2398

Here's the results of a quick review:

1. the instructions are only available in English

2. the instructions use the word "certificate" without ever saying what one is, how its used, and when its appropriate to have more than one; a similar point applies to the verb "signed"

3. a consistent nomenclature is not used to clearly distinguish among the three different passwords that any one user must manage ("post card", "web account", "private key")

4. imprecise, inaccurate language, for example

"You will be prompted to save the certificate request file (the file name will be .tq5. Make sure to keep track of the directory in which you save the certificate request file for the next step! After you hit `Save,' a message will appear telling you to email or upload .tq5 to lotw-logs@... "

A more accurate and understandable (to English readers) version of this would be

"You will be prompted to specify the name to be given to the generated certificate request file, and to select the folder where this file should be placed. The suffix of this file's name will be tq5; 7O1DX.tq5 or MyRequest.tq5 are both acceptable file names. Write down the name of the folder containing your certificate request file, as you'll need it in step 2. Now click the Save button; a message will appearing suggesting that you email the certificate request file to lotw-logs@..., or upload it via [URL]."

Here's another beauty:

"Once that's done, TQSLCert should show your certificate in its certificate list. When the launch is complete you will see a message that says the program has loaded three certificates. This is normal. Subsequent requests for additional certificates will deliver messages of two, or one certificate being installed."

5. Step 4 fails to mention the optional use of a password to protect the file into which the certifcate is saved, does not mention the suffix associated with this file (.p12), and does not provide a pointer to instruction for recovering the saved certificate

6. Step 5 might mislead a user to understand that secondary certificates are only used for portable callsigns; it does not

mention the more common case of having held more than one callsign

7. Step 7 does not mention the importance of entering accurate
information in the station loaction, or provide pointers to sites
that would help the user do this (e.g. CQ and ITU zone maps)

73,

Dave, AA6YQ

My previous comments about useability and insufficient resources notwithstanding, I suspect that the dissappointing worldwide adoption of LotW is largely attributable to other factors:

1. the instructions and TQSL software are only available in English

2. authentication is more demanding for non-US amateurs

3. there are no incentive programs (e.g., "all ARRL-assisted DXpeditions must upload their logs to LotW")

Bill, et all,
I have to agree with you about the ARRL
letting us down. I followed your
suggestion by voting against the incumbent!
In a letter dated January 28, 2005;
"Thank you for your club's ARRL affiliation
application. We are referring the application to
your ARRL Division Director and ARRL Section
Manager for review and endorsement. With the
approval and endorsement, you club will then be
nominated before the ARRL Executive Committee
(EC) - about every 6 to 8 weeks, the EC considers
a batch of paperwork for clubs."
As of today, I have received nothing regarding
the application! I have emailed Norm Fusaro twice
and received an "out of office" reply, but no
other acknowledgment from them.
If this is how they treat their "bread and
butter" membership, then LoTW is just a "poor
stepchild"!
What does it take to get their attention?
Lance WN0L

You have summarized the situation perfectly.

That's a big problem that'll need volunteers to fix. Or money for translation services; please tell your League rep.

>2. the instructions use the word "certificate" without ever saying
>what one is, how its used, and when its appropriate to have more
>than one; a similar point applies to the verb "signed"

While there's some reference to this in the FAQ, it's incomplete and inadequate. No definition of "public key", "private key", and many other terms. There's rationale for why PKI is being used, but it's inadequate to describe what I think is the real goal, which is to ensure that any log can be tracked back to an individual. What little info provided assumes that everyone understands public key technology, which isn't true.

>3. a consistent nomenclature is not used to clearly distinguish
>among the three different passwords that any one user must manage
>("post card", "web account", "private key")

Again, a good call - reliance upon the user to remember and distinguish three separate passwords is a bad idea; changing LoTW to use a different term on the postcards would help with one case, and calling the private key password something else would distinguish the remaining cases. For example, "callsign unlock code" for the postcard and "passphrase" (once the term is defined) for the private key could help disambiguate the three cases *as long as they were consistently used.

Agreed, this is unclear. Too many assumptions and not enough instructions.

No argument with the above. For #7, It'd be interesting if there was a
US ZIP code to zone database that could be used to vet user input, but
it'd just be another source of complaints. I personally had no idea
what zones my home were in until filling out my first LoTW certificate
request; there's gotta be a lot of others in the same state or who
would be very unhappy when the LoTW program tried to correct them. (I
know that my QSL card has the wrong grid square as it's the grid for
the center of town, not here - my GPS can tell me the correct grid.

Should LoTW be verifying at this level?)

Ok, there's some real problems here. How do we help get them fixed? Or are we all willing to just bitch about this and do nothing?
(Dave, please don't take this personally as I know you are helping and writing software to help hide some of the problems.)

2406. LOTW Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-01 16:54:30 UTC
From: wa5yom
Topic: 2392 Message: 2406

A few months ago I was going to download my latest QSO's and I got an error that LOTW could not find my certificate, (error was : "system error, permission denied") or something like that.
It is the second time in a year that I have had this problem. The last time it happened I had to request a new certificate.
This time the new certificate did not fix the problem. I talked to the ARRL on numerous occasion to no avail. The final response was that it was an XP problem.
A lot of good that does me; I had to just give up. The last thing I was going to do was reload my entire operating system in order to attempt to fix the problem.
The whole certificate process seems to allow little room for error.
Anyways, I am dead in the water and guess I won't be able to use LOTW.
Any suggestions?

Thanks,
Tim

Try to use your certificate on another machine. Try it on a machine where someone is successfully using it. If it does not work there and the other does you have proved it is not XP. Get back with ARRL. It would be hard to believe they have no interest in that!

2409. LOTW down again

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-01 20:59:21 UTC
From: James M Punderson IV
Topic: 2409 Message: 2409

(written 10/31/05)
Yes, this is a very, very common problem and when it is down, it is usually down for hours with no status reports on the web site and no during or after-the-fact explanations. Leaves the users to wonder if they were doing something wrong. If the problem is hardware, good servers are just not that expensive.

I personally think the LOTW is a wonderful idea and even as messed up as it is now, it has been extremely valuable to me. Of my approximately 3000 QSOs this year, over 27% (800 and change) have been confirmed including 62 different DXCC entities. (I'd give you the exact numbers but--tada-- the system is down.) (I'm a life member of the ARRL too so I'm neither an enemy of LOTW nor of the ARRL.)

Services limping along like LOTW is right now have to get better or die. When a critical mass of hams around the world have decided that it is not for them on the basis of either their own personal experience or what others have told them, it will be EXTRMEMLY difficult to get them to change their minds later. That's the risk of continuing to operate at the same level of convenience and functionality we have now.

Dave Bernstein and other logging software authors are doing their very best to work around the very rough edges of LOTW but it's very hard to work around things like the system being down and certificate renewal instructions that are just plain wrong and don't get changed. And it's even harder to work against the fact that LOTW confirms are useful for much despite all the talk to date.

Because currently LOTW is only useful for DXCC and Challenge awards that means it is completely useless without adequate foreign amateur participation. You would never know that by visiting the LOTW site.

So Dave Bernstein is exactly right on to point out the lack of support for those who speak other languages. And Dave is also right to point out the "baffle-gab" of the English instructions which makes them doubly hard to comprehend for those whose primary language is not English. Fixing these two problems is not expensive if volunteers can be found. Any why not get links and instructions on the sites of other radio societies and clubs around the world?

My business is running a web-based service just like LOTW is and if I ran it the way the ARRL is running LOTW, my customer base would be getting smaller and not larger. It's a darn good thing they aren't charging for uploading logs because you can get away with crappy service for longer when you aren't asking for money. But not forever

and not if the service doesn't become more useful.

LOTW and the other big electronic QSL system, eQSL remind me of the American Football League and the National Football League, of the AFL and the CIO in that it makes sense for them to get together and figure out how to merge or at least interoperate to some extent.

And on the other end of things, ARRL needs to work harder at getting LOTW confirms accepted for other awards to broaden the base of interested users. And some serious overseas "product evangelists" in each country to both demonstrate the value of the system and help get people going on it. Once a enough people in each country are users, they can help other would-be users but the seeds need to be planted.

I would suggest that if the LOTW folks are in need of additional equipment, personnel, volunteers or whatever to get this show on the road, then why the heck don't they come out and say just what it is that they think they need to do it faster and better. ARRL is constantly asking for donations to support spectrum defense - why not for LOTW if that's what's needed. Maybe it's time for the ARRL to do a little customer research and ask the users what the priorities should be?

OK, I feel better now... <g>

Really cool. You try to get people into LOTW and then for two days after the biggest contest of the year the site is down.

This is a great question to ask a lot of people. Maybe someone can setup a poll on this group that everyone could respond to to see how many people are having problems. The squeaky wheel makes a lot of noise. But, if there is a real problem, that is impacting a lot of people, a simple poll might help make the numbers more real so that the right next steps could be taken.

Personally, I have not had problems managing my call and my clubs call.

No, like I said in an earlier post, I've been using LOTW and eQSL
since their inception with virtually no problems. I use DX4WIN as my
primary logging program and have also imported FD and other contest
logs from various other contest logging programs.

Greg,

Same experience on this end. I've been using LOTW since the beginning with
no problems period managing 4 certificates.
All seems to flow seamlessly. Running Windows XP on one machine and Windows
ME on another. Logging with DXbase 2006 while my contest software is
Writelog.

System has been unavailable again today for about the last 50 minutes...

So either the system has insufficient capacity for even the tiny percentage of the amateur radio world that uses it or the hardware/software used breaks down frequently.

My guess is the system lacks adequate capacity. Hopefully it's hardware capacity that is the problem because that is usually faster and easier to fix.

Emails sent to HQ are bouncing too. I fired off an email to my Director. Here is his response:

"The Internet email link with SBC Communications has been down for most
of the past day or so. I has created real problems but SBC assures HQ
"their working on it." With any luck they should have it fixed
tomorrow."

Anybody who has tried to run an ISP would tell you, "problems" often occur upstream from the main server and
can cause all sorts of havoc. More often than not, all sorts of issues outside the organization can cause the problem. It's not always the 'fault' of the server, or the people running it. And about all you can do is wait until somebody fixes it.

Problems with name servers, denial of service attacks, hackers, who knows. Patience is a virtue.

For the curious, you should use the "tracert" command on your windows machine,
or the "traceroute" command on a unix machine to see what your route is to LOTW
and/or what is not working today, e.g.:

tracert <machine name>
or
traceroute <machine name>

The trace route mechanims sends out ICMP echo (same as the ping service) with
increasingly longer TTLs. It tells you which machine, if any replied for each
TTL value. When LOTW is working for you, use trace route to find out what path
is working, print it out or something for reference. When LOTW is not working,
do the trace route again and see what is not working.

The internet system is made up of literally thousands of routers. Any one, can
put a cramp in network traffic if the route it is on does not have a backup
route. The internet was design with support for alternate routes from the
start. But, some of the lower cost services can charge less by having less
robust routing. The network is made up of a graph structure which causes
certain routes to go in certain directions at various places in the network.
This can allow you to use some internet sites, but not others when a router is down.

I don't have any first hand knowledge of the dependability of the LOTW system
machines. So, without that, it's hard for me to say where the problems are that
some are experiencing. But, the above procedure might be informative to you if
you are interested.

Almost; traceroute sends UDP packets instead of ICMP by default.
The effect is similar though.

Unfortunately some ISPs block ICMP ping traffic, meaning that ping won't
work. Some web sites do too. traceroute will often still work in those
cases.

LoTW was never really down the last few days
at least here
but....
it was slower than molasses
there were times I just clicked off instead of waiting.
and that went for almost all the sites I tried to visit yesterday

my normally fast 10 meg connection was worse than dialup

I suspect some routers somewhere got trashed???

Humm, my memory has failed me. You are correct, it does send UDP packets addressed to a rather high numbered port, in hopes of not interfering with existing UDP based protocols, based on what I found to read. Its the ICMP-TimeExceeded that I was remembering as being the ICMP part of the protocol.

Never-the-less, this is a good way to see what is happening on the network, when the intervening routers are not unduely restrictive on the traffic the allow to pass. Typically, it is routers near the destination that start to tighten the noose and restrict you from seeing what is happening.

Also, windows tracert supports the "-d" argument to tell it to not try and do reverse DNS lookup of ip addresses to show you names instead of ip addresses. Adding this to the command line will make it go a lot faster. On Unix, the argument is the same as netstat supports, "-n".

Thanks for the correction Hamish!

2427. Down Again revisited

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-04 20:14:15 UTC
From: James M Punderson IV
Topic: 2427 Message: 2427

Perhaps I need to clarify something. When I said LOTW was down, I did not mean that you could not get to the place where the link on the home page of arrl.org leads you to when you click on it: http://www.arrl.org/lotw/

But it was not possible to log into and use the LOTW logbook itself which is located at https://p1k.arrl.org/lotw/default. Access attempts to it via logbook software as well as browser software failed with "timeout" messages.

I set up a monitor yesterday and the p1k LOTW server was unavailable again from about 8:15pm EST to 10:30PM EST. It could not be pinged nor could it be logged into.

For those who think perhaps something is wrong with my Internet connection, we have an 8 T1 wide (12 Mbs) connection to the ATT backbone. If there was something wrong with that connection we would have heard about it from the 100,000 users who access our site for email and other services.

Earlier yesterday then when I first set up the monitor, there was a planned service interruption (I say planned because access attempts yielded a message from the site saying access was temporarily not available - that is quite different than the site being off-line altogether).

Today so far as of 2:15PM EST, the site has been up and available all day.

I don't think this changes anything.. www.arrl.org and p1k.arrl.org
appear to be hosted in quite different places and indeed the route to
them from Australia is very different. Thus the network to one could be
down while the other is up.

From: scottpa1960
Topic: 2429 Message: 2429

I've been very critical of LOTW mainly because the instructions are basically non-existent. Not very good for those of us who like the step by step instructions written like "LOTW for Dummies" format. I also agree if we want foreign hams to start using LOTW, instructions also have to be in other languages, french, german, italian among others.

Here's my positive thing though. Thankfully I had uploaded my logbook to LOTW before going inactive for the summer, as I had to reformat my ham computer a few months ago and had no complete backup copy of my logbook. Well, when I finally reinstalled everything a couple of weeks ago and got my new certificates for LOTW, when I signed in, I was able to retrieve the missing contacts for the logbook.

Thanks LOTW for having this ready for me!

2435. In spite of all the carping....

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-11 16:31:06 UTC
From: K0HB
Topic: 2435 Message: 2435

I've been as guilty as anyone of complaining, but in the spirit of "credit where credit is due"......

After just about 24 months since my first submission, I currently show just under 4,100 QSLs at the LoTW web site. In the mix there are enough 'cards' to qualify me for DXCC, 5BWAS, and probably a fairly high number at 'County Hunters'.

---That's more than ALL the paper cards I've gathered in over 43 years of hamming.
---The cost of these 'cards'? $0.00

I still have a great fondness for paper cards (see my QSL at http://www.home.earthlink.net/~k0hb), but LoTW certainly is a welcome complement for the serious paperhanger.

Subject: [ARRL-LOTW] Carping

I agree with Hans. In spite of all of the negative comments the system
when working is pretty good. However, let's not loose sight of the fact
that through "complaints" and "comments" will come improvements. It is
hard for me to voice a complaint without suggesting a solution but my
knowledge of the inner workings of the system does not allow me to do
so.

At this time I have 72,390 QSOs in the system with 8,812 QSLs. That is
12.2% confirmed. While that is a bit above average it still shows that
we have a long way to go to get more people on LOTW. I have voiced my
concerns to my Division Director and would suggest others do the same
rather than just post them here on the reflector.

2438. RE: The "Carping"

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-11 18:12:26 UTC
From: Phil Cooper
Topic: 2436 Message: 2438
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

As a non-USA station using LoTW, I find the service invaluable for gaining confirmation of some calls that are, and always have been, difficult to get confirmed in the usual way.
As a keen contester, it saves me a lot of repeat-QSL'ing, although it has not eliminated it entirely.

My stats are a little less than some that have been quoted, but as of today (with a few contacts yet to add to the system) I have 37518 QSO's logged into LoTW, with 7142 confirmed.
This is a fraction over 19%. Quite pleasing!

I have all too frequently seen folk moan about this or that, but this isn't always productive.
It may be better to offer suggestions, which may or may not be taken up, but at least you will have raised a point, and maybe some kind soul at ARRL will take some note of what is said.
Simply berating the LoTW service for not doing this or that is not helping anyone.

From a "DX" perspective, I quite often hear comments about the joining up process being too much for folk to handle.
NO IT IS NOT!
However, it does beg the question as to whether it would be possible for those ARRL guys that check cards at various exhibitions could possibly sign up some of the visitors?
Friedrichshafen, Dayton, and the RSGB HF Convention spring to mind.
Maybe this IS done already, I don't know, but any way you can increase usage is worth the hassle.

I have noticed that the LoTW site has been unavailable several times recently, so does that indicate extra activity?
I seemed to note that the few days after CQWW SSB was rather busy!

So, well done ARRL, and thanks for an excellent service!

Yes I did. For one I suggested a committee of some users (contesters, dxers, general ops) to provide some feedback. Secondly I suggested that there might be a moratorium on all fees to encourage use. Third I suggested much more publicity. While Ward's article in QST was good it left out several major points in dealing with LOTW. Lastly I suggested participation from some non-USA stations and preferably non English speaking to see if there could be a way for them to enter.

Hard to say. However, I know that some contesters don't upload to LoTW or eQSL until after the contest entry deadline. They figure that doing it early would permit people to gerrymand their logs and remove Not-In-Log (NIL) QSOs.

Actually, I have an example of the opposite. Back during ARRL DX CW, I worked an EA1 on 80m. I have an LoTW confirmation, but when I got my log check report for that contest (all 21 QSOs), that one was marked as NIL! Go figure....

wrote the little program that allowed you to access various LoTW pages?

I lost it in my transfer from old to new computer.

It was a number of links that were really shortcuts to the different menu selections.

please and thank you.

Bill H. in Chicagoland

I guess it just shows...if someone can't spell a 3 letter word correctly but still get a ham license...there is something wrong with the system, and I don't mean the LoTW system.......

I worked a new band/mode on 80 meters last night, and told the person I would need his qsl and would upload to LoTW.
Sure enough, this morning his LoTW QSL was waiting for me.

Please don't flame someone because of grammar and spelling. I didn't put in the callsign to protect this person. Why are you assuming this person can't spell because of the school system in the U.S.? Maybe you should consider this person was attempting to use the english language instead? The hobby of ham radio is not limited solely to U.S. born and bred people. It is an international hobby. I submitted 135 QSO's that I worked on the WAE RTTY last night. So far its about 20% return, which is pretty good, but none from other countries yet, which is a sad thing.

Scott

2449. LotW user callsign database

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-11-17 16:22:01 UTC
From: Bill Beggs
Topic: 2449 Message: 2449

The LotW user callsign database has been updated. Known callsigns that have had logs uploaded now total 9964, representing 274 countries, as of 11/16/2005.

During the last month, additions to the list of known users have been greater than two DX callsigns for every one US callsign added. This only applies to known users. An actual LotW users listing is not currently available from LotW.

Updates for the web-based searchable database, LotW User Query utility, and DXLab's SpotCollector are all available on the http://www.bbcyber.com website.

This database is maintained by Robert HB9BZA with database formatting and updating by Bill, N5RR. Both of us can receive new known user callsign information and have them included in the next update. The listing is updated, on the average, about every two or three days.

2450. LoTW and Contesters

From: FireBrick
Topic: 2451 Message: 2453

I mean...I have received a LoTW notification that my qso with R1MVI was confirmed and is eligible for submission for award credit.

R1MVI has submitted to LoTW a logged qso with me for that time, date, band, mode etc.
And it matches the qso with R1MVI that I submitted.
We have a match and LoTW has informed me that the qsl is acceptable.

These two were sorely needed band/mode confirmations.
YB0JIB via bureau, Thanks John, for the 17 meter rtty qsl.
TK/DL4FF via bureau, Thank Vaclaf, for the 17 meter ssb qsl.

These five, were hardcard qsls for already received LoTW qsls.
Seems they are belt & suspenders types.
Of course I will reply via bureau.
UR5FAV via bureau,
FM/JJ2RCJ & FG/JJ2RCJ via bureau,
JM1XCW via bureau,
DL1YD via bureau

What are the lyrics to that song?
"I don't care how you get here...just get here!"

thanks to all

Just received this from our ARRL director:

LoTW is scheduled to become accessible for the WAS
family of awards by
early January at the latest. It is anticipated that
still additional
ARRL as well as non-ARRL award programs will be
available through LoTW
later this year.

That's GREAT news!!!

Nice timing too - I just worked the 50th state on RTTY with 47
confirmed in LOTW.

Nice to see that type of progress being made. The more awards the
system is good for, the more users will use it. The more users that
use it, the higher the percentage of confirms will be for everybody.

I don't know about great news. That seems like a further delay to me. When I asked about this back in September, I was told "end of year". Of course, six months before that, I was told, "end of second or third quarter." Early January seems later than "end of year".

Since I do software development myself, I can fully appreciate the difficulty of bringing an application like this on-line. However, given the severity of the slippage so far, allow me some level of skepticism.

From: Joe Subich, W4TV
Topic: 2456 Message: 2460

Knowing that the development at ARRL is being done by one person
who's primary duty is supporting all IT, administrative and
publishing systems, that one of the Directors is on record saying
that WAS will be ready in January is great news.

That generally means that the systems are already being tested -
particularly given the relatively few "working days" between now
and the first part of January.

Topic: 2461 Message: 2461

CN2WW via LoTW, multiple qso/qsls.
Thank you, I needed the 17 rtty qsl credit.

Windows Error: 002 - No error yet ...

Bill H. in Chicagoland

2462. received today: OH2BU/MVI

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-12-05 15:12:09 UTC
From: FireBrick
Topic: 2462 Message: 2462

OH2BU/MVI via LoTW
Thanks for the 1995 qso.

2463. Re: [ARRL-LOTW] received today: OH2BU/MVI and more ...

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2005-12-05 20:46:52 UTC
From: Jari Jussila
Topic: 2462 Message: 2463

That's right BIll ...

Uploaded a couple of days ago the following DX pedition logs:
- XF4L 1989 (16.000 of 48.000 QSO's,
508, matches/QSL's so far)
- OH2BU/MVI (1995) (9.000 QSO's, 280
matches/QSLs so far)
- R1MVI (1995) (9.000 QSO's, 425
matxhes/QSL's so far)
- 4J1FS (Malyj Vysotskij, 1992) (74.000 QSO's, 1904
matches/QSL's so far)

and will upload after a couple hours
- 4J1FS (Malyj Vysotskij, 1991) (23.000 QSO's).

The earlier:
- YS1X El Salvador (24.000 QSO's, 2358
matches/QSL's so far)

- The XF4L uploading includes only the U.S. prefixes starting with A, N, K
and W and prefixes starting with E, F and G. Those are the only electronic
files found. I have the full paper logs of all 48.000 QSO's, however.

- The Malyj Vysotskij -files/logs (OH2BU/MVI, R1MVI and 4J1FS) had problems
with the time. I remember that for some reason there was a offset of some
45 minutes (which is more than the 30 minute limit LOTW accepts) in many of
the QSO's and in some QSO's a 7 hours offset because of wrong parameters
when using the old Excel time parameter.

- If you have already a paper QSL and can't find the QSO from LOTW, try
using and uploading the date and time in the paper QSL. If that doesn't
work out, I can check the log and upload the QSO's for you again.

Jari, OH2BU/OH7RF

Art,

With all due respect and the overall support of the idea of LoTW as you know well, let me respectully disagree with you.

An essence of the HAM spirit requires every amateur to reply on any QSL request he receives. A QSL request means, somebody needs this card. Any condition put on the way of receipt of a card puts the HAM spirit under a question mark...

Sorry to be quite tough this Holiday's time.

Merry Christmas to all listees,

If I upload my logs to the LoTW that means I want these requests to be
confirmed.

VVS> A QSL request means, somebody needs this card. Any condition put
VVS> on the way of receipt of a card puts the HAM spirit under a
VVS> question mark...

Does that concern LoTW "requests"?

MC/HNY :)

Actually I believe this is a myth. I have just made a test with a bunch of latest cards from my table, 41 - labels printed, 43 - handwritten. 5 of that 43 - RTTY contacts made with computers. 19 of 38 remaining - contest contacts, I bet computer logs were used. A half of 19 remaining cards have e-mail address on them, though it is not a direct evidence. So I think at least 90% of active hams have computer logs.

~~~~~~

I do not collect paper cards, so if someone wants a card from me,
they must send me a SASE, just as I would with them. I make thousands
of QSOs each year and receive hundreds of cards. I think it is an
imposition to expect me to pay postage for their benefit. It's enough
that I pay for printing the cards, don't you think?

LOTW is the way of the future. We should discourage paper cards as
much as possible. We should also find ways for non-computerized
stations to submit and receive LOTW credit, either through a radio
club or some other means. Paper cards served a good purpose in the
past, but in this age of the internet they are rapidly becoming out of date.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who
award it a 2.8

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was transparently written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 3.0 for the sheer abrasiveness of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

> We should also find ways for non-computerized stations to submit
> and receive LOTW credit, either through a radio club or some
> other means.

A nice idea, but doesn't pass the taste test of reality. Operational radio clubs are scarcer by the week, and few are organized enough to collect logs/submit logs/and all the other administrivia such a project would entail.

> Paper cards served a good purpose in the past, but in this age
> of the internet they are rapidly becoming out of date.

Same could be said for a lot of my favorite things, perhaps including ham radio itself.

So what! I still enjoy it, and I still thoroughly sending and receiving paper cards, even though all my logs back to 1975 (soon all the way back to 1958) are on LoTW.

Merry Christmas to all, including the Grinch

Bill,

The yours truly is a honest fan of LoTW. Moreover, I can call myself a promoter of LoTW of a kind, and Art can confirm that. And I also make thousands of QSOs each year and, to be honest, also don't really like to process received cards. In the meantime IMHO, people should not be DISCOURAGED to use paper cards. Instead, people should be ENCOURAGED to use LoTW. The moment they understand, the LoTW confirmations are easier and cheaper, they will cut the paper cards' turnover themselves.

Until it happened, my personal principle is, any received card should be answered the way it is received, i.e. direct reply on a direct request, and a bureau reply on a bureau request.

A promotion of LoTW is another story. But Gents, let us the LoTW fans be careful, by quick unthought decisions we might create an allergic reaction on LoTW as a whole.

73,

Vladimir EU1SA
65k QSOs in LoTW, 6.7k LoTW QSLs

You can send it by railway, you can send it by trailway
You can send it on an airplane, you can send it with your mind
You can send it by caravan, cross the desert like an Arab man
I don't care how it, just - get it here if you can

You can send it by sail boat, climb a tree and swing rope to rope
Take a sled and slide down the slope, into these logs of mine
You can jump on a speedy colt, cross the border in a blaze of hope
I don't care how it gets here, just - get it here how you can

There are hills and mountains between us
Always somet'in to swim or cover
If I had my way, surely you'd be closer
I need to know you sent it over

It can windsurf to my log, send it on a carpet ride
It can make it in a big balloon, but you better make it soon

You can send it by caravan, cross the desert like an Arab man
I don't care how it, just - get it here if you can

I don't care how, just -- get it here -- fast as you can

my apologies to Oleta

Nope. The QSL "is the final courtesy of the QSO." Just think if all those guys whom you work every year suddenly stopped working you if you don't QSL. Your contest scores would go way down.

I QSL 100%. It may take a while to get a card back if there's no SASE, but they will eventually get one back.

LoTW is the future, I agree, but paper QSLing will have a place for some time to come.

Have to agree that electronic QSLs are the future, I do believe there will always be a place for paper QSLs.
I handle one of letters for ARRL buro and the amount of cards seems be be down, but whether it's due to poor propagation or electronic QSLs is anyone's guess.

As for LoTW, think it's a good idea, but two attempts to get it working here ended in failure. Threw out program in disgust, but joined this list in hopes of finding out what I may have done wrong. Will probably make another attempt after 1st of year as time permits.

Nope. The QSL "is the final courtesy of the QSO." Just think if all those guys whom you work every year suddenly stopped working you if you don't QSL. Your contest scores would go way down.

I QSL 100%. It may take a while to get a card back if there's no SASE, but they will eventually get one back.

LoTW is the future, I agree, but paper QSLing will have a place for some time to come.

Had a '63 Incognito once Bill. Great gas mileage, but a pretty average looking car, and I kept losing it in large parking lots because it was hard to recognize in a crowd.

You can meet me on my web site, URL below. Nice fish, huh!

I finally made a QSO contact with R1ANN. If you saw my station, you'd ask yourself how I was able to ever complete the QSO. Band has been in the best shape its been all winter so far. Anyway, I looked up his callsign on qrz.com and it says to qsl via RZ3DJ. I don't even know if RZ3DJ is registered with LOTW. I've had other examples of QSO's where I am to QSL via another callsign. How can this be accomplished?

Thanks,
Scott KN3A

I think you should just submit a QSO record for R1ANN as normal.
RZ3DJ as manager should have a certificate registered for R1ANN so that
they may upload R1ANN's logs.

73, good DX.

Dear Readers.

It is all very well promoting LoTW and discouraging the use of 'paper'
qsl's

BUT

Until LoTW does more than add up your totals for DXCC - forget it.

I am aware that there are promises for WAS to be incorporated, and
'thoughts' about IOTA - but be honest it will only really take off
when more than 50 percent of The Worlds Awards are supported by it.

Happy New Year

I just spent a week in Maine and operated and was signing my call as N7TY/1. I have just uploaded all my logs to LoTW and signed the log using the information from the portable QTH. Is there going to be an issue confirming QSOs with the stations I work if they submit their QSOs with me as N7TY/1 as opposed to just N7TY, will they still match?

I'm not sure what you mean by "signed the log using the information from the portable QTH."

If you have a certificate for N7TY/1 and you used that certificate to sign the logs for all your Maine contacts, those who upload a log with your call as N7TY will not match.

If you only have a certificate for N7TY and signed all the logs using that certificate, anyone who submits a log with your call as N7TY/1 will not match.

The best bet, to cover all your bases and have the minimum number of disappointed hams that want your QSL: make sure you have LotW certificates for both N7TY and N7TY/1 and upload the Maine logs twice, one time signed with each certificate. Then, regardless of how your contacts choose to log the QSOs, they will get their confirmation.

Hope this helps.

If you open TQSL program, you can add station locations, STATION => ADD LOCATION. That is what I meant by "signed the log using the information from the portable QTH."

I hope I don't have to go through the hassle of applying for another certificate for N7TY/1.

Station Location only refers to the global location...such as it's DXCC location, it's ITU/CQ zone or IOTA.

It has nothing to do with the /1

You must obtain a certificate for the /1
but it's real easy, you don't have to apply and wait for the postcard.

Got to the tQSL Certificate program and under File, choose New Certificate request.
Fill it out, and make sure you list the location correctly for where ever in Maine you were.
(Personally I love Lincolnville to Acadia myself)

upload it via the Upload applet and you will get it back via email.

But with holidays it may be next week.
Then....upload all your qso's with the N7TY/1 callsign.

This is the same system we qsl managers use, once you have your original certificate, you can use that as your bone fids to apply for others.

Stop at the Lobster Pound in Belfast, it's the best.
Even Martha Stewarts says it's the best...
but don't hold that against them. lol

Also that resturant (name escapes me) across from the Belfast Inn.
they have great food, make their own beer, and ice creame.

From: Bob Nielsen
Topic: 2504 Message: 2504

Has anyone been able to get TQSL to work on a Macintosh running OS X version 10.4.3? I had it working once (after several remove/ reinstall iterations) but I messed something else up later and now I can't get it to work, If I load a Cabrillo or ADIF file, I get through a few screens but when I click on "file to write to", the program dies. Any ideas?

Bob, N7XY

I know it's no help, but just so you know you're not the only one, I haven't been successful getting TQSL to work in Tiger, either.

I keep hoping that Steve Palm, N9YTY, who did the tQSL port for the Mac, would come up with an updated version that would work. It hasn't exactly been a secret that Tiger broke it.

I found that the output file name is kinda sensitive to the number of
spaces and periods in the file name. Try it with a shorter name.

I downloaded this today, and I couldn't find the + beside the callsigns that are with LOTW. I joined the reflector for AR and found your note (below). Was this now fixed and nobody on that reflector updated it? If its fixed, can you tell me what to do? I'm not going to do a sh/dx manually to see if they are LOTW registered or not.

Thanks,

Scott

Thanks Lee

I thought I was keeping up to date with ARU and didn't understand the discussion.
I'd use it if it was available.
Especially in contests, if I have a choice between two multipliers, I'm going to work the LoTW user first.

As a beta tester for LoTW...the more qsl's I make that way the easier it is to test.

And I'm still holding out for that multiplier blinking request.
In SS, you see spots come in for a multiplier but too big a pile to bother with at the moment.
Later you want to find that spot in ARU and you go blind trying to scroll back and find it.
So...my idea if possible, be able to right click on that YT multiplier spot and choose 'blink till turned off' type choice.

This world work foz state/provinces and zones also.

Take care and thanks for all the xmas gifts in the way of ARU enhancements you've sent this year.

Stay warm....it's 44F here, a veritable run around in shorts and wash the car type day....

In spite of the name, Lee's software will work with DX Spider as well
as AR clusters (Lee actually runs both).

After you download and install the packet program you have to click on the "update button" to bring it to the latest. Then download the LOTW users text file into the same folder as the program. Under the set tab select "show lotw" and it should work. The text in the online help file shows how to set it up.

Good Luck, Trav, WX0Y

Here it is, 2006, and there's still no WAS award module. Last I heard, it was expected at the first of the year.

Having WAS would be a boon to the LoTW program.

Unbelievable! The doors at Headquarters haven't even been open
in the new year and already the complaining begins.

Like most organizations, ARRL have been closed for nearly one week
out of the last two. In addition, the Board have still not allocated
any additional programmer time to LotW ... all programming is still
being done by one person whose primary duties include IT support for
all of the business and publishing functions.

I am also disappointed that WAS is still not implemented. But, then again, the ARRL would have more resources if all the tight-butt, anti-ARRL whiners would join the ARRL instead of constantly complaining about it. Not referring to anyone here that is a member of this group of course, just all the whiners in the newsgroups that constantly complain about the ARRL. People hate the ARRL because they are supporting no-code. People hate them because they support the code. No matter what the ARRL does anymore, half the hams are bitching about it. I've never seen anything like it in my life before. Well, I'm a member and proud of it and like what the ARRL is trying to do to save and promote amateur radio.

So I offer this little prayer of help:

"Dear God, please help the ARRL implement WAS in the LOTW. Also, help those that constantly complain about the ARRL see the error of their ways and help them to join this fine organization - AMEN!"

Happy New Year!

Duffy

2521. Uploading (.tq8) files

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-03 15:10:27 UTC
From: Al Fenwick, WB3EBA
Topic: 2521 Message: 2521

I am just getting started with LOTW, and have uploaded my logbook to the system. All OK so far. I did my logbook in Access so had to write a VB program to convert entries to ADIF. OK here too. My logbook is now on LOTW and I have received a cuppla confirmations. However, In December I uploaded some new entries and got the message from LOTW that the .tq8 file was queued for processing. It has been a week or so now and I do not see the new entries in the log with the rest of them. How long should this process take? It may be that this is Christmas time and things are naturally slow. I have read somewhere that there is only one support person in Newington for LOTW, and maybe he/she is on vacation.

Anyway thanks for any info anone can give me.

Happy New Year All!

Al WB3EBA

2522. WAS

Yahoo group: ARRL-LOTW (2003 — 2007)

Topic: 2456 Message: 2522

Hello All

I am a relatively new member of this group but I know exactly how many states & counties I have confirmed. I download a report & make a LoTW log in my station logger.

I am a member of the ARRL & the RSGB & believe me the RSGB gets the same stick at times. The fact is that you can have no point of view if you are not a member of the organisation. I am sure that they will get round to WAS as soon as they can. I would like to see the day when awards from many different national radio societies can be counted but it will take a long time. What we should do is promote LoTW as much as we can.

Now my query. I see reference to cluster software, which I don't use, flagging stations which are members of LoTW. Where do you find a list of people who are using LoTW?

All the best for 2006

Dave, GM4HQF G-QRP #2513
Aberdeen

Are you sure the additional uploads were not duplicates? You should
see the number of log entries increase fairly quickly.

The processing normally happens automatically and you can see the
results within a few seconds. If you do not see the entries after
this long, I suggest that you resubmit them. I have seen new QSLs
during the past week, so it appears that the system didn't break
down--HOWEVER, I have been unable to connect to it since last night,
so there may be a problem currently.

Try sending the .tq8 as an email attachment rather than loading from the webpage. If you have a formatting problem, you get an email back with an error message.

Just be sure you don't wait until after the certificate(s) expire (I learned this the hard way). I didn't get a reminder and had recreated my .p12 files because of the Linux issues with version 1.10 and they had a later date than my certificates, so I didn't think of renewing in time. W7NG at ARRL was able to get me straightened out, but it would have been much easier if I had renewed in time.

2532. Updating .TQ8 files

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-05 02:24:54 UTC
From: Al Fenwick, WB3EBA
Topic: 2532 Message: 2532

OK Guys, Thanks for the info on why my .TQ8 was not loading. As you suggested in one of the messages I had two certificates on disk; the old dead one and the new one I requested to replace it. Removing the old certificate, re signing the ADIF file and re submitting did the trick.

I was pretty sure that the format of my ADIF file was OK. When I finished the Convert to ADIF program I tested it by uploading to both eQSL and LOTW (as a signed .Tq8 file) and the file was accepted by both.

I think I will enjoy LOTW, but I still intend to send QSL cards.

Well we are trying to renew our certificate but I think we have a problem. We followed the renewing in structions and uploaded it last knight. This morning we received an e-mail which had attached the new certificate so we followed the instructions to install it. Now when we open the TQSL cert we have TWO certificates listed. The first one is the old certificate and the second one is the new certificate. The red mark over the icon for the new certificate is not there now which I thing is a good thing.

My question is should I hve both certificates list in the TQSL cert window? If now how do I correct this?

Art,

Not a "biggie"!....

Simply put your mouse pointer over one of them....right
click...click on Properties...note the expiration date of the
certificate...

Do the same for the other certificate...and note the expiration
date...

Whichever expires the earliest...right click and delete....

Happy New Year...

Hi Lou,
Thanks for the asnwer to my question. The only problem now is I deleted the new certificate instead of the old one. I guess I have a mess now?

Art,

Not a "biggie"!....

Simply put your mouse pointer over one of them....right click...click on Properties...note the expiration date of the certificate...

Do the same for the other certificate...and note the expiration date...

Whichever expires the earliest...right click and delete....

Happy New Year...

2540. LOTW Kudos

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-09 04:39:48 UTC
From: scottpa1960
Topic: 2540 Message: 2540

The ARRL RTTY Roundup ended at 7:00 pm local time, and within 10 minutes I had my log emailed to the ARRL, and the .adi file submitted to LOTW. Four hours later, I have confirmations of almost 12% of those I worked in the contest. I think thats pretty good for only a few hours ago. Kudos to those who have uploaded their files already. Four of those were from other countries (Canada-2, Italy and Puerto Rico).

2545. Quick Question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-10 21:47:47 UTC
From: scottpa1960
Topic: 2545 Message: 2545

Back in October I requested my old callsign of WY3X after holding the KN3A call for the past 2 years. I already have the file for the WY3X but since its now reissued as of today, do I need to do anything more? I can't remember if I said the WY3X was only for the years 1993 to 2003 or something. I just want to make sure I get my new qsl's confirmed on LOTW under the new(old) call.

Thanks in advance,

Scott-WY3X

You should be able to go to the certificate and either right or left click on it and it should tell you for what period it was issued.

Date range per callsign is required for each
certificate.
Current callsign has a future expiring date.

Thanks for the information. I clicked on it and discovered it was set
to stop when my KN3A was issued in 2003. Now I submitted the request
for WY3X to start on 1/10/06, which is the issuance date. Now I'm
wondering if I won't ever receive QSL confirmations from the years
1992 until 2003 that I was previously licensed as WY3X.

I don't think that will be a problem. If I were to upload some log entries one of with the call kn3a and it matched a QSO that you had uploaded for the same call you and I would get a match. Once the information is uploaded it doesn't go away because you changed calls. However you would only get a match for the period in which you owned the call. No problem.

2555. LoTW new WAS

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-17 15:16:23 UTC
From: Bob Daniels
Topic: 2555 Message: 2555

I'm very happy to see WAS is now a part of LoTW.

I have a question though. I have had two calls in my Ham Radio life. My current Call K8KWT and my former Call WD8KWT. Both have been operated from the same general location. Three seperate QTH's all in the Grand Rapids, MI area. (all easily within about a 5 mile circle). I would like to include both calls in a single LoTW WAS account. I can't figure out how to do that. I can and have created seperate accounts for each call, but it would be nice to tie the calls together.

Has anyone figured out how to do this ?

Thanks
Bob K8KWT

First off, you must have a certificate for that previous call.
And have uploaded qso's for that time period on that certificate.

IF so
Under the awards module, you must create an account.
It would be K8KWT (I'm assuming).
Then go to the RULE and create a rule that accepts qso's for K8KWT and WD8KWT.

That will link both callsigns to the same WAS account.
After that, you will see the states that are eligible to be credited.
some will be for one call and some for the other.

good luck.

2557. after 40 years

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-17 16:53:31 UTC
From: FireBrick
Topic: 2557 Message: 2557

I've got my account, I've linked all my callsigns to that account.
I have enough WAS LoTW qsls for the award and (whatever individual endorsements there are).

So after 40 years of hamdom...I'm finally going to apply for WAS .....next month. hihi

....the tagline below was randomly entered when I started this email, but seem amazingly appropriate.

There is a very fine line between "hobby" and "mental illness."

I ran into that also, but it's back up now. I needed to do a bit of configuration, but ended up with 42 states already confirmed (without any sweepstakes or field day log submissions). Hopefully IOTA and other awards will be added soon.

Yes, I've got 49 states Mixed showing. I'm hoping that when they get
the application part of WAS going next month they'll also have the
ability to link to already-earned WAS, like DXCC does, as I've already
got the Mixed, CW and Phone WAS.

Bob,

It doesn't care about the call ... just create a rule that
selects all QSOs in the one county and you will have them.

2563. Correcting Grid Error

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-18 00:59:44 UTC
From: VA7CAB
Topic: 2563 Message: 2563

Hi everyone,

When I first started LOTW in 2004 I had incorrectly signed my uploads with the wrong Grid Locator (CN89KD). If I upload some adi files with the correct Grid information (CN89JG) will all be OK? This is just to set the record straight for WAS (which is totally cool by the way!)

On a related note, does anyone know if there is an overlay for Google Earth that shows grid squares?

Thanks for any help!

2564. Existing WAS Account - How?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-18 11:32:31 UTC
From: Beischel
Topic: 2564 Message: 2564

I do have an existing WAS "account" as I have a "mixed" WAS award. If I set up a new account,how can I get it to link to the "old" WAS account? With DXCC I was able to do this, but not sure with WAS as it only specifies a "new" account creation. I would like to go for WAS now with "all Phone" or "all CW" or by band, etc.

I've noticed that stations that signed <callsign>/125
during the Maxim birthday celebration are not
uploading their logs with the /125 suffix. I had
uploaded all these callsigns with this suffix.
Can I now go back and reupload these callsigns without
the /125 suffix?

This doesn't appear to be implemented yet. I'm in the same position, already
having Mixed, Phone, and CW, and am working on single-band and 5BWAS. I'm
hoping linking to already-earned WAS will be implemented along with the
application functionality scheduled for next month.

Yes you can.
Maybe someone can clue me in on this..
I freqently see callsigns on the cluster that do NOT reflect the callsign being signed by the operator.
For Instance: I hear a station signing J3/W9OL, that is the way I post it on the cluster, but some people will post it the other way, W9OL/J3.

I know about the International convention but my question is....If the station is signing a certain way, why do some people correct/change it?
Do some clusters NOT accept it accept with the Country/callsign or callsign/country.

Reason I ask is if the station is signing one way, it's most likely that will be the way he submits the qsos to LoTW which will not match if you submit the qso with the opposite convention.
I wonder how many qsos are not matched or have to be resubmitted?

Yes ... brings to mind a recent operation the station
was signing callsign/6y5 but alot of places had him listed
6y5/callsign

I entered him in my log exactly how he sent his call, and got a
confirmation in both LOTW & Eqsl.

Yes. You'll have duplicates as LoTW provides no way for you to delete a
QSO, but that doesn't keep the newly uploaded QSOs from matching.

It's been up and down a couple of times since Tuesday.

When I could get on, I determined I have enough QSLs for Mixed and
Phone was, and just lack two states for CW and 20m WAS.

I was recently in Newington; don't get the idea the League has a "bunch" of folks working on LoTW. There is one guy, I met him, and his assistance who is also the W1AW station manager. Most of the staffers wear more than one hat.

In any case, the new WAS feature is great! Thanks LoTW.

2574. LoTW WAS, ND needed

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-19 13:42:11 UTC
From: Art RX9TX
Topic: 2574 Message: 2574

Hello ARRL-LOTW,

Any ND resident here? That is the last state needed on the LoTW to
complete my cardless WAS. K0NZ, K0QQ, K0VX, KE0A, K0EVZ, N0OJ, N7IV
- no one of them partaking in the LoTW, unfortunately.

I was recently in Newington; don't get the idea the League has a "bunch"
of folks working on LoTW. There is one guy, I met him, and his assistance
who is also the W1AW station manager. Most of the staffers wear more than
one hat.

In any case, the new WAS feature is great! Thanks LoTW.

It's been up and down a couple of times since Tuesday.

When I could get on, I determined I have enough QSLs for Mixed and
Phone was, and just lack two states for CW and 20m WAS.

2576. A thought about WAS

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-19 13:56:37 UTC
From: pcooper
Topic: 2576 Message: 2576

Hi all,

I have just been looking at my WAS status on LoTW.

Obviously, you need to search the database of received QSL's so that you can select the needed States.

BUT.... the problem is that you CANNOT sort by State, only callsign.

For the LoTW team... Can you add an extra search box for WAS so that it is then possible to "sort" the matching QSL's by State?

Otherwise, many thanks for adding this!

There is no problem with uploading your WHOLE log, it will just take longer.

But...uploading your whole log will result in it overwriting the old qsls for yourself and your contacts.
The people you previously worked and have received a LoTW qsl will now received a new one.
Again it's not harmful, but could be extra online time for those with dialups or pay-by-minute type connections.

Of course a correction should always be uploaded.

One funny glitch/bug in LoTW is that the 'number' of qsls shown in the log on screen will now show you as twice as many qso and qsls if you upload the entire log.

I only upload new qso's since my last upload. Just quicker.

just my personal preference.

You got it.
I assume their logging programs do not have the capability to select only 'not uploaded as yet' qso's.
I think most of the more state of the art Logging Software have that capability.

As does TQSL - It asks for a date range to be signed. And as all
contacts have to be signed using it, why isn't that function used ?
[especially as you have to go past it]

Even if your software doesn't keep track of QSO's already sent to LoTW. All the User has to do is click on the "Most Recent QSOs" button in "Your QSOs" to see the last QSO's uploaded by date. Unless your submitting logs out of order you can just pick up where you left off without resubmitting QSO's.

Right???

Bob K8KWT

2587. Re: [ARRL-LOTW] Re: Multiple QSL hits

Date: 2006-01-19 21:17:32 UTC
From: FireBrick
Topic: 2582 Message: 2587

Yes, using the date range in the 'signing' process would eliminate re-uploading the same qso's.
I suppose you would have to keep a record though and as forgetful as I am...I'd never find the safe place that I put the note with the last group that I uploaded.

So I rely on my logging program to mark as 'submitted to lotw' for me and then subsequent selections only include qso's since the last upload.

yes that would work...of course by the time I closed that window, opened my logging program and went to the selection process.....I'd have forgotten that last qso date/time. :-(((

Does that then make to number of QSO's the LOTW page shows incorrect
because many are dups?

There are 2 or 3 calls that keep showing up when I do a download.

You got it.
I assume their logging programs do not have the capability to select
only 'not uploaded as
yet' qso's.
I think most of the more state of the art Logging Software have that
capability.

I 'think' and am prepared to be corrected, that the QSO count is what
you upload.
So, if you start at zero, and upload 2,500 q's from a contest, the
total shows 2,500 if you upload that lot again, total will show 5,000.

Am not going to hypothesize on the QSL stats.

Yes, I'm pretty sure that resubmission of qsls results in your totals being numerically out of kilter.
No big thing except like in my case where I have numerous stations I manage and put their logs onto LoTW...:-) that really inflates the numbers.

2592. RE: [ARRL-LOTW] Re: Multiple QSL hits

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-20 00:00:58 UTC
From: Joe Subich
Topic: 2582 Message: 2592

Not so ... if you upload the same batch twice, they will overwrite
the previous batch and your "number of QSOs" will not change.
However, if I am operating mobile and upload a batch of QSOs as
W4TV/4 and later upload them again without the /4 (in case someone
did not log the /4), then the "number of QSOs" will double.

Similarly, after uploading logs for one of the stations he manages
that results in a "QSL" for me Bill forgets that he uploaded the batch
and does it again, the date on my QSL will change (it will be back on
the top of my "new QSLs list) but the number of QSLs will not change.

The simple rule of thumb is: if the QSO is identical (same call, same
date, same time, same mode, and same band) it will REPLACE the previous
QSO. If the QSO is different in any of the key parameters, it will be
added to the list.

Hi Joe,

Does this mean I could correct a grid error by uploading the contact
again?

No, the software will select them automatically. You don't need to
actually select them.

> BUT.... the problem is that you CANNOT sort by State, only callsign.
>
> For the LoTW team... Can you add an extra search box for WAS so

That would be good.

We could add sorting by DXCC entity while we're at it.

Exactamundo!

The odd thing is, you can use TQSL to specify only a certain date
range, even if you start with an ADIF for a whole bunch of QSOs, you
don't need to upload any but items qualified by a date range.

I think some guys are just lazy and continue to upload everything.

I'll answer my own question! I tried and it works. It corrects the
grid square issue and doesn't increase your QSO count.

Yes, you should be able re re-sign the "bad" QSOs with a corrected
"Station Location" in tQSL, upload them again and they will replace
the "bad" records.

Thanks Joe,

You also have to make double sure the exact start time is correct
(along with band and mode data. I had to upload a contact twice
because an import from Logger32 into DX Keeper had the start time off
by 3 minutes!

Only 3 out of sync on LOTW ... not too bad!

Hi Art,

yes I am in the same boat. I have 9 contacts for ND 3 are in your list. Hopefully this will change as WAS is only getting going on LoTW

Hi all,

I am new to this LoTW stuff and thought watching what people had to say on here might be a good idea.

Not that at present I am having any troubles. When I first started to read about LoTW and how it operated it seemed daunting but like most things if you work your way through it's not that bad.

Anyway I'm hooked and I'll try and get a few more ZL's to support it. I'm going to think something up for my profile on QRZ touting my support for it.

In that regard you probably seen the other post about ND for WAS. I hope to be up on the ARRL International DX CW contest next month. Maybe some of the guys in ND who support LoTW will come up, that would be great.

One comment I would have to make at this time is often I cannot connect to the LoTW site and often it is slow. Is this common? I wonder how many hits it is getting in a day from users? Certinly when I was uploading my log there were some others uploading significant numbers too.

Good DX every one.

Don't hold your breath for IOTA. The RSGB is no more willing to share its award with anyone else and they have always insisted on cards being submitted. They haven't even become as flexible as the ARRL's field checkers for DXCC. I think you'll see the CQ awards long before IOTA. But that's just one mans opinion. I think WAC will also beat the others.

From: edctexas
Topic: 2564 Message: 2602

I would not count on this happening soon. At some point in past history, HQ didn't have computerized records for WAS or DXCC awards. I would bet that this is even more true for WAS. For older DXCC QSOs, I had to resubmit cards to prove the band/ mode credits. They knew I had the country verified, but had no record of the band/mode and callsign. I don't know this for sure. If you retained copies of the award submission, you might be better off. Of course the more recent submissions do have records there. Also remember that all QSOs need to be from within 50 miles of the same QTH. I moved after 5BWAS so I'm starting over again. Lotw will make it much easier. I only need VT and DE on two bands to have two band WAS on RTTY.

From: J. Hamann
Topic: 2603 Message: 2603

Anyone using Scott's ACL logging program. I cannot upload my log to LOTW. I know my password and user name is correct because I am able to upload through the ARRL web site. I suspect the path is entered wrong. What path to TQSL do yiu use?
Jim
K2CBM

2604. WAS & WAC

From: Dave Lindsay
Topic: 2604 Message: 2604

I am using LOTW to try for WAS QRP. I still need 8 states, the usual suspects, but I will get them eventually.

I am very pleased with LOTW but if they introduced WAC my joy would be complete. It will happen someday for sure.

Thanks to everyone involved with LOTW for doing a great job & as the chap in ZL said we have to keep spreading the news around.

Dave, GM4HQF G-QRP #2513

I have several recommendations for this. First of all, you should join the ACLog yahoo reflector, as the people are very helpful, and if you post a problem with ACLog, usually within minutes there is an answer, and many times its from Scott or his wife personally.

Link: http://groups.yahoo.com/group/N3FJP_Software_Users/

You can visit his website at www.n3fjp.com and look on the left side for ACLog, within that page near the bottom is the help file for ACLog in PDF and MSWord format.

Here's the PDF link: http://n3fjp.ky1v.com/ACLogGuide10.pdf

I'm not sure why this was posted on the LOTW site but I sure hope this helps you arrive at the answer.

From: Joe Subich, W4TV
Topic: 2604 Message: 2606

After WAS ... Jon (KE3Z) indicates there is more coming ... WAC should
be very easy. The logic is nearly identical, the number of "items"
are not as great, and the restrictions aren't as tight. I would guess
the WAS module could be modified for WAC rather easily.

From: FireBrick
Topic: 2610 Message: 2611

In the past, certificates that I requested for previous calls and stations I manage, were practically automatic.
I do not know if they were computer generated automatic though.

LoTW is in the midst of software updates since last week so that may be a factor.

2612. More about WAS

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-22 13:36:55 UTC
From: Phil Cooper
Topic: 2612 Message: 2612

Hi all,

I spent a good while this morning sorting through the verified QSL's for WAS and I am now up to 49 confirmed on LoTW. The only State I am missing on LoTW is Montana, although I do have the paper cards.

Both DE and OK are hard too, as I only have ONE confirmation of each State on LoTW!

2614. Essential Files?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-22 16:39:54 UTC
From: Jerry K3BZ
Topic: 2614 Message: 2614

What are the "essential" files for my LoTW installation? I mean the files/folders I should back up, so I could recover from a hard disk failure? Also, is there a procedure for re-installing LoTW, certs, etc on a new hard disk?

73, Jerry K3BZ

2615. RE: [ARRL-LOTW] Essential Files?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-22 18:01:56 UTC
From: Joe Subich
Topic: 2614 Message: 2615

Jerry,

The easiest and best way to handle a hard disk recovery is to
create a *.p12 file for each certificate as soon as you load
the new certificate. Store the *.p12 files in three places:

1) in My Documents (simple for quick restores)
2) on a CDR or floppy in your file cabinet (off line back-up)
3) on a CDR or floppy in your safe deposit box (or other off
site storage).

With the *.p12 file(s) you can always do a completely fresh install
of tQSL and reload the *.p12 file. There is no need to keep any
other files/directories.

73,

... Joe, W4TV

I might suggest one more safe place.
Buy one of those cheap USB 'Stick Drives'.
Even the small ones will usually also store your entire LogBook.
I did as Joe suggested and just keep the 'Stick Drive' in a desk drawer.
Occasionally a cdrom or floppy written on a misaligned drive can be difficult to restore from.

I figured there was a simple answer... thanks, Joe.

I would download tQSL again from the ARRL LoTW website, and while installing that I would be prompted to insert my backed-up *.p12 file and recreate my current working situation, is that correct? I suppose I would then do that for each of my callsign certs...??

Jerry,

The easiest and best way to handle a hard disk recovery is to
create a *.p12 file for each certificate as soon as you load
the new certificate. Store the *.p12 files in three places:

1) in My Documents (simple for quick restores)
2) on a CDR or floppy in your file cabinet (off line back-up)
3) on a CDR or floppy in your safe deposit box (or other off
site storage).

With the *.p12 file(s) you can always do a completely fresh install
of tQSL and reload the *.p12 file. There is no need to keep any
other files/directories.

73,

... Joe, W4TV

You won't get prompted during the install. What you do is to install
TQSL, then when the install is finished you run tQSLCert. You then
import the .p12 files using "File", "Load Certificate File".

That would be a nice tool to have.

I was wondering what criteria does LoTW use to determin what state a contact is good for? Is it from the records that LoTW has on where that station was operating from at that time? I'm fairly sure this will be the answer as that would be the most reliable.

If in deed that is the case then the mentioned addition to the search criteria would be very usefull because unless the other station tells you at the time of the QSO what state and county they are in, it can be difficult to determin later. QRZ lookups are no good as they only tell you the last information entered into them. Which can be completely wrong.

Qdos to te LoTW team for what they have done to date. I'm impressed.

When a user uploads a log, he has to sign it with a certificate. As part of that process, he selects a station location. This is the location that is recorded with the QSO.

While I've only had to do this for the stations I manage.
I 'think' you can do this for each batch of qso's you wish to upload.

In the TQSL 'signing' process, go to station, choose 'edit locations'.
Select the callsign you wish to edit.
Click on the call and select edit.
Click on next.
If you were operating from a state other than normal, enter it there.
Same for the county.

That will sign all the qso's that you are uploading so make sure you have ONLY selected the correct qso's.

And remember to change it back or to a different state if the next batch is different.

Arh yes that makes sence Bill.

So as I suspected being able to seach by county in the LoTW data base would be very accurate.

See I may very well have cards for ND but unless the state was entered into my log record I can't search them out.

Chances are that I don't have any anyway because when I receive a card I usually enter as much extra info as I can from the card into the log.

I'm not too bothered because untill the feature came up on LoTW I wasn't even thinking about WAS. But all this has peaked my interest again.

Especially with mixed, CW and 10m sitting on 49. Going to have to work harder on SSB, sigh.

Hello All

Got OR confirmed for my 43 state. Still need AR, HI, MS, ND, NV, UT, WY.

When I last got WAS with 100W around 25 years ago the hard ones from here were the Dakotas & MT. Seemed to take a long time to get a card from DE for some strange reason. I probably have most of the missing states confirmed QRP via the buro but I am trying to do it all via LOTW.

You certainly need a bit of patience with 5 watts & no sun spots!

I don't believe the statement that 12mtrs doesn't count is correct. 12mtr QSOs do count for WAS awards, unless you are trying for a specific band endorsement. I don't believe that a specific endorsement for 12mtr exists (at least my current rules don't show it). I don't see any thing on the ARRL website either. I'll check with the awards desk and see. I do field award checking for the central texas area and have done numerous WAS apps, some with WARC band QSOS. So I think your good to go.

73 Ed KE3D

Quote from ARRL WAS award rules:
Two-way communications must be established on amateur bands with each state. Specialty awards and endorsements must be two-way (2X) on that band and/or mode. There is no minimum signal report required. Any or all bands may be used for general WAS. The District of Columbia may be counted for Maryland

Last check the LotW cert process was not automatic. The process
still requires manual intervention so it will take a business day for
anything to happen. They are pretty fast for US calls and some DX
calls. The harder the license datat is to check the longer it
takes! I wish more DX guys would join up. It would be easier on
them and easier on us. I think you'll get it in a day or so.

2627. Now this is a tad funny about LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-23 22:59:14 UTC
From: FireBrick
Topic: 2627 Message: 2627

I realized during a conversation that although I had worked a few Division Directors, Vice Directors and ARRL staff, that I hadn't seen many LoTW qsls from these operators.

So I searched my logs.
Of course these gentleman may operate at stations not using their own calls.
Or these gentlemen may be operating bands or modes that I do not.

Of the Four Vice Directors I've worked half have not submitted to LoTW
Of the Three Directors I've worked. Only one matches a LoTW qsl.
One Director is in my log many times as he's a frequent contester...but not a single LoTW qsl.
Even W1AW, that is in my log quite a few times, (contests), only resulted in 1 LoTW qsl.

So what can be gleaned from this? I have a poor signal and no VIP would waste time working me?
Or my log is really full of busted calls?
Directors are too busy fighting BPL and tweaking the proposed band plans to operate?
Vice Directors have more time to operate and consequently more able to upload to LoTW?
W1AW logs were lost in Katrina???

Or is my sample too small to be meaningful? (Which I hope is the reason)

Only one division has Director/Vice Director in my log and in my LoTW qsl confirmations.

Criminal Lawyer is a redundancy.

Similarly, you'd think that the IARU HQ stations would submit their logs. I worked a bunch of them during the IARU contest this summer. I think only one or two submitted logs to LoTW.

There were even guys from my own contest club who manned an HQ station in Costa Rica, where I need confirmations. I worked them on three bands. I contacted one guy, who told me to contact another fellow who was handling the QSLs. His response? "Gee, we've never done that before."

FY5KE just posted some needed logs this weekend. I think it's catching on, but it sure is slow.

Gee Barry, shame on me, I never thought to look.

I have a bunch of K1ZZ qso's and LoTW qsls also.

Now does that mean he's 'committed'?
or does it mean that being the boss he has the most free time on his hands? :-)))0

No W5JBP qsos or qsls though.

It is easier to get forgiveness than permission.

Just done a 'Find Call' and see that K1ZZ was last updated to LoTW
on 01-01-06 whilst that for W1AW was on 01-23-06! However, whereas
my 2 QSOs with K1ZZ for 1997 and 2000 are in, my only QSO with W1AW
(2002) is not.

I wonder if the inputting of the W1AW log to LoTW is left to the
guest operators to do 'their bit' and that is the reason for the
somewhat sporadic credits with this call? If this is the case, then
perhaps it needs an 'update before you leave' rule - but who gets
the job of uploading the logs prior to LoTW going on line? :-)

WAS - 49 worked/confirmed by card and 37 by LoTW - where are all you
guys from KS?!

I'm not sure that Guest Ops at W1AW can upload even if they wanted to.
I have to use a password to get to my W9OL account.

I'd bet the person in charge of W1AW would not like to give out the password.

Always willing to share my ignorance...

Hi all,

Just wondering.......

I am now missing just one State confirmed on LoTW, but I do have paper cards for that State.
Will LoTW be able to handle a "mixed" award, ie paper plus LoTW?

And it would appear that some sort of State search would be useful, as I have something like 4000 contacts confirmed with W on LoTW, and searching by pages of 25 is somewhat laborious!

I operated W1AW in October of 2005 and no, the guest operators do not upload to LOTW. More than likely the reason being that they did not have time. While I was operating, there were other operators waiting for their turn so hence there just was not time for each person to upload. There is more than one operating station there (perhaps 3 or 4 I don't remember). Each one is in a seperate glassed in booth and there is only one control operator that has many additional duties.

I recently calculated some statistics from my logs on LotW. LotW is improving but its very slow. For 6000 Qsos from 1979 to 2001, I got on 3 LotW QSL versus 1000 or more paper cards. From 2001 to 2002, there was 254 Qsos with 7 LotW QSLs. In 2002-2003 period, there were 309 QSOs with 10 LotW QSLs. For 2003, I made 412 QSOs with 35 LotW QSLs. So for the earliest period less than 0.1% hit rate. The next two years hover around 4%. 2003 jumps to 8.5%. The last year with 1375 QSOs had 316 LotW QSLs for a big jump to 23%. So the participation is growing.

It is an interesting point raised that we don't see more LotW activity from League officials. I'll have to mention it in future correspondence and talks with the Gulf Division and other ARRL officials. Its a good point! Promote the system! BTW I just wrote an article encouraging LotW usage for several local club papers.

Things seem a bit weird. I have uploaded over 12K in Q's and my QSO count shows 9150, with 1816 QSLs.

From all of that, I only have 7 Mixed Q's listed for WAS???

Hmmm,

Ed,

I haven't looked into it as well as you but I would say my
experience is fairly similar with my log back to 1983.

I have noticed also that contest QSO's have the best LoTW QSL rate.
I guess this is because the contest guys are already fimiliar with
exporting stuff from there logs and sending it off.

This brings up another point, it is not only the acceptance of LoTW
it is also getting people into computer logging. The guy who runs a
paper log is never going to upload it to LoTW.

I have come across resistance to computer logging because they don't
feel confident. Once you get them going they usually admit they
would never go back.

2640. Simple way to say LoTW?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-24 22:54:03 UTC
From: John
Topic: 2640 Message: 2640

Often when DXing on the bands the other station will request pse QSL via buro (I'm talking CW contact here).

Has any one come across a polite but short way, and kind of standard of saying that's ok but my first prefference is LoTW? I have posted a message to this effect under QSL manager for my listing on QRZ.

It would be great if there was a simple universally understood way of making this point in a QSO without being wordy about it.

Don't get me wrong I love receiving all and especially some of the beutifull QSL cards and always return with my modist card via the same method but if LoTW satisfies the requirement then cut the crap and let it do the bussiness.

By the way, just a thought. Have you checked that your QRZ listing is still accurate lately?

I simply have a rtty and cw buffer.
"I qsl 100% via LoTW once a week".

The other party either says, 'no computer, no electronic qsl, or thank you'.

Likewise, my Data QSO's have the tag 'QSL Sure via Buro and LoTW'

On SSB I tend to just say the same thing.

Referring to another thread -my own return rate on LoTW is just 6%
I would agree that the 'bigger' contest boys are looking at higher
rates - G6PZ for instance is hovering around 14% with 3 band DXCC so
far. [95,000 Q's submitted]

Hi agn guys, probably getting sick of me so ill make this my last post for a few hours. :)

I see some discussion about increasing the awards that LoTW will support and this is obviously desirable.

One of the points made is that different organisations who have awards will not wish to loose control of their award program and I can understand this.

What I think needs to happen is kind of like how the money system has developed, it is kind of similar.

Money was invented so that we didn't have to exchange the real goods for things that we wanted.

This QSLing thing is kind of the same. At first we used paper cards as proof that we had a QSO with another station but now we are developing another way.

Just like money there needs to be checks in place to prevent counterfeit and also make sure of it's value/accuracy so that other people/countries will accept it too.

Now I'm no expert but ARRL seems to have developed a pretty good standard for their system. What if that standard was formally defined so that others could set up there own QSO data base and that checks were done to ensure the standard was being adheared to.

Then each organisation could confidently share their data base QSO information with the others and they could all manage their own award programs.

This would have many benifits to all by insuring the continued success of this new QSL system. Every one would be happy with the QSO information because everyone is using the same standard and each organisation can manage the burden of their own award program.

Sorry if this has all been said before. Don't get angry just hit the delete button.

No it would be better like this.

If you want to operate W1AW you will provide the holder of the certificate for W1AW with a suitable electonic log so that he alone can manage the uploading to a central data base or LoTW.

Perhaps they need volentairs to convert paper logs from the past into a suitable format, perhaps this is why there are blanks.

Personally myself I have seen this conversion process so unreliable that it would be better not to do it. Just make sure it doesn't continue.

I do this with any activity I am involved with. If you can't provide a log electronically, then you don't operate if I have to manage it after.

2646. Opt-Out of Yahoo "Web Beacons"

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-25 19:13:34 UTC
From: Jerry K3BZ
Topic: 2646 Message: 2646

Here's something that everyone should consider....

While it doesn't send any SPAM or porn or sell e-mail addresses to lists,
please be aware that the Yahoo privacy policy you signed up to when
you joined Yahoo allows Yahoo to use "Web Beacons" to monitor your web
travels so they can gather demographic information for the advertisers that
support the "FREE" YahooGroup service. They don't single you out... Yahoo
does
this with every Yahoo Group user... UNLESS YOU OPT-OUT. I have done so
myself
and I encourage every YahooGroup member to do the same.

Here's how to do it:

Go to this website: http://privacy.yahoo.com/privacy/us

About half-way down the page, in the section on cookies, you will see a link
that says "web beacons".

Click on the phrase "web Beacons." On the page that opens, scroll down to a
paragraph entitled "Outside the Yahoo Network."

In that section you'll see a little "Click Here" to Opt Out link... click on
that, and you are done! (Be carefull not to click the next button that comes
up... that will UNDO the opt-out, and opt you back in...)

IMPORTANT NOTE:
You only have to do this once no matter how many YahooGroups you belong to,
because it opts your computer out, not you. However, if you have more than
one computer, like a laptop and a desktop, you need to do this on
eachcomputer.

It might be helpful to pass this notice on to others that you think
mightbelong to a YahooGroup.

73, Jerry K3BZ

2649. LoTW boken?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-26 16:42:01 UTC
From: Vince
Topic: 2649 Message: 2649

I have submitted some contest downloads this year, and when I sign in to LoTW it looks as the downloads are ok, (the QSO numbers increses by the number of contact submitted), but when I go to check "Your QSL" the number of QSL that are shown changes to a lower number of QSL, as well the number of QSO, It looks to not be updating my information since the first of the year, and when I check "Your Activity", it is not showing the last contest downloads that I have submitted. The last contest download it shown, was from last year. Also, it is showing a date of 1-11-06 when I checked it on 1-25-06. From what I am seeing here, is LoTW is broken since the first of the year, anyone else having this problem? It has worked for the past year 1 1/2 years, If this is going to be a problem that I can not rely on LoTW, then I will consider not entering any more downloads in the future. I plan to send this information to ARRL, and see what kind of answer I get from them, I have been giving it a bit of time to see if it would correct it self,
but it does not look as if it is going to.

Vince, K6BIR

You need to set up a WAS award account.

Log into LotW, select the "Awards" tab, and you'll see where you can
set up your WAS award account.

Hope this helps.

What kind of state search are you looking for?

I went to LotW, logged into my account, selected the Awards tab, selected my WAS awards account and there was a list of categories and my credits in each.

From there, you can select an award category (i.e. "Mixed"), select the radio button that says "All Entities" and you will have a list of all 50 states and the callsign you worked for each confirmed state. The unconfirmed states will have the callsign field blank.

A quick, easy way to see what states you need.

Hope this helps.

I went to the ARRL LoTW Awards page and was immediately puzzled by "Account Name". Do they want my callsign? Or something like "WAS on 15M"? Or what? No examples are given.

Likewise, a "QSO Set" and a "Rule"... no examples are given. It's much easier to understand something new like this if examples of "typical" situations are given, so the user may infer what to do from them.

Another question: I have two previous callsigns but all QSOs were made within the mileage limit... so what account or accounts would I set up to combine them? My goal is WAS on each band on SSB and each band on CW... do I set up a separate account for each band? For each Band/Mode?

Maybe I'm just dense (my XYL says YES!!) but the instructions on the website beg more questions than they answer. Has anyone come up with a step-by-step procedure yet?

Yes John, that is great but what I think people want to know is what stations they have worked in a state that don't qualify for a QSL in LoTW. Then you can encourage that person to upload the QSO data to LoTW or get a paper QSL.

John,

Logbook of the World has no way to know what state a station you worked was in until that station has uploaded his logs! The state information is contained in the "Station Location" data that tQSL adds to each QSO record when you "Sign" the log prior to uploading the data.

Until a station uploads logs, LotW knows no more than you do about the QSO.

Sorry, but am I reading the above correctly ?

I know, from my log [w-eqf] exactly who I have worked in which State
and whether it shows in LoTW or I have a 'proper' QSL Card,or have no
confirmation.

Once I have a State confirmed, either way, I'm not then bothered
whether the other 287 stations I have worked in DE upload their logs
or not and it is surely not *my* job to chase them.

The mileage limit for DXCC was dispensed with many years (20?) ago.
The only requirement now is that all QSOs be made from within the
same DXCC country.

Hi Joe:

You are correct for DXCC.

However for WAS which the poster was inquiring about there is a MAX
limit of a 50 Mile radius from your location.

Same 50 Mile distance applies to the VUCC Award.

Once you exceed the 50 Mile limit, you must reset your awards to zero
and start over again !!!

Same thing applies to your STANDINGS for the VHF/UHF/SHF bands.

Ummm how does "w-eqf" know which state they were in? Unless they
told you during the QSO there is no way to know for sure. I guess
the FCC data base would be resonably accurate, but they may not have
been at their home QTH. Of course LoTW will not know either unless
it is told.

Not a biggy for me I just keep enjoying making QSO's, sooner or
later one will fill a gap.

And some people haven't bothered to include state information when
they sign their logs. I've noticed several confirmations I have for
the USA that don't have a state value. N6HC is one I remember.

How can that imply a 25 mile radius Joe???

I would say that the rule dictates a maximum separation distance of 50 miles between the two locations (new and former), which should be equal to a radius of 50 miles.

Draw a 50 mile radius circle around the former QTH and if the new one falls anywhere within that area, one should be ok for WAS.

Please correct me if I got this wrong!

It's whatever you want it to be.
The problem is the WAS rules. You can't combine QSOs if they're made from different locations more than 50 miles apart. So, you've got to come up with criteria to select what QSLs should match a particular WAS application. The set of QSOs from a set of locations that meet the rules are called a QSO set. To make the system work, you've got to set up an account for each location, then define a set of rules to allow LoTW to select the QSOs that match that location.
The name of the account doesn't matter. If all of your QSOs are from the same location, use your callsign. If not, you'll need multiple accounts.

For an example, I have two US callsigns and one DX. All the domestic QSOs are from the same QTH. I set up two rules - one with "Callsign not GU0/WA1SPT" for the US, and "Callsign is GU0/WA1SPT" for the DX. That's it.

>Another question: I have two previous callsigns but all QSOs were made

One account if all the QSOs are in the limit. Then set up a rule to select everything and Bob's your uncle.

2668. RE: [ARRL-LOTW] WAS??

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-27 14:09:08 UTC
From: Joe Subich
Topic: 2648 Message: 2668

Carl,

The rules say that no two locations may be separated by more than 50 miles.

You can consider it a 50 mile radius if you are only dealing with TWO
locations. However, add a third location and the circle into which
all three locations fit must be no more than 25 miles radius.

Put another way, if all three locations are on a single line, the two
"outer" points may be separated by a maximum of 50 miles.

73,

... Joe, W4TV

Subject: Re: [ARRL-LOTW] WAS??

How can that imply a 25 mile radius Joe???

I would say that the rule dictates a maximum separation distance of 50 miles
between the two locations (new and former), which should be equal to a
radius of 50 miles.

Draw a 50 mile radius circle around the former QTH and if the new one falls
anywhere within that area, one should be ok for WAS.

Please correct me if I got this wrong!

Bob,

The question said DXCC.

However, in response to your point the WAS rules say that no two
locations my be separated by more than 50 miles. That implies a
25 mile radius.

From: Jerry Keller
Topic: 2648 Message: 2669

OK, I think I get it now. As usual, I was making things too complicated. All I have to determine now is the proper wording for expressing the "rules". Thanks, Rick (and the others who answered)

>Likewise, a "QSO Set" and a "Rule"... no examples are given. It's much
>easier to understand something new like this if examples of "typical"
>situations are given, so the user may infer what to do from them.

It's whatever you want it to be.
The problem is the WAS rules. You can't combine QSOs if they're made from different locations more than 50 miles apart. So, you've got to come up with criteria to select what QSLs should match a particular WAS application. The set of QSOs from a set of locations that meet the rules are called a QSO set. To make the system work, you've got to set up an account for each location, then define a set of rules to allow LoTW to select the QSOs that match that location.
The name of the account doesn't matter. If all of your QSOs are from the same location, use your callsign. If not, you'll need multiple accounts.

For an example, I have two US callsigns and one DX. All the domestic QSOs are from the same QTH. I set up two rules - one with "Callsign not GU0/WA1SPT" for the US, and "Callsign is GU0/WA1SPT" for the DX. That's it.

>Another question: I have two previous callsigns but all QSOs were made
>within the mileage limit... so what account or accounts would I set up
>to combine them? My goal is WAS on each band on SSB and each band on
>CW... do I set up a separate account for each band? For each Band/Mode?

One account if all the QSOs are in the limit. Then set up a rule to select everything and Bob's your uncle.
-Rick

The answer on 5BWAS is the same rulle applies. All 5Bands need to be from within the 25 mile radius (if more than two locations) and no more than 50 mi apart. Hey guys, spend more time working them than arguing the rules! You'll have more fun and after all the awards are only a game. 73 Ed KE3D

I think your asking if you can submit LoTW AND paper qsls at the same time.

Yes you can. It's called a 'Hybrid Submission'
The instructions are on the LoTW website.
Select the LoTW qsls you wish to submit and in the submission process it will ask if your also submitting paper qsls.
On the Paper form that is used, there is a box that asks if you wish to combine these paper submissions with a LoTW submission.

I've done it for my last 4 submissions.

Good luck.

I wonder if you can do a hybrid submission if you take the cards to an official ARRL card checker. We will have a hamfest in Orlando Fl. In two weeks and I intend to take a stack of cards and have them checked. I would also like to get credit for about 10 LOTW countries.

you can either mail the paper qsls to the DXCC desk or have them checked by a Field Checker.
Same thing applies, when you go to a Field Checker, the same form has that box in upper right side asking if this is to be combined with a LoTW submission.

The Field Checker will check the cards and forward the paperwork to ARRL where it will be combined with the LoTW submission.

You can submit paper QSLs along with LOTW QSOs but as I found out you have to also pay a $10.00 application fee for each endorsement, so it might be better to wait until you have more cards to submit.

Dear FireBrick,

Thanks for your email, but at this point I have NOT actually received your message because I have implemented a challenge-response based anti-spam solution. Before I can receive your message you must respond in ONE of the ways outlined below.

You will not have to do this again.

REPLY TO THIS MESSAGE

Simply reply to this email message ensuring the subject of your reply contains the subject of this message. When your reply arrives I will receive your ORIGINAL message and all FUTURE messages.

Or as an alternate method follow these instructions:

CLICK ON THE URL

Visit the following URL and follow the simple instructions. When you do this I will receive the message you sent and ALL future messages.

http://66.189.153.222:8081/?key=1eb7868e.43de84f9.0137145a

If the above URL does not appear all on one line, copy and paste it into your browser's address bar.

PLEASE NOTE: If you receive an error message when attempting to visit the above URL, it is very likely that your network is not allowing you to visit my confirmation page. If this is the case, contact your network administrator for help, or contact me by telephone.

If you do not respond within 7 days, your message will be DELETED and I will not be able to receive messages from you in the future.

I apologize for this small one-time inconvenience, but I have been forced to implement this challenge-response based anti-spam solution to eliminate 100% of the spam I receive, and it really works!

To learn more about the software I am using to stop spam, please visit http://www.Zaep.com/. Zaep has stopped 100% of all the spam

messages I was receiving every day.

Thank you,

WC7N

2682. LOTW - Some signings done without State

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-01-31 04:07:59 UTC
From: Bill Coleman
Topic: 2682 Message: 2682

Since the WAS award went into effect, I've noticed there are several people who have signed and uploaded logs, but have failed to include a state. A couple of them signed a lot of early logs with the state, but in recent ones, the state field was blank.

I wonder if this a bug in TQSL that causing this problem.

To check this out, just list your confirmations for UNITED STATES OF AMERICA with a wide-open WAS account and see.

If someone has this problem, a polite e-mail may bring results. I've e-mailed a couple of people to let them know, one has fixed the problem, the other decided it was too much trouble to re-sign and upload logs.

Keep and eye out for this.

From: FireBrick
Topic: 2682 Message: 2683

I did as you said Bill.
And my results were quite different.
I chose to have them shown with earliest qsl date thinking that the first submitters may have missed the State entry info in the signing process.

After going through many pages all showing the state I quit and then tried it with the more recent qsls first.
Again I quit after going through many pages, all with the proper state indicated.

Now my results may have been skewed as most of the qsls are from contest qsos and frequently the state was part of the exchange.

Now I do notice that frequently people do not know the proper name/spelling of their county/parish etc.
Especially Alaskans (they really don't have counties per se) and MO. And I might suggest they compare what they think is the proper spelling with the official County Hunters list.
This can also occur due to portable operation away from home and unsure of the correct spelling.

But to me these are minor and easily correctible in my logging/award tracking software.

But I will watch for this.

2684. Question about logging into the LOTW website

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-01 03:07:32 UTC
From: scottpa1960

Hi all, this is not a big deal, but my login to the LOTW website is my old callsign (KN3A). I was on looking for a way to change it to WY3X as the username. I don't want to mess things up because I finally was able to link both accounts together last week. Is there an easy way to correct this? Again, its not a problem either way.

2688. LoTW Abnormalities

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-01 05:15:44 UTC
From: R Johnson
Topic: 2688 Message: 2688

I've got an 80M "WAS" confirmation on LoTW, which gives me 8 States !!!

But both "MY" records and the "LoTW ADIF Download Report" show it to be 9 QSO's on 80M/States.

For some reason my "CT" QSO with N1NG is confirmed, but not listed in my WAS Account, which should bring it up 9 Sates confirmed.

I also have a 23Cm QSO that shows a freq. of 432.1 instead of 1296.1 !!!

I guess that all of you might want to give ALL of your "WAS" contacts VERY close scrutiny !!!

I'm sure all of these discrepancies will be resolved if we do our part and check our LoTW results very closely.

if a station forgets to include the state info he was in when he signs the qsos he's uploading, you will not get credit for it.
It would be the same as a qsl card that doesn't say what state he was in.
the same goes for 'county', 'cq zone' & 'itu zone'
(I know those awards are not available, just used as examples)

Every time you sign ADI file before sending it to the loTW, you are
asked what "station location" you want to be used when creating the
*.tq8 file.

Tqsl - Station - Add location.

Click on Recent QSL's and then click on Details. It will show the
state for both stations as part of the information about the QSO.

Also, there should be a file on your computer with this information
(at least if the certificate is active). On Linux or OS X, it is
~/.tqsl/station_data but is probably something different for Windows.

I think I asked the wrong question before.

I recently trashed my HDD and replaced it with new. Luckily, I had backups of most of my stuff so I could do a clean install of windows XP and all my stuff, which took a while but went smoothly.

I was under the impression all I needed to back up for LotW was my .p12 files for each cert, so I have those.... in fact, I have a copy of my entire Trusted QSL folder that lives in Program Files.

But somehow, I've lost my certs. How do I go about getting them back? Or do I have to get new ones?

I wouldn't mind getting new ones, because it will give me a chance to re-new (I must be over due by now... how long are they good for?).... PLUS.... I need to get TWO certs for one previous callsign (instead of the single one I had) to cover QTHs in two different states.

I know this is complicated, but if someone could just point me in the right direction?

One thing you may have trouble with is renaming your accounts. I was told that for some indeterminate period I would need to have the Callsign on the account remain the same. This has something to do with joining or linking the DXCC accounts. Presumably, the Was account doesn't have the same problem. Of course this is only an inconvience since no one but you and ARRL can see the account names anyway. Just a comment from someone who has changed calls recently.

Jerry,

If your certificate is over a year old it is expired.
Here is the straight scoop on renewal right from the LoTW web site. This will get you ONE new certificate for your primary call. Once you have that you can use it to create the other certificates you may need for old calls, different states you may have lived in, etc.

73,
Chris, AC?M

Dec 29, 2005: Renewing your certificate after it expired. --

Forget to renew your certificate before it expired?

Don't feel alone. You can't renew an expired cert, but if you have an old postcard password, you can quickly obtain a NEW certificate. Here's what to do. First delete all .tq5 and .tq6 files that may still be in your machine. Also, make sure there are no certificate lines in TQSLCert with your callsign. Next, create ONE new certificate request and send it to lotw-help@... along with an old postcard password written in the TEXT of the message. If you don't have a postcard password, you will need to send the request to the server (lotw-logs@... or upload) and wait for a new postcard password.

Jerry,
Load the TQSL/Tcert program. Then in the cert program there is a pulldown menu item that will ask if you want to load a .P12 file. Loading the .P12 will reinstall the lost cert if it is still valid.

Look at the menu items. I think its file load certs. When that dialog opens it will let you load a "brand new cert" or a .P12 "old file". Hope this helps. Sure is frustrating to reload a HDD.

If your certificates have expired, the .p12 files won't work (I found this out the hard way). I couldn't figure out what to do and had to contact the ARRL by email to straighten it out (Wayne Mills was quite helpful, however). I notice that on the LOTW login page there is now a new notice, which may be of help to you:

Dec 29, 2005: Renewing your certificate after it expired. --

Forget to renew your certificate before it expired?

Don't feel alone. You can't renew an expired cert, but if you have an old postcard password, you can quickly obtain a NEW certificate. Here's what to do. Hi Bill:
Maybe I express the problem clearly, or you didn't understand what I said.

My 80M QSO with W1NG in CT IS confirmed by LoTW. All station information
is complete, and obviously the "QSO Time" matches or it wouldn't be
confirmed by LoTW.
It's "QSO Detail is:
Record ID 50667501 Received: 2004-09-16 00:46:29

The problem is that the QSO wasn't applied to my WAS account to give me
9-80M/States. WAS shows only 8-80M/States confirmed.

My 23Cm QSO that shows a freq. of 432.1 instead of 1296.1 is:
Record ID 10540235 Received: 2003-10-07 23:11:41

Again, keep your eye on what LoTW reports and check for discrepancies.

I have reported this LoTW.

ok what is 'commonly' the problem when a state does not show up as selected to be credited is that some other qso is already selected for that band/mode.

now you can change that...just put a check in the box for that qso in the 'your qso's' module.
That will remove any other qso that may be in the credit list.
This happens when someone uploads their logs and didn't realize that qso during a time frame where in a different location. or a simple type like IL instead of IN.

as for the frequency anomaly.
first check that the adif that you sent had the correct frequency/band. if so...the other person probably clicked on the wrong band.

practically all the anomalies we have been reported on this reflector.....where operator input errors.
I know, I made most of them myself.

Thanks, Bob.... as it happens, I discovered my certs don't expire until next month, so I have time to renew therm. I'm all set now, thanks to you and the several others that responded. This LotW reflector is a good thing.

If your certificates have expired, the .p12 files won't work (I found this out the hard way). I couldn't figure out what to do and had to contact the ARRL by email to straighten it out (Wayne Mills was quite helpful, however). I notice that on the LOTW login page there is now a new notice, which may be of help to you:

Dec 29, 2005: Renewing your certificate after it expired. --

Forget to renew your certificate before it expired?

Don't feel alone. You can't renew an expired cert, but if you have an old postcard password, you can quickly obtain a NEW certificate.

Here's what to do. First delete all .tq5 and .tq6 files that may still be in your machine. Also, make sure there are no certificate lines in TQSLCert with your callsign. Next, create ONE new certificate request and send it to lotw-help@arrl.org along with an old postcard password written in the TEXT of the message. If you don't have a postcard password, you will need to send the request to the server (lotw-logs@... or upload) and wait for a new postcard password.

I reported a similar problem and got a response from Wayne Mills about it. Turns out, LoTW is only designed to update ONE WAS account that matches the corresponding QSO rules.

So, if you, like me, had created several WAS accounts that have overlapping criteria, when the confirmation comes in it will only update one WAS account.

The fix for this is two-fold. First, delete any WAS accounts that have overlapping criteria. To update the accounts that are left, modify the QSO criteria, save, then change them back and save. When you change the criteria for an account, it will re-run the query for confirmations to see what the account status is.

This worked for me.

Something is wrong here....
Are you sure you created the account correctly
You can have multiple WAS accounts
and each account can have various 'rules'
for instance
I have an account W9OL
it's rule takes in all stateside qso's
I have another RTTY
it's rule accepts only stateside rtty qso's
etc.

2708. Minnesota qso party uploading question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-05 14:51:57 UTC
From: FireBrick
Topic: 2708 Message: 2708

In the rules it said that stations operating mobile must sign w0xx/county.

I logged them that way as that's what they were sending and otherwise WL would detect them as dupes.

My big question is.....how will these stations be uploading their logs to LoTW.
Will they request separate certificates for each of the counties they operated in?
Or
Will they just use their base call and sign each county qso's separately.
(which would be my first guess)
Reason for asking is...A couple will be new counties for me.
(I'm aware that LoTW has no affiliation with counties awards, it just for me.)

Please and thank you.

I tried sniffing Coke once, but the ice cubes got stuck in my nose.

From "Awards" select the misnamed WAS account -->
On the left side of the page select "Modify Account" -->
In the Yellow Bar that says "Your Logbook WAS Account (XXXXX)"
you will see a small "Delete this Account" option. Click that
and the bad account is gone.

Hi Gil:
If your referring to "WAS Accounts", can easily "Delete" them !

1 Select Awards
2-Select WAS
3-Select the "WAS Account" you want to delete
4-Select "Modify Account"
5-Look for the "Yellow Bar" at the top of the page saying:
"Your Logbook WAS Account (account name)
6-Click on the "Delete this Account" to the right of the above.
7-ALL DONE, GONZO !!!

I wish it was this easy with DXCC after you "Linked Accounts" !!!

73

2719. Viewing LOTW Awards

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-13 06:41:38 UTC
From: scottpa1960
Topic: 2719 Message: 2719

I have a quick question for the group.

Tonight I wanted to see how close I was to the WAS LOTW award. It shows I have 3 to go. I know ND, HI and NV are the ones. Is there an easy way to see what the unconfirmed states are from the LOTW website? I'm asking this as I see on RTTY, I have 43 states confirmed, but will have to verify the others manually. I know that ND, HI and NV are three of them, but not sure what the other 4 are.

I worked HI on RTTY today and he said he'll be sending his log to LOTW this week. If anyone reading this is in NV or ND and use LOTW, I'd love to make a quick sked. Once the LOTW WAS award becomes available, since I have a qsl card confirming ND, will that count?

Awards>select WAS Award Account>Account Credits>choose RTTY from the drop down menu and tick the button (All Entities)
Then click the 'Select WAS Award to View' button
All the states will be shown, and missing states will be evident as blank.

2722. New LOTW Kudo's

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-13 13:21:25 UTC
From: scottpa1960
Topic: 2722 Message: 2722

So far I have 56 LOTW confirmations back from the CQ WPX RTTY contest, which only ended just over 12 hours ago. Among those confirmed already are Alaska, New Zealand, Latvia and Israel. Its very encouraging to see other countries using LOTW now. I know that in the next several days as people upload their logs to LOTW I'll have a lot more confirmed. Prior to me adding the latest .adi file to my ACLog, my confirmed qsl rate was better than 1 in 4, and I know a year ago it was more like 1 in 7. Great news IMHO.

73--Scott
WY3X

2723. Nevada - North Dakota

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-13 23:11:15 UTC
From: scottpa1960
Topic: 2723 Message: 2723

Is there anyone in Nevada and North Dakota who uses LOTW that I can make a qso sked with for my WAS award when it becomes available? I can do it either SSB, CW, RTTY, PSK, Olivia or any other digital mode. Just a signal report exchange and u/l to LOTW. I've worked both states many times, but nobody has confirmed with LOTW. I can easily be reached at my email address listed here. I don't even want a paper QSL card, just LOTW.

Thanks!

Scott - WY3X

2724. Question ?

Yahoo group: ARRL-LOTW (2003 — 2007)

From: Jerry
Topic: 2724 Message: 2724

Hi All !

Still working on uploading files ... now at 6434 Q's with 861 confirmed.

Ran into problem with a couple of the .cbr files from TR, seems that I get message saying "missing contest file" while trying to convert it to TQ8. I looked at files and don't see anything weird.

Anyone want to venture a guess on this one ?

Thanks.

Jerry,

N9AVY

2725. Recent WPX QSL results

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-14 15:19:28 UTC
From: edctexas
Topic: 2725 Message: 2725

With 448 QSOS, I got 114 QSL hits. Thats about 25%. Unfortunately, the percentage when one examines the DX is not that good. With 110 DX QSOs, the rate sinks to just under 10%. This is an improvement from last year though. I wish we could get more DX stations to join the program. It would cut QSL costs dramatically. All of the big contest stations use computer logging so the only effort left is to get a certificate and upload.

Still I got two new countries and West Virginia confirmed via LotW which isn't too bad for 29 hrs. I would have more except I fell asleep from too much sleep lost with the FO-A, FO-M, and 3Y.

2727. LOTW Stats

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-20 22:39:59 UTC
From: scottpa1960
Topic: 2727 Message: 2727

A couple of weeks ago I worked the WPX RTTY contest. Of the 355 qso's, I had 130 confirmations, 1 in 2.73 confirmed, which I think is great. This includes 10 different DXCC countries. I'd say 1/3 of the confirmations on LOTW, 50% were confirmed within the first 24 hours.

This weekend I worked the ARRL Worldwide CW contest. Of the 307 qso's, so far I've received 5 LOTW confirmations from 5 different countries. What are the chances that I'll get a 1 in 3 return on LOTW? Sure would be nice, but for some reason it appears the RTTY people are more likely to use LOTW.

I'm curious to see how this all shakes out, but anyone else think that I won't see as good of a LOTW confirmation rate as the RTTY contest?

All I need is Hawaii for my LOTW WAS award when it becomes available. I sent an email to the HI qso I had over the weekend and asked if they use LOTW. She replied that she never heard of it(??)

There are, indeed, many folks who do this.

I don't happen to be one of them, but can respect those that do.

Hello Folks

I also uploaded my small log to LoTW after the contest. Never thought about waiting till after the log submission date. Lots of people must do it as I have 10 confirmed already as of last night. This included UT which leaves me needing 6 for WAS QRP. If I can browbeat the guy in WY to join LoTW, that would be another one!

You guys talking about missing WY got me curious, so I went looking
at my LotW WAS records.

I found that if you want to confirm WY on LotW, one _good_ resource
would be to work Bob, WG7Y. He's confirmed WY on five bands for me,
80 through 10. All of them were contest contacts, SSB and RTTY.

Hope this helps.

2738. Re: ARRL DX Contest

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-02-22 12:47:39 UTC
From: Dave Lindsay
Topic: 2731 Message: 2738

The WY stn I worked tells me that he thinks he will just stick with his traditional method of QSL'ing. I did tell him that LoTW would be much easier & more convenient for him. Of course it's his prerogative.

No doubt I will get the state confirmed sooner or later, I am in no hurry. It's all down to ham radio population in the individual states. I believe that DE & WY have a very small amount of radio hams. I remember when I first got WAS around 1980 the one I was stuck with was DE as it took ages to get a QSL. Strange but I already have DE confirmed on 10,15 & 20 with LoTW. Still need AR,HI,MS,ND,NV & WY. 1200 QSL's & not a bit of paper in sight. Bliss!

I will stop at 3 band WAS as working anything on 40 & 80 from this apartment is very difficult.

Here's a chance for all of us to get that elusive WY CW QSO, and maybe confirmed in LotW as well. I just found the announcement of a first-ever Seventh Call Area QSO Party to be held in May of this year.

<http://www.wy7fd.com/7th area_qso.htm>

Hope this helps.

From: Phil Cooper
Topic: 2731 Message: 2740

Hi all,

Well, WY isn't my problem! I need MT confirmed on LoTW. I have worked N9ITX/7, but never had a QSL card at all, despite several direct ones, plus I have worked a few others, but none are on LoTW.

Apart from that, I now see my confirmed total running at a shade under 21%, which is amazing.

Cheers for now

Phil GU0SUP

YeeHaa!

Worked 3 stations in ND in the ARRL DX contest, one was KD4POJ and
he says on QRZ he is good for LoTW.

Haven't uploaded my log yet, I just wait till after submittion cut
off, but Looks promising.

Hope I worked a few of you too, I had fun anyway.

73 John ZL1BYZ.

John,

I made a sked with Dwayne last week to confirm ND for LOTW myself. He was true to his word and uploaded to LOTW within a couple of hours of our QSO. I'm sure you'll definitely have ND confirmed with KD4POJ.

Very good Scott,

It's all a bit of fun. I had forgotten all about WAS and wasn't really fussed about DXCC. I signed up to LoTW to support the idea and for others benifit as much as anything, but it has now peaked my interest again. I find the whole thing facinating. For me I don't like paper work and if by uploading my information and someone else/machine does all the checking, that's a big plus for me. I can spend more time on the radio. Often when I am doing QSL cards I think "it takes longer to put the label and/or any notes on the card than the QSO took, especially if it was a contest or DX contact. I hope the concept will grow, I think it is a good one.

John,

I just wished more hams had the same attitude about LOTW like you do, as I've embraced it for the same reasons as you have. When I as an active ham in the 1980s and 1990s, this service didn't exist, and I recall how much of a pain it was to be writing qsl cards all day. I just put incoming qsl cards in a box (which has long disappeared). I worked a New Zealand station on 40 meters a couple of weeks ago on RTTY. The next morning after I uploaded my log and I had the confirmation from him. Now its a confirmed country! I never had to write a qsl card and its recognized for DXCC credit. You're also right, the on-air exchanges take less time than putting the paper QSL card together.

Thanks for the reply Gerry. I checked the list and didn't see my call. However since my DXCC endorsement application was handled by an ARRL checker on about the 10th of Feb and I don't see any entries after the 11 Feb I guess mine hasn't been entered as yet.

Do I understand correctly, according to the page you gave me, that those applications received on Jan 6th have been processed? In other words they have received their certificate/endorsement or it is in the mail?

Julio,

That's my understanding.

Right now they appear to be running 6 weeks behind applications received.

Keep an eye on the list and you call should appear there shortly after they receive the paperwork.

I didn't state that correctly just short of 5 million qsl records really means 10 million qsls.

Which is even more reason for Dave and Wayne to give a personally signed Certificate to the TWO people who create the 5 millionth match.

The only substitute for good manners is fast reflexes.

Hello All,

LOTW does not appear to accept Olivia as a valid mode. LOTW responds with an error message whenever I attempt an upload with an Olivia QSO included. I think Olivia's basically an error-correcting variant of MFSK. If so, should I change my Olivia contacts to MFSK before submitting them to LOTW? Conversely, will LOTW actually accept Olivia after all but it's just me that's doing something wrong that's causing the errors?

Please check the version of TQSL you are running. I believe there was
a revision that fixed this acceptance of Olivia. I have uploaded
Olivia QSOs and even received a QSL for one. When you log manually
into LotW. The first screen that comes up has news on the left side.
Scroll down and you'll find the announcement. BEFORE YOU INSTALL ANY
NEW VERSION!!! SAVE YOUR CERTS AS P12!!!

I apologize for saying the LotW had that info. I did receive that info on another yahoo group (DXLABS). You need TQSL 1.11 to be able to upload OLIVIA mode contacts. Several other ADIF 2 changes have been made. If your logger is not ADIF2 compatible, you could have some problems with other things. But the newest version of TQSL is the ticket. Sorry if you looked and couldn't find the blurb on the LotW page. I'll ask them to post a note next phone call with Newington. Goog luck with olivia. It really works down into the noise if you don't mind the slow pace of typing.

I am using TQSL 1.11. In fact, this is a brand-new computer, so I had to do the installation from scratch over the weekend. I think it's something in the config.xml file, but I haven't been able to trick it into accepting OLIVIA. It will accept OLIVIA if I map it to DATA, but I want OLIVIA specifically. Is there a newer config.xml file out there?

BTW, I've tried to sign the ADIF file using one-line ADIF file exports from both MixW 2.16 and ACLog 2.9. Both logging softwares are the newest version. After going through that, I tried simply creating the QSO using the editor from TQSL. It wouldn't do it.....kept saying Olivia was an invalid mode. Olivia does show up as a valid mode on the LOTW help pages on the ARRL website.

What am I missing?

Turns out that TQSL stores the "real" copy of its config.xml file under ..\Documents and Settings\...Application Data\TrustedQSL. I opened it up with a text editor and added a line for Olivia right under the line for PSK63. That made it show up in the picklist as a valid mode. I was able to sign the file without difficulty.

There's a much easier way to do that, which someone suggested earlier:
download the configuration file from the LoTW site.
Log in to LoTW, look for the "Nov 10, 2005: VO-52 satellite added" news
item, which has the pointer to the latest config.tq6. Download that,
open it with TQSLCert's "File/Load Certificate File" menu, and it'll
recognize Olivia. It may be a good idea to do that anyway. :-)

HQ1H via LoTW..for a 160 meter qso!!!
Thank you guys for the new one on 160 and the very quick qsl.

PJ2MI via LoTW...for a whole lot of qso's in a whole lot of band/modes.

Good judgment comes from bad experience and a lot of that comes from bad judgment.

Thanks, Rick!

Tried it, and it worked like a charm. It's a little
counter-intuitive, but at least I'll know where to look next time.

Too bad, I spent 2 weeks there over the holidays as N7TY/1 on RTTY and CW.
I am planning another trip there this spring, I will post a note to the
reflector before I depart.

J68RI via LoTW for 2 SSSB band/modes.
Thank you guys. \
(see, the rumor that I don't own a mic is untrue) :-)))
